Well, I wish it were so. The day started out at 3:30 AM with a request from the FAA to check the airport for a plane that had failed to close out it's flight plan. The plane was not at the airport. Just before 5 AM it was found about 2 miles north of the airport in a field, fire still burning. The pilot was killed in the crash, and his 24 year old daughter was ejected. She was hospitalized in critical condition with 3rd degree burns over 50% of body. Other incidents we would rather not give thanks for have been occurring all day. The latest, just given out, involves a woman apparently stealing from the Salvation Army drop box.

I have a 5/8 wave mag mount on the roof of my pick-up truck I have heard them several times. I programmed 143.625 into my ic-27A. I have also programmed 144.49 and 145.80 into my A&B vfos. Ilisten for activity on 143.625, and then try calling on the 2m frequencies.
I wonder who is going to be the first land mobile to ISS QSO?
Who is going to make the first H/T to ISS QSO?
I sure would like to read these sories here in the NG!

Message-ID: <MPG.14876b74ecd455939896ec@isp-east.usenetserver.com>
Source record: 75465

Hello people, I just watch the messages in this group but I did
come across some iteresting stuff on Ebay. While I have nothing to
do with the seller since it is "The State of Oregon", and I live in
Illinois, this seller is really the police that are selling stolen
equipment and lots of it are scanners and car stereos. Check out the
seller by the user name Oregontrails2000 as the seller ID on Ebay.
I just bought something unrelated to scanners since i have just
about everything anyway. I had to wade through 20+ of them to get to the
page with what I wanted. When they called to confirm the win, I asked
them what they get and they said "EVERYTHING" From Bear Trackers to AOR.
The great thing is that they start their auctions at 5 bucks or less and
never have a reserve since it's evidence and stolen property that the
police are done with in court and now it's on-line. I just thought that
since I monitor this group, I would give something to you. Gobble Gobble!

3166. Talking to the BC245

Newsgroup: rec.radio.scanner
Date: 2000-11-23 00:00:00 UTC
From: Doctor Jimmy <karenjim@monmouth.com>
Message-ID: <8vkkbu$96q$1@news.monmouth.com>
Source record: 75468
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'm sure this question has been floated about 1000 times, but here it is again:

Has anyone had success talking to the BC245 with a simple terminal emulator (Hyperterm or Procomm)? I cannot get a response from the scanner with Hyperterm. Yes, I've checked, rechecked, then checked again the settings).

The only weird setting is the stop bit. Hyperterm (and other Comm packages) don't allow you to add stop bits (only start bits).

Has anyone talked to their bc245xlt with a terminal program? Any tips and tricks appreciated!

Thanks,
Jim

3167. Scanner Freq's

Just moved to the Farmington, MO hour and a 1/2 south of St Louis. What I am looking for the the Talk groups ID #'s for the St Louis PD, FD, EMS, and County users. Also any ten-codes and signals used for this area including Missouri Hwy Patrol. Also looking for any additional frequencies for this area and the Belleville, IL.
areas as well.

Please note I have looked in the trunkscanner.com still and got what I good from them. I have a Pro-92 scanner. ver. 3.28.

Any help would be appreciated.

Thanks
Dave -ICQ 12552056

3173. Pennsylvania [Emergency] Situation Report list

Newsgroup: rec.radio.scanner
Date: 2000-11-23 05:24:15 UTC
From: PA-Sit-Rep <PA_Sit_Rep@yahoo.com>
Message-ID: <8vi9lvqja1@nnrp1.deja.com>
Source record: 75446
Cross-posted to: rec.radio.scanner,alt.radio.scanner

The purpose of PA-Sit-Rep is to keep all of our e-mail list subscribers up to date on emergency situations and activities of MAJOR import throughout the state of Pennsylvania.

PA-Sit-Rep is a free communications tool that will enable subscribers to monitor situations throughout the State of Pennsylvania including weather emergencies, natural disasters, environmental disasters, police and military activities (major emergency events and exercises only), civil disturbances and political developments (ONLY OF THE MOST MAJOR IMPORT).

List members are encouraged (but not required) to send reports to the list pertaining to any of the above activities. Because the PA-Sit-Rep e-mail list only permits posts to the list pertaining to Pennsylvania emergency situations of major import, the list is extremely low volume. List membership is made up completely of voluntary participants. The more subscribers we have, the more effective this valuable resource becomes.

PA-Sit-Rep may be of particular interest to individuals in the state of Pennsylvania who own wireless devices capable of text messaging. The list protocol is designed to accommodate these devices, which are usually either text capable pagers or Digital Cell Phones and are of limited message length capacity.

For more information or to subscribe, please visit the PA-Sit-Rep web page:
http://www.1stpa-militia.org/sit-rep.htm

Or you may subscribe by sending an e-mail to:
pa_sit_rep@yahoo.com

Put the word "Subscribe" in the subject line and the e-mail address you would like to have subscribed in the message body.

##
The PSR-Discuss list is now active! Its an open discussion email list which covers the PA emergency Situation Report list, emergency situations, survival tips and tactics, self defense, self reliance, emergency contingency plans, emergency communications plans, news and more... all for Pennsylvania citizens.

The PSR-Discuss list is an open e-mail list and posts are NOT limited to emergency situations. Only inappropriate posts will be moderated.

For more info or to join the list, go to:
www.1stpa-militia.org/PSR-Discuss.htm
##

>> condition Scout? New price is $349-00.

Joel,

I'm not sure I'd buy a used Scout.

In my opinion, it's a great frequency counter. But, I believe, the firmware was been revised over te years. And, at some point, the rechargeable battery will need to be replaced.

Rather than saving a few dollars, I'd buy a new one. Warranty, new battery, latest firmware.

Jeff Multer, Fort Mill, S.C., U.S.A.

3190. Question on PC's and scanners

Newsgroup: rec.radio.scanner

For years I've used a 2004 with the CE-232 interface and an old 386 notebook PC to control the scanner. While it works fine I know that eventually the 386 will stop working, it's 9 years old now.

It's heavy, not very portable, uses a lot of power (forget batteries, 45 minutes use at best). Does anyone use or know of anyone using other devices to control a 2004/ce-232 setup? Along the lines of a sub-notebook or Palm, Psion, palm sized equipment. Any scanning web sites have info about this?

I recall seeing palm sized PC's years back but never heard of anyone using it with the 2004. Anything that will run the DOS programs for the CE-232 is fine, any info would be appreciated, thanks.

>CE-232 is fine, any info would be appreciated, thanks.

Alas, the Palms, Psions, and "Pocket PC" devices do not have x86
processors and so can't run DOS programs.

(Oh, alright, to be completely correct, I'll say that they could do so
with the aid of an emulator. I never heard of a "SoftPC" or other
emulator for any of these devices, but of course such could exist.
However the CE-232 DOS app really expects to deal with a 25x80
character-mode display, so it'd be tough to use on any of those except the
Psion, and difficult there.)

As I see it, you have two choices, given that you want something not much
larger than a Palm or a Psion, and that you don't want to grind your own
software:

1. Find a CE-232 controller app written for the Palm, Psion, or "Pocket
PC" devices.

2. Get a used Toshiba Libretto. 50CT, 70CT, 100CT, or 110CT - any will do
for what you're doing. The Libretto 50CT (the first and weakest of the
series) came with 16MB RAM, a 70 MHz Pentium I, a 700 MB HD, and a 640x480
display (6.1" diagonal). It is about the size of a video cassette, will
run DOS and DOS programs, and will run rings around your 386 notebook.
The display and keyboard are quite small compared to a "real" notebook but
hey, they're larger than the Psion you were considering... and the
display, while small, will handle 25x80 DOS screens.

It will also run Windows 95, 98, ME, and NT4 (Windows 2000 refuses to
install on such a small hard drive, but with a HD upgrade (they will take
up to an 8 GB HD) even that has been done). A few maniacs are using these

in cars as mobile MP3 players (yes, sound "card" is built in), GPS moving-map displays, and so on!

Libretto 50CTs regularly sell on ebay for under $400. If you bid on one, be sure it comes with the AC adapter, "I/O bar" (gives you the serial port you need), and PCMCIA floppy drive. And be prepared for people to ask "that's not a REAL computer, is it?" (Yes, it is, HD and everything...)

>Has anyone talked to their bc245xlt with a terminal program?
>Any tips and tricks appreciated!

>Thanks,
>Jim

Hi Jim,

Yes, and it was extremely simply. One stop bit is normal, so
don't fret that. Are your _sure_ you are following the
instructions for putting the scanner in "Remote (PC Control)
Mode", page 70 of the manual? Also, make sure you have the
correct BPS rate. I believe there are some hints on the
StrongSignals site about how to talk to the scanner. These were
on the bc245xlt message board. The Uniden site has JPG images of
command docs for the bc845, which are basically similar. And
folks have said the Radio Shack Pro 2050 uses a command language
similar to the BC245 -- the Pro 2050 manual with detailed command
docs is on the RS web site.

I bet your basic problem is that the radio is not correctly in
remote mode. Otherwise, you should get at least gibberish even
with incorrect comm settings.

Good luck, and have fun!

Cheers,
Peter

Use what's known as a 7809 voltage regulator. When you look at it, and can read the number 7809, the pin on the left goes to supply, (12v). middle goes to ground, and right goes to your scanner (9 v), wire it up inside a 35mm film cannister, (keeps it neat)

OK...my error. I should have listed the specs and not assume everyone has a 2000 Radio Shack catalog. So I'll describe it right off the original box:

For Sale: RS Pro-71 handheld scanner. MINT condition. Not even a year old. Covers 29 to 54 MHz, 108 to 137 MHz AIR, 137 to 174 MHz PSB, and 406 to 512 MHz. Comes with DC auto adapter, four AA Nicads, duckie and original box and instructions. Nice Christmas gift! 100 channel. 20/15 steps-per-second. $65 and I'll pay for PRIORITY MAIL shipping. If you're short on cash and want to go through y ham/swl business with a credit card, we can do that for you. First e-mail gets it, or call me at: 1.517.563.2613

>do for what you're doing.

Thanks for the suggestion. I did look at ebay and there are quite a few available. I also stumbled on to the Jornada 680, 820 series. Any opinions on them? It might allow me to bargain better if I have more variety. As long as they both run DOS and have the 232 port, I have no problems. But it seems the HP item is cheaper for more bang, less interest in them or not as good a product?

The Radio Shack Pro-2067 seems to cover the three major trunking systems
and I think can do conventional and trunked networks at the same time.
AND, it's on sale right now @ $269.99.
So, now that it sounds SO good, what's wrong with her? Opinions? Thanks.

Regards,
Tony

Also, is it possible to monitor freqs using PL or DPL within the same bank?
I've been reading over the user manual off RadioShack's site and see you
must set the mode of the bank to be either AM, FM, PL, DPL, LT, etc......
so it -sounds- like you must separate the PL and DPL-using freqs into
separate banks. Correct?

Regards,
Tony

BC895XLT, Icom R2, Yupiteru MVT7100/9000, AR8200/MKII, ...

I can recommend 895 - it scans very fast (it is very important on such wide band...) and now is available for only around US$200!

Unidens BC 890 Base Station will cover that frequency span. These can be had for $150 or less used. For slightly more you can get a new BC 895 Base Station new. These will cover that freq range and have an additional 100 channels.

Tandy Pro -2006, with either an Optoscan 456 interface, or a CE-232 interface. Look for this on Ebay, You can put the interface in yourself, later, so this should not be a primary consideration. (The Opto 456, at least the newer version, wont do cell). The CE-232 will , though. Expect to pay anywhere from 250 to 500 , depending on condition.

3231. Best scanner/receiver for aircraft band

Newsgroup: rec.radio.scanner
Date: 2000-11-25 00:00:00 UTC
From: kontiki <whirlaway@mindspring.com>
Message-ID: <3A1FEB4D.247D4B34@mindspring.com>
Source record: 75384

Hi,

I'm working on my private pilot's license and just want to listen in on the Unicom traffic frequency at the airport (122.8). I can go down to Radio Shack and buy just about anything that will cover the 118 - 130 Mhz aircraft band, but I'd like something with slighlty better than the typical average sensitivity on this band...(something like at least 1uV). I'd also prefer something other than a hand-held.

Getting actual specs on all the various radios is not easy it seems... I just spent several hours surfing the net with little results.... seems like there are Unidens & Bearcats everywhere but few specs.... Does anyone have any suggestions/knowledge/ideas or links that you could pass along to help me find such a receiver?

Thanks,
Scott

Source record: 75392

Go to http://www.sportys.com/pilot/jd100/jd100.html. This is a handheld radio scanner, but it is designed specifically for the airband. It covers VHF and UHF airband frequencies only. I have never used one, but it looks like it would do what you want it to do.

The sensitivity is rated at 1.0&#65533;V for 6db SN (with 1KHz, 30% Modulation)

It is selling for $157.50 which seems reasonable to me. And hey, if you are a pilot, then you get entered into a drawing for a Cessna!

If you do buy one of these let me know. I'd like some feedback on how well it works.

Brad,

You can easily add a computer interface. Here's how:
http://www.qsl.net/w3xl/Programit/Pro2066.htm

Note that he opted to use an internal parallel interface which
required a hole for the DB-25 connector. For a few more
dollars, he could have used a Serial interface, which only
requires a hole for a 2 conductor connector, such as an
RCA (phono) jack.

Other examples of PROgramit installations:
http://home.cfl.rr.com/scan/PRO1.html

PROgramit kits:
http://home.cfl.rr.com/scan/PROgramit/PROgramit.html

Installation services:
http://home.cfl.rr.com/scan/Services.html

Have fun,

Robert

It's VHF freqs they're talking - the last two digits ahead of the
decimal and the first two after the decimal - a while back I
thought it was HF freqs, but never found them there, and figured
it was the partial VHF freqs, and I find them there every time.
The ones that threw me wer freqs like 127.825, which is
expressed as "twenty seven eighty two".

There's a 9-volt in the back for memory retention - change it
and see if it stops. Someone else suggested the PRIORITY
button (PRI) - that may be it, too, but I don't think the sound
would drop out. I DO think that a dead battery would kick the
audio out as you suggest, though.

Congrads! The reason you hear the ground station weakly - you're
monitoring a full duplex circuit with the ground on a different
frequency, but you're picking up the sidetone (crosstalk) of the ground,
probably through the astronaut/cosmonaut's earphone. Sometimes the
volume is so loud that you can easily copy both sides, 'cept it's in
Russian.

3262. 1st purchase: BC245 or IC-R2

Newsgroup: rec.radio.scanner
Date: 2000-11-26 00:00:00 UTC
From: Matt Lacey <mlacey@stanford.edu>
Message-ID: <3A217F70.BA13CC1C@nomorebelgianspam.stanford.edu>
Source record: 75248

Greetings all,
I've been lurking about 2 months trying to figure out which scanner
to buy. My must haves are:
1) handheld, 2) less than $250, 3) civil air band.
I'd also like:
1) military air band, 2) trunking.
However, I think those two are mutually exclusive in the <$250 handheld
category (correct me if I'm wrong).
I've narrowed my choices to the BC245 and the IC-R2 by looking at
strongsignals and other sources, though if anyone has any suggestions
I'd be open to other models. I was sold on the 245 until I considered
that I might want to listen to military traffic also. After reading all
of the glowing reviews, I'm more interested in the downsides of these
receivers. So if anyone has any difficulties they'd like to mention,
I'd appreciate it.
I also have two specific questions:
1) I'm wondering how much military traffic I might encounter in:
a) SF Bay, b) Houston, c)Northern Alabama
2) Why wouldn't I need a trunked scanner? Said another way, how
prevalent are trunked systems becoming?

TIA for your input and for having such a useful NG.

First, please let me appologize for the off topic message.

I represent a volunteer fire Department in Long Island, New York. I am in the process of writing specifications for a new ambulance. We are planning to include in these specs for a new GPS system.

Can anyone recommend anything? I really dont know much about it.

Any specific brands or features I should be looking for??

Please email me directly with any information, so I can present this information to the rest of my committee.

Thank You!

From: Piotr <bpiotrek@yahoo.com>
Message-ID: <xthU5.17304$e61.874900@news20.bellglobal.com>
Source record: 75253

Currently I have BC895XLT and Icom R2.
Icom R2 is very nice pocket radio - the receiver part is surprisingly
good as for radio of this size :-O But it scans/searches slowly.
BC895XLT searches bands very fast (225-400 MHz in 100sec
with 25kHz step). It also traces Motorola I, II and IIe. However
it is considerably bigger than R2 - not a handheld at all. But the new
price around $200 is VERY interesting :-)))

In general there is not too much traffic in UHF air band -
unless there is some show, exercises or war.
If you are interested in this particular band buy fast scanner
and recorder - I guess it wouldn't be very exciting to wait all
day for 3 short messages ;-)

Right now all big cities have problem with communication
systems capacity. trunking systems allow to utilise existing
capacity more efficiently. So if you live in big city you may
expect some trunking system in your area.
It seems that the most popular trunking systems in N.America
is Motorola I and/or II. In Europe the most popular is EDACS
(AFAIK).

I hope this helps a little.
Piotr

I had a coupla radios with Mil band, but didn't listen to it that much
after all. Trunking, though, has made a major change in the way I
scan.

> I've narrowed my choices to the BC245 and the IC-R2 by looking at

>that I might want to listen to military traffic also. After reading all

I love my 245. Perhaps you could borrow a friend's mil-band radio for
a week, and listen to that band exclusively. If you like it then get
a radio with milband. If it's no big whoop, grab a 245.

>2) Why wouldn't I need a trunked scanner? Said another way, how
>prevalent are trunked systems becoming?

In the Dallas area a good amount of the Public Service (PD, FD, etc)
is trunked).

Don't forget to take doppler shift into account. At the start of a
pass listen on 143.630, at mid pass 143.625 and near the end 143.620.
You'll get used to switching fairly quickly.

To Dan "Consumer Reports" Conti,

He's selling it with an N100 Notch fiter and the DB32 antenna. The
filter is $99 and the antenna is $29. So actually, Opto sells this
stuff new for $477 according to my calculator. <G>

Can't we all just get along?

The sensitivity is not very good, it is prone to paging intermod on VHF-HI so you have to enable the attinuator in that range. Other than that, it's a good radio.

When I saw your post, I went out to the car and got my 2067 and
brought it into the shop to make some measurments with my
military Measurements signal generator.
Low and high band (all I could check with this generator are
within the published specs which are very good. Squelch sensitivity
is as stated on both bands (signal level required to break squelch).
UHF band seems to be within specs of my other 5 various
scanner radios judging from a very weak signal from a point to point
relay on 457.325 which I am receiving off a side lobe in another
county. No way to check 800 mhz but I hear Durham NC city
trunked from 30 miles away with simply a cellular moble antenna.
I would say the radio is well within specs, and intermod and
interference is what I would describe as normal for a triple
convergence receiver. In fact, on low band, I would say the
squelch sensitivity is better than most breaking at .3uv and
readable at .2uv
Rod

This also happened in North Carolina:
How about shutting down the Charlotte Airport for "3" hours because a "Security Checker" failed to stop and check a bag that had a plastic gun in it. Yes, a plastic gun was discovered inside a bag that the security checker failed to stop, open it and check it out only as a toy. That situation closed the airport down for the entire "3" hours. No planes were permitted to land or take off, the airport was locked up, no one was permitted to enter or leave, all bags that were at the terminals were re-checked again. That's when the police found that this item in question was a plastic toy gun.

This situation happened on Tuesday 11-21-2000 while thousands were trying to get away on their holiday trips.

Well, if you can live without the attenuator set for frequencies in the VHF-HI, then it is fine; I can't. I live 10 air miles from the World Trade Center and the paging on 152.000 is killing me. I can't use the radio for my local PD unless the attenuator is on which reduces the sensitivity.

I know he is. My point was to merely show that a NEW unit isn't much
more then what he is asking. Yes, the accessories are a bonus, but we
MUST remember that the equipment is USED!

3303. For Sale CTCSS board for Pro 2045, BC9000, BC8500

Newsgroup: rec.radio.scanner
Date: 2000-11-26 00:26:26 UTC
From: mhpd913@aol.com
Message-ID: <20001125192626.20894.00001578@ng-fc1.aol.com>
Source record: 75310

I have for sale a CTCSS tone board out of a PRO 2045 that I have already sold and no longer have a use for the tone board, it will also work in Uniden BC 9000 and BC8500.
Will sell for $30.00 including shipping. E-mail if interested.

Message-ID: <elq02tgq8gd83pnk5b4qksk28o11fmtpe9@4ax.com>
Source record: 75311

Here's something to consider this if you have any thoughts of getting a new computer: The WinRadio card is (as far as I know) an ISA card, and it's getting real tough to get a computer with an ISA slot.

Does anyone know of an ISA to PCI adapter? Is it even possible or feasable?

Bud

3305. FS: Optoelectronics Scout Model 40

Newsgroup: rec.radio.scanner
Date: 2000-11-26 03:23:14 UTC
From: Greg Ottria <gottria@home.com>
Message-ID: <Cm%T5.468935$i5.8220548@news1.frmt1.sfba.home.com>
Source record: 75312
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

I have a Scout model 40 for sale. Unit is in great condition and comes with the DB32 stubby antenna. Here are some of the specs from the Optoelectronics website:
10MHz-1.4GHz frequency range
Records and saves 400 unique frequencies
Records up to 255 hits on each frequency in memory
Records frequencies automatically and unattended
Patented Digital Auto Filter and Auto Capture
All frequencies are automatically saved and can be deleted by pressing the clear button
Recall Mode: View all 400 frequencies and number of hits stored in memory
Custom ten-digit LCD display
Automatic EL backlight for night operation
16 segment RF signal strength bargraph
Distinctive beeps indicate frequency hits, and pager style vibrator for discreet recording
Supplied with NiCad batteries
AC charger supplied, for 10 hour recharge
Download memory into a PC using the optional OptoLinx universal interface
The Scout will automatically tune the following receivers: ICOM R7000, R7100, R8500, R9000, IC R10, AOR AR2700, AR8000, Radio Shack Pro 2005/6 with Optoelectronics OptoScan456, and Radio Shack Pro 2035/42 with Optoelectronics OS535. BC245 using SmartLink.

I also have the N100 FM Notch Filter that is included.

Asking $325. Plus shipping.

The 895 xlt must have original antenna,manual and preferably the box. It must be like new! We can ship the
same time. This 2005 is a 10 on cleaness,8 on the light,9 on cosmetics,10 mechanically.

Tony,

If that were true, you couldn't get AM air freqs. in the same band as VHF or UHF FM traffic. Mixing modes is no problem (except in trunking systems - I accidentally left 1 frequency in a trunk system set to EDACS, while the rest of the band was Motorola type II, but it didn't stop following the properly ID'd type II frequencies) in conventional scanning.

Regards,

Doug Gavilanes
Garden Grove, CA.

Just heard International Space Station on 143.625 (07:17-07:21 UTC) as it passed over the United States. First time for me, I was absolutely amazed. Didn't even use much of an antenna and had a nice signal for about 5 minutes. Also got a nice recording into a .wav file, its all in Russian. Also heard a very weak second station (ground) but I could not make it out clearly.

Check this URL it will be passing over
http://spaceflight.nasa.gov/realdata/tracking/index.html

Happy listening,
Brandon

Ive got. got it at a closeout sale for $300.
I has a few more internal noise problems (birdies) then an external scanner
and you have to be careful about routing your antenna cables away from the PC.
That being said it works just fine. Although the "Controls" look kind of like a
scanner
it truly is more of a scanning all band radio. you have to KNOW MORE
about communication technology to use it efficiently. If you can afford it.
I'd personally go with the external model, (less noise problems).

Hope that helps a tad...

My radio shows it's off frequency too after just a brief warm-up. It is worse in the 800 MHz band than in VHF-LO. If you get the info privately, please pass it on to me.

Roland

I have a Radio Shack PRO-64 400 channel hand held scanner receiver for sale. It is in good condition. The scanner has been modified to include discriminator output. The output is a 1/8" mono headphone jack on the side of the scanner. This provides raw audio suitable for data transmission decoding. I have used it to decode pagers and police MDT's, as well as packet radio transmissions. Includes original box, original manual, rubber duckie antenna.

I am asking for $50+shipping

Detailed specs can be found at http://support.tandy.com/support_electronics/36549.htm

quick specs:

receives (MHZ):

29-54
108-174
380-512
806-824
849-869
894-960

400 Channels

Computer programmable (no software or cable included). You can find info to make your own cable (easy!) as well as shareware programming software all over the internet.
Thanks!

Source record: 75271

Chris,
The 150 is a darn good scanner. I really like mine, and use it about as much as my PRO-43. It has a few drawbacks, though. First: no mods. It was manufactured after the rules regarding cell-blocking were tightened up. Second: the battery pack is not convenient to change. When your battery goes down, the scanner is out of service for 16 hours until the battery charges back up, and there is no provision for using standard AA batteries.

Frankly, cell phone monitoring gets pretty boring really quick. Most of the calls are of the "pick up the kids (or milk, or the dry-cleaning) variety. And with more and more people switching to PCS/Digital cellular, you will hear less and less on the scanners, which can only pick up analog transmissions. And the people who have the interesting phone calls are generally the ones smart enough to switch to digital. In this area, two of the really interesting ones, the police and the bookies, switched to digital almost as soon as it came out.

Mark S.

DISCLAIMER: Listening to cellular phone conversations is a violation of federal law, and I do not engage in, or advocate the practice of doing so.

I have a working Hickock Navy Multimeter/VOM for auction at eBay. Starts at $80. Here's the info.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=509132128

This is an old Navy multimeter manufactured by the Hickock Electrical Instrument Company. I have tested it with a 6VDC battery and it measured it correctly. It is missing the cover that would go over the front of it. The red label on the top reads as follows:

AN/USM 116
MULTIMETER
SUPPLY: 105 to 125V 1 [unknown symbol] 50 TO 400 [cycles symbol] SERIAL B17
CONSISTS OF ACCESSORIES AND THE FOLLOWING
1 MULTIMETER ME-180/USM-116
NAVY DEPARTMENT
BUREAU OF SHIPS
CONTRACTOR & MANUFACTURER
KICKOCK ELECTRICAL INSTRUMENT CO
CLEVELAND OHIO
CONTRACT NO bsr-87359

Function dial settings:
Off, -DC, +DC, AC, MILS, OHMS.

Range dial settings:
1 X 1, 3 X 10, 10 X 100, 30 X 1K, 100 X 10K, 300 X 100K, 1000 X 1M (dc only).

Meter scales:
0 - 1 (black), 0 - 3 (black), 0 - infinity ohms (blue), 0 - 10.0 VAC (red), 0 - 3 VAC (red), 0 - 1 VAC (red).

Probes:
OHMS-MILS (red), COM. (black), D.C. (black), A.C. (black). The A.C. probe has a strange "Test Prod" at the end (see picture).

This is the very last scanner I am selling. You cannot tell this one
from new. It does have the cell and speed
modifications done. No manual,has original antenna. My Ebay name
is mark7driver or penguinlover 2. I have
sold alot of scanners on here. Price is $270 including Priority
Mail insured. I will not go any lower on this. I will
keep it otherwise. Has the light on-off switch. Buttons are a 10,
light is a 10,cleanliness is a 10,cabinet is a
10,knobs are a 10. I will accept money orders or Paypal. Serious
inquires only please. I am located in
Nebraska.

I am considering purchasing this scanner and would appreciate comments on performance and battery life.

Thanks,
Sal
>>

lots of bells and whistles including alpha tagging, and very easy to use once you get used its configuration. it won't trunk track, if that is a major consideration. On the other hand, the display light will double as an emergency beacon.

I suggest you check the extensive review over at Rich Wells page, www.strongsignals.net

The service manual is a rather hefty beast with many colour A3 pages
and a few double length A3 so copying is not really feasible.

Unfortunately the tale gets more sad, my scanner is currently naff,
however:

2nd LO output freq adjusted first (!!)
Display freq 511.9999MHz, counter on J6 adjust L39 for 768.0000MHz

R7000 normal way up, front panel facing to your left, you looking at
the right side with all covers off.

J6 is very top about one inch in from the left (front panel)
L39 is very bottom, about two inches in from the left

Display freq 512.0000, freq counter same point
check it reads 256.0000MHz
==========
1st LO output freq
Mode=FM , Display freq=145.0000MHz
Counter connected to J2 adjust R58 for 923.70000MHz
Display freq 149.9999MHz adjust R49 for 923.6999MHz

J2 is very top about one inch from right hand side (rear)
R58 & R49 are middle height about 1.5 inch in from right hand side.
==========
Mode SSB, LSB selected, Display freq=145.0000MHz
Counter on J2 adjust R22 for 923.6985MHz

USB selected Display freq=145.0000MHz
Adjust R21 for 923.7015MHz

R21 & R22 are middle height adjacent to the rear panel

==========
Starter for ten I hope, I'll try and get my scanner going.

Mike

I can name you 8 law enforcement agencys and many other public safety agency's
in Northern and Southern California that tried digital and switched back to
analog full time on all department issued phones. The digital systems really
suck on audio quality. Analog is still more reliable in many mountains and
canyons. A lot of overseas calls are on analog also for obvious reasons.

Hello, at one time I remember seeing a web page that was dedicated to the Orange County Fire Authority's (Calif) 800 radio system. The web page was made by a scanner head, not the fire department. Anyone familiar with it and maybe have a link? It showed freqs, etc...Thanks.

3344. FRS reception?

Newsgroup: rec.radio.scanner
Date: 2000-11-27 00:00:00 UTC
From: Chuck <chuck_traveling@my-deja.com>
Message-ID: <8vuqb6$h5l$1@nnrp1.deja.com>
Source record: 75291

I was wondering if the BC3000XLT can recieve FRS transmissions? I don't know a lot about FRS, but I noticed they have "privacy code" or somesuch, which I imagine is CTCSS? Please excuse the ignorance from a newbie, just wondering if most comercially available scanners can monitor these radios.

Thanks,

Chuck

do we really think the BC780XLT will be available by "end of June" I mean
"August" , no "September" wait-wait no "November" O.K. ,O.K. FOR SURE
"DECEMBER"? OR is Uniden just over hyping the radio? just like Sony is
doing to the Playstation 2. supply and demand is what I say
I think we should boycott the radio until,

end of December.

see you in line :)

Hi Jay, I can't help you but maybe you can help me. I am looking for the Bellmore/Merrick Vol. Amb. frequencies. Can you tell me what they are or were I can go to find them?
Sorry Jay for jumping in.

Get a Garmin Street Pilot. It has a moving map display so you don't get lost. The monochrome units cost abou $400, and the full-color ones about $600. Very nice units with upgradeable software, and plug-in map modules.

okay, so i am getting lazy. i have several scanners, pro 43, bearcat 200, pro 37. just bought a pro-92 on sale at the shack.

my problem is that i can't figure out the trunking system. urgh.

i am in coral gables, florida, and found the freqs and plans for coral gables and miami at http://www.homestead.com/floridaradio/

but, how do i program them in? the manual is not too clear, and coral gables appears to use edacs, miami uses motorola type i. can anyone help me out with this?

thanks!

3358. FS Pro 2042 Reduced & Pro 2045 European

Newsgroup: rec.radio.scanner

For Sale: I posted these before and have now reduced the price on them.

Realistic Pro 2042 base 1000 channel scanner. European version with full
800mhz.
Covers 25 to 1200 continuous. Like new condition, boxed and packaged as
new with original box, manual, and antennae. $315.00

Realistic Pro 2045 200 channel base scanner. All kinds of bells
and whistles on this one. European version with full 800mhz.
Like new condition, boxed and packaged as new with original
box, and manual. Still has plastic on display. $275.00

Here is a link to Radio Shack support:
http://www.radioshack.com/ProdSupport/ProductSupportDrillDown.asp?OID=RSSupport-Communicat
ions#

From here you can check out all scanner specs including the above two.
They are the same as the European versions I am selling with the
exception of
the frequency coverage and the power requirements. Both use 12 volts dc
and
you will need a power supply. These are available just about
everywhere.

Email me for more details or questions and access to my ebay feedback.
I have an excellent rating. I will pay the shipping for the 48 State
area.

Thanks,
Rick B.

I have updated FCC Enforcement website in order kick off a campaign to get a jammer hotline installed at the FCC. With the coming change in administrations it is an ideal time to go for the jugular. With all our great activist folks out there plus our communications ability it should be fun to charge ahead. I've been receiving e-mail and phone calls from all over the country from people who have taken action.
Keep up the work.

Bruce,

Tell your wife to PLEASE tell PAYPAL that their system has gone haywire...absolutely haywire. It lets you get all the way through any given activity, send money, auction logos, etc., THEN hits you with a big red sign stating "ERROR 3004" system is busy. This has been 24 hours a day, for last two days. Many folks have responded to this post saying the same thing.

I am ready to dump PAYPAL as well, and move onto something better.

Dan

Bruce..

My original post about PAYPAL got off the point real quick...

Bottom line is that right now it is BUSTED!!!!! NOT WORKING!!!!!

Get it? If they don't fix it fast, they will loose alot of customers.
Maybe it is what they deserve.

I asked her. She said it is up and running. The reason they were down is
because they are upgrading their website. Making it better. Hence it
maybe temporarily down.

You might want to note that the South Carolina Highway Patrol is running their "Click it or Ticket" campaign for seatbelt use through December 3. It might help with the identification if you listen for some radio traffic coming from the checkpoints they have set up. SCHP is "trying" to go 800 mhz through a program with local utility company SCANA. For a good list SC scanning list, including a detailed desciption of the 800 mhz system, try http://scscan.zig.net/index.htm In the meantime the cruisers in my area are all running around with both short 800 mhz and long low-band antennas on them.

Is there a website that does not go down from time to time-how about Ebay,Yahoo? They are making improvements. This is the price of the internet. My wife says alot of people are complaining. Yet they continue to bring in more people than lose. I wish it was in human nature to be patient. Paypal was the greatest thing on earth till they started to try to earn a profit! Till it wasn't free anymore. They are a new company here in OMAHA constantly hiring. My wife says they are so busy they are 18000 emails behind. I guess people are going to complain regardless of anything. People complain about their policies! Well when you signed up there is a user policy. You agree to this when you sign up so don't bitch whine and cry. I guess if you are unhappy, go elsewhere. I would. I still think Paypal is a great easy way to get your money. An individual accepting credit cards was unheard of. This is the last I am going to post about this. It is off topic. I am not sticking up for Paypal. I like it- I am going to keep being a verified user.Not just because my wife works this company. Being a verified user even more secures doing business with a person you do not know. Can we move on about scanners???? Or the Cheek -Mackey thing.

Source record: 75225

<< heard communications loud and clear on 42.34 >>

Steve,

Conway, S.C. is an SCHP dispatch point covering the eastern half of district 5, including the Myrtle Beach / northeast SC coastal area.

Like all the other SCHP low band channels, communications are carrier squelch.

SCHP in the Columbia (state capital) area also uses 42.34 / cs , which SCHP calls channel 6.

The reference to "Henderson" might have been a license check for the town or county of Henderson, in North Carolina. The county by that name is close to the SC border, in western NC ... and I-26 runs from that county down to Columbia.

Since CHP has a transmitter on 42.34 in Nevada, south of Henderson, NV, it might be possible you were hearing something off that site (I don't know the terrain and conditions in S. Cal.).

<< and 4 digit unit identifiers >>

SCHP troopers use a letter - unit number format for radio identification. The letter refers to the district, so district 6 would be "F." The unit number is the district number assigned to the trooper, and can be a two-digit or lower three-digit number.

I believe Illinois uses a four-digit identifier, but IL has been moving to 800 MHz. At one time, I used to hear Litchfield, Rock Island and Chicago South on 42.34 MHz. The CARMA folks might be able to help as to whether any of them are still using 42 MHz

http://www.theramp.net/shabec/carma.htm

Since propagation is usually a two-way street, I can confirm that conditions from Ca TO NC were good over the weekend. Being carrier squelch, my local SCHP dispatch ("Chester") on 42.12 was being swamped by Santa Fe Springs and Sacramento.

To all you California hobbyists ... Anyone know which CHP comm center in the Northern Division is using 42.08 (Amber, Iron or Silver)?

Jeff Multer, Fort Mill, SC

Here in central Massachusetts I have been hearing strange activity on 30-31MHz lately; I am assuming it is skip. Last night I tried three different scanners on different antennas and all kept stopping at 30.44 for a strange faint data signal. I do searches every day with these scanners and have no records of hearing anything there before. Also on 30.58 I heard what sounds like police traffic (I am familiar with both military and police comms and know it's not military) very loud and clear but the only reference I can find on the FCC database is for an oil company. Any ideas? Anywhere on the 'net where I can find a list of users in the 30-31 area? Thanks!

I guess people want something for nothing. Business's are charged a
credit card fee everytime a purchase is made with it. They are passing
on half the charge. I think it is a great service. Quick way to get your
item. But that's human nature. Bitch,bitch,bitch. No pay service like
this can afford to run without a profit or any business.

Sure they say they work without a profit,But they also don't help you if you have a problem.They are fast to take your monies out of you.There is no way to get a hold of them unless you want to do long distant and be put on hold for a very long time as I was.I never got any help from them in any way.So I ended my dealings with them just recently.I look to see them folding up like other fly by nights,and a lot of people are going to get a srewing of their life.(YOU DON'T HAVE ANY PROTECTION WITH PAYPAL!!!)Check it out.LOOK,LISTEN
My two cents worth.

3416. 42.340 On East Coast

Newsgroup: rec.radio.scanner
Date: 2000-11-28 01:36:51 UTC
From: Steve Pellegrino <spell189@excite.com>
Message-ID: <T_DU5.326$rn.20249@news1.onlynews.com>
Source record: 75208

I switched the tone codes off on my patrol car's radio head this weekend and heard communications loud and clear on 42.34 MHz. I heard identifiers such as "Henderson", "Conway" and 4 digit unit identifiers. They talked with a southern accent and a timeout put them 3 hours ahead of us so I know it was on east coast. I checked Percon's Datafinder but it only lets you run a frequency by city or county.

I think this may be So Carolina Hwy Patrol from looking in the back of a Police Call book. I used to live in Massachusetts and I know it is not them. Any other possibilities?

Thank You,
Steve in Los Angeles

Yep, that's the stuff that you're missing - all the talkgroup ID's. Too
bad the frequencies aren't broken into separate trunk systems there.

Thanks Greg...

Was starting to think my computer had PAYPAL Gremlins....

It figures. All these services wind up the same way...like the
cellular carriers....sign up 47 billion people to a system capable of
handling 2 million....

Money Money Money

Dan

I just purchased a cable for the BC895xlt from Grove at:

http://www.grove-ent.com/ACC15.html

I ordered online, $35.90 with shipping, from the above site and it took
about 3 days for the cable to be delivered.

I use WinScan software which can be found at:

http://www.mghusa.com/pozilla/

The problem may not be paypal...try this:

open a DOS window
type this: tracert www.paypal.com

Pay attention to the milliseconds (ms) it takes to get there. Remember that the internet is a series of hops from computer to computer before it reaches its final destination. I just did this, and found 2 servers between me and paypal.com that are at the root of the problem. It may be different where you are...try it.

propain <propain@holly.colostate.edu> asked:
> ... were/how did you obtain the cable that you use to connect the two ...

The interface is a 5-pin PCB header (.025" square pins on 0.1" centers).
The mating socket is standard (RadioShack.com's Cat# 910-1471 is 25 cents,
plus 24 cents for 3 contacts), but a segment cut out of a DIP socket will
work just as well. The pinout is symmetric, with pins 1&5 (the outer ones)
carrying data in (to the radio), 2&4 are data out (from the radio), and
pin 3 is ground.

The cable connections are:

BC895 DB9 DB25
1 <= to radio 3 2
2 from radio => 2 3
3 <= ground => 5 7
(TR-CD-DSR) 4-1-6 20-8-6 *
(RTS-CTS) 7-8 4-5 *

* If you will be using a standard communication program, add the two sets
of jumpers in the RS-232 connector to simulate the normal control signals.

The comm protcol is half-duplex, 9600 baud, 8/N/1. Commands to the radio
should be terminated with a C/R only.

I think that they went to a digital trunked system, so you won't be
hearing much unless they simulcast on the old channels.

One more thing.I used Paypal to pay off Bruce for a scanner I got from
him.Sure was fast.But that was the last transaction to rid myself of Paypal
after I encountered problems with them.They will not stand behind you in
anyway.You snooze you loose.....

Since you're located on the East Coast, chances are good that you're hearing signals from Europe or Africa in the 30-31 MHz region, especially since the current solar cycle is at or near its peak. The frequency assignments for the 30-50 MHz band are different for foreign countries than they are for the USA. For example, at my monitoring post in Northern Utah, I frequently hear paging signals from Canada in the 30-35 MHz region, and I also hear what sounds like a Canadian petroleum company on 40.12 MHz when conditions are good. Also, I have heard foreign language communications in the 39 and 42 MHz police bands which may originate in Central or South America.

There is a mailing list reflector dedicated to VHF low band "skip," but I'm not sure of how to subscribe to the list. Try doing a search on google.com for "VHF low band skip" and see what you come up with.

part of my problem might be that i have a list of freqs for coral gables, fl., showing they use edacs, and that there are 10 channels. however, the channel number 6 is missing. i found the freqs at http://www.homestead.com/floridaradio/ but can't figure out where i can get a complete list. just went to the police station, the person in charge of communications was in a meeting....and it appears they might be digital. am i out of luck?

any ideas?

ETOH stands for Ethol Alcohol (not sure of the spelling). This is some
sort of chemical name for booze... it's used so the patient doesn't
know you're calling him a drunk! :) Just like if you hear an ambulance
call and say they are enroute with a patient, code grey, they mean
someone who is combative...

It wouldn't do you any good the ISS is in orbit. There are a couple of sites that will show you when it is going to come in to view at you location. The frequency is 143.625 which has been in the Subject line of many posts for over a month. Try reading a few posts and you will be amazed at what you will learn. I'm not meaning to flame you but in the past month there have been hundreds of posts with the information you asked. You stand a chance of not getting any reply because it has been discusses so much. You also could have listened to ISS a couple of times by now if you had just read a few posts. Good luck. It is pretty cool to hear them, even if it is just hiss and background noise or Russian sounding gibberish to a single language American.

Glenn

3440. pro 2026 mod for mobile phones

Newsgroup: rec.radio.scanner
Date: 2000-11-29 00:00:00 UTC
From: Roger <rogmail@btinternet.com>
Message-ID: <903nqi$d68$1@neptunium.btinternet.com>
Source record: 75110

The Pro-2026 has cellular frequencies deleted at the factory, but restoration is easy! Just
clip one marked wire. All you need is a Philips screwdriver and wire cutters.

1. Turn the scanner upside-down and remove the four side screws holding the bottom
cover in place; pull the cover loose and set it back about two inches out of the way.

2. Locate the small circuit board at the lower right-hand corner and find jumper L201.

3. Cut the L201 jumper and slightly separate the break.

4. Reassemble the radio which now has continuous 806-956 MHz coverage and 30 KHz
search increments in the cellular band.

I am trying to find the RS Pro-90 case (I believe it is RS #20-0062).
That shows discontinued in their computer. Price should be about $20.00.

Any ideas? Please respond here.

Many thanks!

I remember a couple of years ago there was a scammer in
Louisville,Kentucky. Does anyone remember? He took alot of people but
don't remember his name. I guess the moral is get all the info and
references on the person you are dealing with.

There are always 2 sides to the story.... Because you are having problems doesn't mean everyone is having problems. Perhaps you should look into your system a bit....maybe something went south unknown to you.

For the record, I have been using PayPal for about six months with out a single problem. I have sent/received thousands of dollars. I find it no different than sending a money order thru the US Postal system only faster. You are always subject to the nature of the person you are dealing with.

For more security, deal eyeball to eyeball with the seller.

Alex

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner

If you have a need for an SMA-TO-BNC antenna adapter that is custom made to fit and protect your H.T. or scanner radio, I have the solution.

Adapter allows you to:
Quickly change antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed for moisture and dirt protection.
The base also provides an excellent support for any length of antenna or application.
No need to remove adapter once installed to make a quick and safe antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R, VX-10, VX-150, VX-110, VXA-100, VXA-120
Icom: IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71
Alinco: DJ-V5
Radio Shack: HTX-200, HTX-400, HTX-245
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000 Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)
(Check or money order only in U.S.Funds)
(Specify radio model when ordering)

Personally Don, I think they're worth the price and so do a lot of other folks out here. Nobody was selling them for $2 at our "last hamfest". The local electronics parts house has them for $10 ea. but they do not have the nice rubber cover that Stephen's adapter has. And yes, they protect better than the regular adapters. If you had purchased one from Stephen, you would have realized that and acted a little more mature(maybe).

3456. NMO mount scanner antenna

Newsgroup: rec.radio.scanner
Date: 2000-11-29 00:00:00 UTC
From: Big Ron <bigron@idiom.com>
Message-ID: <udnb2t48lot9uphklueh2pqbdvinm5nhen@4ax.com>
Source record: 75126
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I'm trying to find a good antenna to mount on an NMO mount on my car. I prefer NMO because it is low-profile and is interchangable with different kinds of antennas. I currently use a Larsen 2/70 HAM antenna, but it doesn't do a good job on the 42 MHz or the 860 MHz bands. The 42 is where the CHP is and I listen to the Oakland (CA) Police when I go to Oakland Raider football games. Other than that, most of what I listen to is 151-156 MHz. I'd like one antenna, mounted on the same mount, to pick up everything. I'm guessing nothing will do ALL I want, but is there a good compromise?

3457. Mod for Uniden BCT-7 Please?

You might actually look at Stephen's web pages, where he has a picture
of the adapter. It clearly isn't just a standard SMA to BNC adapter
because of the rubber sleeve. Now, I can't say it's functionally
better because of that - I only own a standard adapter, not one of
Stephen's creations. But I'm willing to give him the benefit of the
doubt.

You appear ready to trash what he's offering without even bothering
to look.

Daniel M. Conti <dconti2@bellatlantic.net> spewed forth:
Bruce,
#
Tell your wife to PLEASE tell PAYPAL that their system has gone
haywire...absolutely haywire. It lets you get all the way through any
given activity, send money, auction logos, etc., THEN hits you with a
big red sign stating "ERROR 3004" system is busy. This has been 24
hours a day, for last two days. Many folks have responded to this
post saying the same thing.

Yes, the same thing happened to me. However, I used my head a little bit:

I hit the "Back" button in my browser and tried again. Everything went
through fine on the second try.

Let's see you put up a system that gets hundreds of thousands, or millions,
of hits a day and never produce a single error.

If you want a good manual, I would guess that the PRO-94's manual would be much better. The manual I got with my PRO-91 explained everything pretty well, and in a lot of detail. Both the PRO-91 and PRO-94 are made by Uniden, so I would expect the quality of their manuals to be similar. The PRO-92 is made by GRE, which may have a different idea of what quality is required in a user manual.

With a magnifying glass if it's any of your business. What's up with you, do you work for paypal also? I told my story and you come off with defending paypal knowing nothing about the situation. There must have been some illegal part done by one of the two parties (paypal or the seller) involved, my "money was returned". Or didn't YOU understand that part Bruce.

Good idea, I believe Radio Shack would look great with a "Red - White & Blue" colored logo. And you don't have to use paypal or x-com to pay for your items. There is no down time at the counter when dealing direct. You don't have to wait for the clerks to catch up on the 18000 emails for you to get attention. ALL items and transactions are guaranteed money back with no questions. You don't have to go the authorities and file charges to retrieve what is yours. Most of all you don't have to listen to some back seat paypal do-gooder defend them. Oooops, sorry Bruce. The guy who stuck his nose into something that's really none of his business, other than his wife's paycheck. Give it up Bruce and ask for a "re-count".

Yes, we did caught the change in the subject line. Your not that slick.

All that verified on PayPal really means is they have permission to
raid you bank account! If you are unverified, they only have
permission to put money in, not take it out..
The reality is PayPal would find it legally almost impossible to
reverse a payment to an unverified unless they could should that the
unverified member was a participant in a fraud or criminal activity...

>
>Is there a website that does not go down from time to time-how about
>Ebay,Yahoo?

You are being very silly to compare these websites which are extremely popular and profitable to that of PAYPAL. Yes, they do go down from time to time, albeit briefly, and they post a message indicating same, so you don't waste countless hours trying to navigate a defective site. Ebay especially, is a time sensitive enterprise where for many dealing there, time is in fact money. If they went down like this for three days with no explanation, they would not be the powerhouse that they are.

>They are making improvements.

That remains to be seen.

>This is the price of the internet.

This is the price companies like PAYPAL pay by not performing to claims on the internet. As we've seen of late, the internet e-commerce takes no prisoners. You deliver or die a swift death.

>My wife says alot of people are complaining.

I believe it. PAYPAL also offers a time sensitive service to people dealing on Ebay and elsewhere. Reputations and deals depend on getting the payment to a seller out on time, or in getting paid. Three days of glitches are not conducive to meeting the needs of this type of service.

If you sold an item to someone for 300 bucks, and now see the current performance of PAYPAL, would you want YOUR 300 bucks in the hands of such an enterprise?

>Yet they continue to bring in more people than lose.

They bring in the unknowing who have not had to suffer through PAYPAL nonsense. That trend will turn fast when word of the incompetence gets out.

>I wish it was in human nature to be patient.

...and I wish we had a president-elect, or that Santa Clause was real!

>Paypal was the greatest thing on earth till they started to try
>to earn a profit! Till it wasn't free anymore.

There is nothing wrong with making a profit, but your statement
preceeding makes the point we have been trying to make. When it was
free, it worked fine, Now that they wish to make a profit, it is going
down the tubes. Interesting.

>They are a new company here in OMAHA constantly hiring. My wife says they are so busy they are
>18000 emails behind. I guess people are going to complain regardless of
>anything.

This statement makes no sense. people will complain when a critical
service they have come to depend upon to conduct business has let them
down suddenly.

>People complain about their policies!

My initial post had nothing to do with policies. I have no problem
with their current policies, and I do not expect them to provide
totally FREE services forever.

> Well when you signed up there is a user policy. You agree to this when you sign up so don't
>bitch whine and cry. I guess if you are unhappy, go elsewhere. I would.
>I still think Paypal is a great easy way to get your money. An
>individual accepting credit cards was unheard of.

I agree, I never perosnally had a problem with PAYPAL and thought it
worked fine until it STOPPED working.

> This is the last I am going to post about this. It is off topic.

That is your option, but discussing a service many radio buffs use to
transact business when buying and selling used gear is right on topic,
IMHO.

>I am not sticking up for Paypal.

You're NOT? ...but you are entitled to an opinion on this company,
and we all respect that.

> I like it- I am going to keep being a verified user.Not just
>because my wife works this company. Being a verified user even more
>secures doing business with a person you do not know. Can we move on
>about scanners????

A VERY small percentage of posts here EVER have anything to do with
scanners or scanning.

I would LOVE to continue using PAYPAL as well, but my faith in it;s
reliability has taken a major blow these last few days that may not
recover.
>Or the Cheek -Mackey thing.

They say "ETOH" because there are certain medical afflictions which can result in similar signs & symptoms of being drunk, so sometimes it's said for liability/CYA reasons, just like if an EMS dispatch center is sending on a unit to a run where the patient is known/suspected to have AIDS, they'll throw in the phrase "Universal precautions," even though the EMS personnel are always supposed to follow universal precautions.

Another reason "ETOH" is sad is because in the likely even that the patient really is drunk, they're not going to overhear the paramedic in front of 'em say "The guy's drunk!" & then try to argue about it.

Law enforcement is more likely to just say drunk/under the influence though.

I can't get Probe 5 to install properly under Win 2K. I had it working properly before I reformatted. It won't get past the install process where it unpacks it self. When it was working before, that was when I updated my partition from Win 98 to 2000 and it was already unpacked and installed. I have had contact with the maker of the program, and he offered plenty of help, but nothing worked out. Has anyone else found a work around? Mail me at makron@rcn.com if you can help. Or just post to the group. Thank you.

Hi,

I just got a icom r-10 used for a good price. I want to modify it for full coverage. I have found a page <http://people.we.mediaone.net/baptpdc/r10/r10cntry.htm> that tells how to modify it.

My questions are is this for an old revision of the radio, or will it work on newer radios at all.

Also has anyone performed this mod? if so did it work for you?

thanks,

Bryan, KB9MCI

Dave Oswald <djo@teleport.com> writes:

>1. There are 832 channels in the 800mhz range. Very few scanners
>have that many channels, so you would need to scan frequency ranges
>rather than channel banks. But the 800mhz cellular frequencies
>actually span several discontinuous blocks within the 800mhz range.
>So you would need several frequency search banks (such as are
>implemented in the Pro-92).

Actually, it's not a problem. The frequency blocks used by the towers
and the mobiles are distinct, but normally you don't want to scan the
mobile transmit frequencies anyway, since their range is so short. You
want to scan the tower transmit frequency block, and that's one single
contiguous piece.

Now, if you want to monitor just one of the two carriers that provide
analog service in an area, you have to start carving that block into
multiple pieces. If you want to skip the control channels or whatever
channels are used for TDMA in your area, you may need to be more creative.
But just scanning to look for signals doesn't need multiple banks.

The rest of your info is correct, though.

Dave

3485. ISS heard & seen from Raleigh, North Carolina

Newsgroup: rec.radio.scanner
Date: 2000-11-30 00:00:00 UTC
From: Wayne Farmer <WayneOHere@compuserve.com>
Message-ID: <905hj1dma1@sshuraab-i-1.production.compuserve.com>
Source record: 75048
Cross-posted to: rec.radio.scanner,sci.astro.satellites.visual-observe,sci.space.station

Guided by J-Pass (http://liftoff.msfc.nasa.gov/RealTime/JPass), I heard and saw from Raleigh, North Carolina, USA, 35.76 N, 78.71 W, an excellent overhead pass of the International Space Station this morning from 0622 EST to 0630 EST, using naked eye and my handheld Radio Shack PRO-91 VHF scanner. Cloudless sky, slightly lit by the approaching dawn. Very nice! The ISS was quite large and bright, with a visual magnitude likely near the -0.5 magnitude given by J-Pass. I'd compare it to the brightness of a commercial jet at 5,000 feet with landing lights on. :) If I'd had binoculars, I'm sure I could have made out details of the ISS's structure.

I was using a center-loaded collapsible 25" antenna with my PRO-91, scanning on 143.620, 143.625, 143.630, 145.800, and 144.490 MHz. Putting my hand on the antenna improved reception quite a bit, and reception strength also varied with antenna orientation. As the ISS passed overhead, I heard two voices speaking in Russian; I'd guess it was the two Soviet cosmonauts making a joint report. Sorry, I don't know which of my scanned frequencies they were transmitting on; I was too busy enjoying the sight and sound. (My first observation.) Signal strength was best when the ISS was directly overhead, and rapidly faded as the station moved below 45 degrees azimuth.

I'm looking forward to seeing the difference in brightness that unfurling the new solar arrays will make! If all goes well and weather permits, I'll be able to see them during the next passes visible from my location and illuminated by the sun, at 1805 EST December 11 and 1738 EST December 13, according to J-Pass.

Clear skies to you!

Wayne Farmer
Raleigh, NC

Wayne, fantastic report. Thank you for your time in putting this up for all to read. We should be so lucky to view the ISS from our homes with the naked eye. Thank you for the additional frequencies.

Good report, Wayne! Thanks!

The 144.490 MHz is the *uplink* to the ISS amateur radio packet system, so you are unlikely to hear anything there unless you are close to a ham trying to connect to the ISS. We haven't had a chance to turn the packet rig on or perform any tests because the crew is so busy. Maybe in a couple of weeks...

143.625 is the center frequency for the downlink from the ISS to NASA Wallops Flight Facility in Virginia, undoubtedly that is where you heard the Russian voices. The crew uses Russian when talking to MCC-Moscow, and English when talking to MCC-Houston. They share the Wallops ground station. The Russian system uses a medium width FM modulation, but I don't remember the exact bandwidth. So, I doubt that the other two frequencies would be necessary to compensate for Doppler shifts.

During the upcoming launch the orbiter stack should be visible from your location during ascent. Assuming the weather is clear! Start looking East about 10 or 20 degrees above the horizon starting a minute or two after launch. Listen on 259.7 MHz (AM) and when you hear the VHF downlink from the orbiter you should be able to see the exhaust from the main engines. I live in the WashingtonDC area and have seen/copied ISS launches a couple of times. Lots of fun!
73,
Will

You have brought up some valid points, but appear to lack the full background
knowledge to understand what has happened before this point.

One specific individual started the troubles here a few years ago. He was in
California, & eventually lost his internet access due to his harassing actions here.
Then a few of his "cronies" started to follow in his foot steps. While the original trouble maker has (recently) passed away, a few of his followers still persist in
causing trouble. (I personally have been the victim of their vendetta a few times!)
They do not kow any decency.

This newsgroup had GREATLY improved from all the problems we had
a few years ago.

When I listen for the ISS I turn my rcvrs squelch off. If there is NO audio
on 143.625 I hear a wide band buzzing all the way from 143.625 thru 2m.

What is this? Some form of SSTV or a radar?

> only listen when it was in the area.

If you had spent 30 seconds reading you wouldn't have needed to assume anything. Have you yet gone back and read any of those posts regarding the ISS or do you just want to be spoon fed all the information?

>Is this your hobby to try to put
> down other listeners??

No. Is it your hobby to never read posts but just jump onto a newsgroup and ask a question regardless if it had been asked 30 seconds ago? Hey, leave you head up your ass, that's your choice. I gave you some good advise. If you noticed, the one reply you got was a reply to me than to you. IOW, you haven't gotten anything back from your post. My post got you some attention. Considering the 1000's od messages already posted regargding ISS it looks as if you were ignored as I suggested might happen.

You're welcome.

Dan

What do you mean thru 2m meters? Like from 143.625 up to 148?? I'm
confused. When they aren't overhead here in Tacoma I get hiss and static.
Sure you aren't receiving a fluorescent light starter or lamp dimmer? :=)
Got a .wav file of it?

Glenn

3512. BC-235 repair question

Newsgroup: rec.radio.scanner
Date: 2000-11-30 00:00:00 UTC
From: Gene Thompson <thompson@cachemedia.com>
Message-ID: <3A26CE4E.4C23352C@cachemedia.com>
Source record: 75075
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Due to extreme carelessness, I recently broke my BC-235. I bought a junker
PRO-90 as a source of parts, and once again have a working scanner. The question
is, I have two good CPU boards, which one is better? The original BC-235 board
uses a Hitachi H8/3047 CPU and reports firmware version 1.21 E26Fh when
powered up holding the 2,4 and 9 keys. The PRO-90 board is newer, uses a

H8/3033 CPU, and reports version 1.00 636Fh. Anybody know of any performance
issues with either of these? They seem to function identically. Also, does anybody
know why epoxy is covering some parts of both boards? the circuitry under the
epoxy seems to be band select lines, if there is any potential for a mod here I am
not seeing it.

Thanks,

Gene

Mackey you are a stinking pile of dog crap.

I have been a long time observer of this newsgroup and anyone remotely familiar with the crap that goes on around here knows that you more than anyone is what made this newsgroup so much less than it could have been. You have NEVER, not once in more than 10,000 posts, posted a single bit of useful information about scanning. Not one post--ever. You have single handedly been the cause of so many knowledgeable people leaving this group to go elsewhere to discuss scanning. They, like I, don't wish to associate with you since you are so completely incapable of intelligent discourse.

Your jealousy of Bill Cheek and your lunatic obssession with him really shows how empty your life is. Even after he is six feet under, you persist in your vendetta. I suppose someone like you who has been a miserable failure his whole life is simply unable to achieve even a small measure of pride or decency.

I would pity you except that I hate you passionately. Tonight I will pray that you die a horrible death. Better yet, kill yourself because you are a worthless piece of trash.

The group has not "gone to hell" , as you put it. And Medica does not "run" this group either. the reason we ignore these morons is because we have them filtered out (maybe that is something you should try). I don`t see any reason whey i should have to wade through a ton of this malarky every day, and I dont. That is why I HAVE filters. Learn to use your software. I said it two or three years ago, and I will say it again. All the bitching in the world is not going to change a thing. It just adds to the garbage.

The "Itinerant " Frequencies are now an open band, the FCC has authorized anyone to use them, no license is needed, and you can run just about any digital or voice mode you like, since there are no restrictions. This was in CQ magazine last month. The only restriction is that you not use more than 2 watts. There are not even any antenna height restrictions..... Pick up a good used "Itinerant" radio, and go to it.....

I also think that they are fine. Especially with my small ICOM R-2 with a telescopic whip. I have already destroyed one adapter by putting the rig in my pocket as I sat in a car, and I was glad that the adapter sacrificed it's life rather than my rig's SMA connector.
Regular NG readers will notice that Stephen only advertises via posting at 4 month intervals or so.
I have no problem with that at all. Especially since his adapters are quality products.

I too will not use PayPal any longer. I have an account and now they tell me that anything over 500 will cost me 1.9 percent. Well I did one deal for 600 and they charged me on the whole 600, not anything over 500.

They have seen the last of me, or damned sure.

Send me a money order by USPS priority and get your package the same way.

No More PayPal, unless you want to pay the fee and use it yourself. But, I ain't gonna pay it EVER again.

From: Matt Lacey <mlacey@nomorebelgianspam.stanford.edu>
Message-ID: <3A26F00C.A31A7E9A@nomorebelgianspam.stanford.edu>
Source record: 75085

Comments on a couple of things:

Bob said:
Interestingly, to me at least, is that these pilots spend an enormous amount of time searching for a "clear ride". The vast majority of xmissions are requests for a new altitude due to "light to moderate chop" (translation: the passengers are all blowing chunks.

Not really. United Airlines has a wonderful thing known as channel 9 that allows you to listen to the air traffic control (ATC) transmissions while onboard. If you've heard them call "light-to-moderate chop" while riding through it, it's not really that bad. IMO, constant moderate chop is where it starts to get uncomfortable. On modern jets when things are running nominally, ride quality is about all that pilots have to worry about since the computer is handling everything else. Pilots are only there to handle things the programmers haven't taught the computer yet and to keep the passengers happy. To help each other find smooth air, they make ride reports to the air route traffic control centers (ARTCC).

Dennis S. said:
Are they passing altimeter settings? Planes have to adjust their altimeter setting all the time everywhere they go. They get the setting from the air traffic controller.

Above 20-something thousand feet, all altimeters are set to standard sea-level pressure (29.92"Hg) since there aren't any mountains to run into and the air properties don't deviate much from the standard atmosphere. If you're hearing altimeter settings, then you're probably listening to a terminal radar approach control (TRACON).

Wrong. Pilots do a lot of the flying themsleves. Tom Block, a columnist for Flying Magazine a recently retired US Airways captain, said that there isn't an auto-pilot out there that will fly as nice as a soft hand on the controls. And in good weather, and even sometimes in bad weather, pilots will (most often) fly the entire approach phase of the flight by hand. And also, not every plane in the world is equipped with a 3-axis, triple redundant auto-pilot like some airliners.

>
> Above 20-something thousand feet, all altimeters are set to standard
> sea-level pressure (29.92"Hg) since there aren't any mountains to run

The exact altitude is 18,000 feet, but it can be higher or lower depending on the barometric pressure of the area. After 18,000 feet, altitude is read in Flight Levels (FL). e.g. - FL180 = 18,000; FL290 =29000 feet. However, your Flight Level is not neccesarily your altitude, due to pressure differences in the atmosphere.

>
> Glenn

I hear this buzz only when the ISS is above my local horizon. In fact when I leave my squelch totally open I can hear the buzz before I can hear the regular audio on 143.625.I listen to 143.625 on my IC-27A in my pick up truck as I am driving around. I have heard it in many different locations so it couldn't be one point source. I pick this buzz up on 145.80, 144.49, & 147.00 (the output frequency of a local repeater) when the rptr is quiet.
I just wonder if maybe some RFI from one of the clock circuits in an onboard ISS device is being radiated by the ISS.

No wave file. I will have to get a recorder to my p/u and then get someone to turn it into a .WAV file.

I would agree that the rights guaranteed by the Constitution are vitally
important to Americans. I also believe that any information that is beamed
through my head, home or immediate proximity is fair game for me to listen
to (if I have the technology to do so).

BTW, I also use a digital phone =)
Sadly, though, I'm sure "Big Brother" would have no difficulty picking up on
digital conversations.

Here's what I come up with in my 1995 Police Call. Check these out and then
do some extensive searching on the web. You may come up with something more
recent without having to buy a book.
Lacey should have it's own police now. All I have for them is 158.745,
which is some kind of municipal frequency.
Time to buy a new book.

Olympia Police:
154.875

Olympia Fire:
154.370
154.430

Thurston County Sheriff:
154.800 (Tac 5)
155.100 (Tac 3, Olympia, Tumwater, Yelm, Rainier, Tenino)
155.700 (" "
")
155.310 (?)
155.370 (Lacey, Tumwater, Rainier, Tenino, Yelm)
155.550 (Sheriff)
156.150 (Tac 2, Olympia)

Thurston County Fire:
153.830 (FPD #2)
154.430 (FPD #3,4,5,7,9 and 13)
154.400 (FPD #8)
153.770 (FPD # 16, Centralia)
154.190 (Centralia)
153.800 (Tumwater)
154.010 (Lacey, Tenino)
154.175 (Lacey, Tenino)
154.370 (Lacey, Tumwater, Olympia)
460.5875
460.6125
460.6375
465.5875
465.6125
465.6375

Below is a description of an antenna I have purchased. This antenna does work well. I have purchased two of them, the first was about 8 years ago and is still working well today.

Jeff

Spectra Multiband Mobile
4-band performance for commercial or scanner use

Austin Antenna's Spectra is a unique, patented, multiband design that brings you unparalleled 4 band, tuned antenna performance! The Spectra covers Low Band (30-50 MHz), High-Band (150-170MHz), UHF (450-470MHz), and 800-1000MHz and is transmit capable within these bands. Power handling is 100W.

When used mobile, UHF and 800-900 MHz bands are covered by high performance 1/2 wave elements. Low and High bands are covered by Austin's exclusive, offset fed, 1/4 wave elements (which provides a lower angle of radiation and better performance than a standard 1/4 wave ground plane). Translated, you'll hear the difference because this antenna performs!

Spectra's compact 33 inch design adapts easily to all vehicles with it's low profile Motorola type, screw-on, NMO mount. The design is patented #4,940,989 and is in use by numerous commercial mobile users and avid scanner listeners alike.

Compatible NMO Mounts:
NMO Magnet Mounts, NMO Trunk Mounts, NMO Mirror Mount, NMO Hole Mounts, NMO Window-lip Mount

Catalog #
Item Description

Hi Guys and Girls;

I run a email listserv, and a few of us on the list are in the process of putting together a small enews bulletin that will be distributed via the list to all subscribers.

I was wondering if anyone here in this group would be able to send in regular info (reliable info) on scanning, swl, cb etc.
For inclusion into the bulletin.

You don't have to be a professional journo or full-time novelist, as that is not what we are looking for.
What we are looking for is radio hobbyists who are prepared to sit down and write some articels, be they about a particular topic, a end-user report on a piece of equipment, antenna construction.
Whatever, the choice is yours, as long as it relates to radio.

Also we are looking for someone who can submit regular short news items, these need not be full stories, just snippets of news from you neck of the woods.

All stuff can be in either text (notepad or ms-edit) or just included in an email. Please no Mac/Linux formats, I can't convert it.
Only windows compatible formats please.

If you can help, send an email to: stew@austarnet.com.au

Thanks.

Nashville went to all digital 800mhz trunked - meaning basically no one can listen. sorry - no way around it unless you buy a radio and have an inside loop in Metro Gov't.

try Brentwood Fire - 453.500, Franklin Fire - 154.355, Williamson Co. EMS 155.925.

Andy

I got mine today unblocked from a canadian dealer. I'm sure an optotraker can
get the scanner to trunk track when hooked up to a computer which I plan to get
if it does. The optotraker has a lot of nice features like decoding, trunking
on several frequencies, and FSK. The scanner is definately worth the money.
I'd give the scanner a 10 out of 10 for picking up signals and rejecting
interference.
By the way I checked the cellular band and
it is pretty active so I'd say the $780 I payed for it was well worth it.

I use a computer and BC 895 XLT Scanner. I use freetracker shareware, which is no longer supported, and other freeware available on net, or software for purchase. Check out the StrongSignals website for enlightenment. The cable.....I cut the 9-pin Com 1 serial cable from an old malfunctioning computer mouse, and a 4-pin or 5-pin computer motherboard jumper/connector which connects from motherboard to accessories in the computer cabinet, (which also happens to fit the connector on the back of the BC 895 XLT scanner), and spliced/soldered the jumper to the mouse cable according to the wiring diagram in the scanner manual, which is also available on scanner sites on net. You can probably get this stuff dirt cheap from a computer shop junkbox. I don't have the sites handy, but I got them using several search engines and looked for several scanner catch-phrases and scanner name brands. I used a 5-pin connector from an older computer whose motherboard used a 5-pin jumper to connect to the PS 2 mouse port on the backplane of the computer. I cut the PS 2 connector off the jumper cable, and was left with the 5-pin jumper connector and 5 inches of cable to connect to the appropriate color wires matching the right mouse connector pins. Because some connectors on the 5-pin BC 895 XLT connector are internally jumped in the scanner, you can actually wire the plug 5-pin connector plug so that it doesn't matter if you accidentally reverse it when plugging the end into the scanner. When you have the diagram and materials in front of you, it will make sense.

My experience pretty well agrees with what Justme said. Okla. Highway Patrol has an extensive low band network (44-45 MHz), and I used a Larsen NMO-150 with good results. The antenna was trimmed for 155 MHz, connected to a PRO-2026. I could hear the district HQs in Pawnee (25 miles) and Okla. City (55 miles) just fine. Cars at about 8-10 miles. I could also copy the NWS broadcasts on 162.400 MHz in Okla. City, as well as the smaller towns in my area (25 mile radius) on 155.49 and 155.76. I could even receive the local PD's UHF repeater out at 15-20 miles +. Give it a try.

Disassemble the radio and remove metal shield from CPU board. The backlight
is the four leads at the bottom edge of the display. Follow the traces from the

backlight to the other side of the board and find two 100 ohm resistors. They
are larger than the other resistors and are marked "101". One end of each
resistor
goes to a backlight, the other ends are tied together and to the center lead of
a
SOT-23 transistor. Solder a fine jumper wire from the resistors/transistor
junction
to ground and your backlight will always be on. Take care that the resistors do

not overheat, they may only be intended for momentary operation. If this
happens,
you will have to kludge in larger resistors.

I'm looking at buying a Panasonic KX-TG2670N 2.4Ghz GigaRange Elite cordless phone. I've heard reports of early Panasonic 2.4Ghz GigaRange cordless phones not being secure. This model is supposed to have 3rd generation 2.4 GHz Digital Spread Spectrum technology though. Does anyone know if this means that 2.4Ghz Panasonic phones are now secure, particularly this model? I appreciate any help.

I often hear them on the air talking to various air traffic control
services while flying in my airplane. They go by the "Trooper"
call-sign. If they're performing as an air-ambulance, they may change
their call-sign to "Lifeguard" because that will assure them priority
over other routine traffic.

On the other hand, I don't know of any specific channels used by the
Maryland State Police helicopters.

I don't know which board is better, but you may want to check for the "sleep" problems that Uniden denied ever existed with the 235's. This is when the radio went into sleep mode (battery saver), but failed to wake up once scanning was started (thus missing ALL transmissions). You can find out if you have the sleep mode problem by doing the following:

- sit on a channel in conventional mode that has no activity (or 000.000) for about 2 minutes; enough time for the radio to go into battery saver mode.
- press the scan button.
- if the radio fails to pick up ANY transmissions, you have the sleep problem (my terminology). This can be confirmed by opening the squelch all the way while the radio is still scanning. The speaker will remain quiet, and the radio will continue to scan.

Although this IS a problem that Uniden has denied, it is really more of a nuisance. To get around it, just press manual one time, or open the squelch prior to pressing scan. This forces the radio to WAKE UP and sample the channel before you start scanning.

Message-ID: <9ncg2t0sa32ueckl3nf28t5t8rikrkdf0b@4ax.com>
Source record: 74959

Is there any sites or does anyone have info on LTR systems, particularly in Northern California. I know when I used to work at RELS (for a few weeks, then I quit), that we used an LTR system that had coverage throughout Northern California. We could change mountain tops, but otherwise, we could hear dispatch and other units as if we were all on the same. I know the system exists, but I don't know who owns it or what frequencies are involved, or what other users there are. I plan on getting the new BC780XLT which supports LTR, so I was thinking it might be interesting to play with it... if I knew of a system to monitor.

For those that didn't take much chemistry, when looking at the
chemical makeup of alcohol, all alcohols have a Oxygen-Hydrogen (-OH)
group attatched to the end. I believe Ethyl Alcohol is CH3-CH2-OH.
Technically, it should be written EtOH, but most people capitalize all
the letters (Et for Ethyl). It has been a while since I took
chemistry, but I remember some of it.

They were on all the usual State Police frequencies in the 154 MHz spectrum. Anyone who got in the weekend fray along I-70 between Denver and the ski areas would do well to program in CSP channel 1 at 154.665, and know whether you will 'fly' home at 30 MPH, or if you would be better off stopping at the Moose Jaw Cafe and wait out the pileups.

They hinted of moving to 800 MHz trunked service, and maybe even Denver Police Department's abandoned 453 MHz channels, but this is in the mountains folks! They're lucky to make 154 MHz work! Anybody know where they moved to? I will allow that they might have snuck off to other 154 MHz frequencies, but they just did that once already.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2042 and PRO-2006 base/mobiles, the Uniden/Bearcat BC895XLT, BC245XLT, SC200, and Radio Shack PRO-91 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your

scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for

- 2 -

free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published on the CARMA email list, carma@qth.net. You can obtain a free electronic subscription to the CARMA email list. For more info, see:

http://www.qth.net

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Most meetings are be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL.

Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

You can query FCC databases directly from this web page: http://www.fcc.gov/searchtools.html

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Other frequency web sites include:
http://w5gb.nmsu.edu/kc5kto/,
http://www.fordyce.org/scanning/, and
http://www.scannerway.8m.com.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'.

(See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of

information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army

Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each

equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals

weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

Uniden sells refurbished scanners dn you can check current inventory at their web site:
http://www.uniden.com/docs/store

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120
Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the ICOM IC-R2, Uniden/Bearcat BC3000XLT, and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 2000 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229, email: electra@tcon.net,

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor

controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855.

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 2000 - ILLINOIS
last updated November 13, 2000

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, John Wass KA9QJX, Tom Harker, and ARRL for providing some of the information.

DECEMBER 2000

Dec 3 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Dec 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Dec 17 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

JANUARY 2001

Jan 28 (Sun): Cicero, IL - WCRA Mid-winter hamfest 2001. Hawthorn Park on S. Laramie Avenue, Cicero, Illinois Note change of venue 2 blocks south of 2000 hamfest! The new location, Hawthorn Race Park, is much nicer than the Odeum. Cleaner, brighter, better food. Tickets $5.00 in advance with 4 stubs. Parking is free. Advance tickets from Kurt F. Rubin, kb9rto@arrl.net and John E. Wiley, K9FID, johnwiley@lucent.com

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet. For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

last changed June 11, 1998

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 2000 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://home.cfl.rr.com/scan/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the

squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Jan 1996 - Plectron & Motorola Alert Monitors
Feb 1996 - Radio Shack PRO-2042

Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Aug 1996 - BMI Nitelogger II tape recorder activator
Sep 1996 - PRO-2022 modifications
PRO-2042 baseband audio tap
Oct 1996 - Radio Shack PRO-2046 mobile
Nov 1996 - Build a wooden mobile radio mount
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jun 1997 - Innovative Scanner Patents of the 1970s
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Jan 1998 - Test Equipment Bargains
Feb 1998 - Innovative Scanner Patents of the 1980s and Beyond
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Jul 1998 - Stub and Par Electronics intermod rejection filters

Aug 1998 - Sony SC1PC portable
Sep 1998 - Orange Book of Scanner Repair
Tone Out Testing (2-tone generators)
Monitoring ACSB (amplitude compandored side band)
Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable
Dec 1998 - Radio Shack PRO-91 portable Trunktracker
Jan 1999 - AOR AR7000
Feb 1999 - Radio Shack PRO-2066 mobile Trunktracker
Mar 1999 - ICOM RS-8500 software for controlling the IC-R8500
Apr 1999 - ICOM IC-R2 portable scanner
Jun 1999 - Mini-Circuits ZFSC-4-1 4-way passive splitter
Jul 1999 - Racing Electronics RE2000 portable
Aug 1999 - AOR AR16 portable
Sep 1999 - Uniden Bearcat BC245XLT portable
Oct 1999 - Plectron R700 series monitor receivers
Nov 1999 - Uniden Bearcat BC278CLT clock radio scanner
Dec 1999 - Uniden Bearcat BC248CLT clock radio scanner
Jan 2000 - Radio Shack PRO-92 portable scanner
Jan 2000 - Stridsberg Engineering FLT201A FM Notch Filter and
MCA-204 Receiver Multicoupler
Feb 2000 - Yaesu VR-500 portable wide coverage receiver
Mar 2000 - Uniden Sportcat SC-200 portable scanner
Apr 2000 - Understanding Intermod,
(comparison intermod performance of several models)
May 2000 - Radio Shack PRO-94 portable
Jun 2000 - Radio Shack PRO-2052 trunk tracking base scanner
Jul 2000 - Electra Tiger Scan TSA portable
Aug 2000 - Phone patches; Identifying scanner crystals
Sep 2000 - Radio Shack PRO-2067 trunk tracking mobile scanner
Oct 2000 - ICOM IC-R3 portable wide band scanner
Nov 2000 - AOR AR3000A wide band receiver
Dec 2000 - Alinco DJ-X2T portable scanner

Note: Reprints of Monitoring Times articles are available
for $3.00 each plus a self-addressed stamped envelope from
Grove Enterprises, 7540 Highway 64 West, Brasstown, NC
28902, tel. (800)438-8155. I don't receive any part of this
reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back.
Multimode frequency coverage 0.1 to 2000 MHz (minus cellular
bands). 20 selectable step sizes from 0.05 to 500 kHz.
Knob atop the radio clicks when rotated and serves as a VFO
knob, channel selector, and menu navigation control.
Several battery pack options for NiCd and alkaline battery
cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack
and a sturdy 11 hour drop in charging stand. Loaded with
firmware features and complicated to use. Two VFOs and 1200

channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult

user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel

can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2

VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents

4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage

to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are

backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test

unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR

scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be

programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image

rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The

Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per

channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date.

Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search.

No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. For a service manual, call SONY at (800)488-7669, and press 3. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you

find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes

FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

>would like to reset to 00.0000..

As I recall, when I purchased my RS-25 new several years ago, the channels never were set to 00.0000. They were all set to some frequency, I forget what it was. I think in was in the 400MHz range. Perhaps you could set the channels you are no longer interested in to some frequency not used in your area. Or why not just leave them locked out? That's what I did.

I recently purchased a Uniden Bearcat UBC220 XLT scanner privately.

The seller had no instuctions and I was wondering if there was anywhere on the net where I could read them.

As I am new to this hobby, I want to make sure I am getting the most out of my scanner by understanding all of its features.

Is the 220 XLT well regarded?

Thanks
Gavin Miller

Are you talking credit card, or cash? With a PayPal Personal account, cash transactions are free, as are credit card purchases and balance transfers. Receipt of credit card payments costs a fee because the banks charge a fee to the merchant (PayPal). However, you are allowed $500.00 of credit card payment receipts every 6 months without a fee.

If you have a commercial account, then you pay 1.9% on credit card receipt transactions. This merchant discount is typical in business, and a 1.9% credit card fee is very reasonable, and well below the direct bank merchant account fees.

Bidpay, by comparison, charges $5.00 for up to $100, and $5.00 plus 2.5% for amounts over $100.00 - and this is for cash or credit. PayPal's fees are more than fair by comparison.

I can't look at his web site if he does not provide it (I have neither of the indicated magazine issues where it was supposed to have appeared). If you say its good stuff then I happily admit my guilt, but it certainly had "scam" written all over it (to my unaided eye).
A lot of junk finds its way here under "FA" and "FS" banners. Sight unseen, I can't imagine a rubber gasket, grommet, or whatever, being protective to any practical extent. The sound of it was reminiscent of those recent cellphone foam "rf protector" and the foil "range booster" items.

Admittedly, I suspect the whole SMA deal to be something of a calculated plot to sell all brands/types of those blasted adapters. Bet there aren't many folks who don't slap a BNC connector on there immediately - If for no other reason than to speed up connect/disconnect.

I accept your testimonials to him if you accept my public apology for being skeptical.

Don

In article <3A25EFED.EFF@atdial.net>, rdk1@atdial.net was of the opinion...

When the ISS is NOT overhead you should hear nothing but static with
the squelch off. They have to be in YOUR sky (and on the radio) to
pick them up. It's line of sight propagation.

>What is this? Some form of SSTV or a radar?

No. Maybe local electrical noise or something. Any flouresent
lights nearby?

Light is as bright as new. You can tell scanner has very low use.
Scratch free,clean and just perfect! Modified
for cell and the speed mod has been performed. Fresh 9 volt. Like
a new scanner-should last years! $240
includes shipping. I accept Paypal (certified),money orders or
checks (clear). My Ebay name is mark7owner or
penguinlover2. I have sold alot of scanners with great
satisfication. There is none nicer than this!!

Hi, Alex:

I used to own a Regency MX-5000, which is basically the same rig, but minus the 800 Mhz coverage. Both were made by AOR under license to Regency, so your assumption about its similarity to the AOR 2002 is pretty close. The main difference seems to be the MX-7000 has a membrane keypad while the 2002 uses the more preferable buttons.

Bottom line: Nice radio, but slooooooow. I think the scan rate is 8 ch/sec. There is a mod to increase the scan rate to 10ch/sec, but its hardly worth doing. Also, the membrane keypad tends to dry out and crack. At the time, I was able to replace it with one I purchased from Ace, AOR's distributor in Indianapolis. I don't think they are still in business and new keypads would be hard to some by. Only 21 memories too, I think.

I guess one advantage is unblocked 800 Mhz coverage, which is nice. Also, I believe my MX-5000 would do continuous coverage from 25-550Mhz, and the Mx-7000 goes to 1300. That's neat.

Due to the slow scan rate and small number of memories, I tend to think of this rig as more of a wide coverage receiver than a scanner. Sort of like the Yaesu 9600, for example.

If you want a scanner, there are plenty of 800 Mhz capable units out there with much faster scan rates and plenty of memory channels. Probably in the same price range too.

I'm not sure what the value would be. My guess is about $125 +/- ? You might do a search on eBay and see if any are listed. The problem is, the EBay police (grin) probably cancel any auctions of this radio as it is cellular capable.

Also try doing we searches for the Mx-7000 and see if that gets any hits.

Good luck,

-Larry

I recently purchased a 'sold as seen' Realistic PRO 2039 from Tandy (Radio Shack in US). The radio works fine except for a mains hum which is at a constant level despite volume setting.
I am toying with the idea of ditching the internal power supply and fitting the set with a socket to accept an external PSU, however I was wondering if anyone had experienced similar and overcome it by internal filtration, or if anyone has any suggestions for same please.

Very nice radio, I have one.

> Good, bad or ugly.

Good looking radio.

> Value?

Fully cell enabled 20 channels but scans slowly. Good sensitivity and
selectivity though. Covers 25 to 1,300 straight, no gaps.

Roland

NMO is the designator used to describe the -Motorola- style of mobile antenna mounts. Unlike other mounts, such as the standard 3/8"-24tpi CB mount, it allows antennas to make use of both conductors of the feedline. This makes it very versatile for many different types of antennas - particularly those which work on multiple bands. It is also a low loss mount that you can run strong radios through. I think it is safe to say there are more NMO mounts and antennas purchased than any other type. They are typically made to be installed in either 3/8" or 3/4" holes - but of course are available in mirror, trunk, gutter, thick plate, magnet and pivoting mounts.

RF radiation is a topic of much conjecture and misinformation. There is no disagreement, however, that high levels of RF exposure can cause blindness, sterility and have been linked to much greater incidences of chromosome breakdown and cancers - particularly in the young. The argument ensues when one attempts to determine the effects of low levels such as those from cellular phones. I try to minimize my exposure by keeping as much RF out of the cab as possible, and I suggest that everyone else do the same. As with most things in life, moderation is often the key. Standing beside a Suburbans with 10kW amplifiers during CB shoot-outs are not moderate behavior any more so than hanging off of TV transmission towers. :-)

>They hinted of moving to 800 MHz trunked service, and maybe even Denver
>Police Department's abandoned 453 MHz channels, but this is in the mountains
>folks! They're lucky to make 154 MHz work!

Funny, that didn't stop the local highway patrol and county sheriff's dispatch in mountainous Northern Utah from ditching their 155 MHz frequencies a few days ago in favor of the state's new 800 MHz trunked system. I'll bet money the CSP has abandoned their VHF frequencies in favor of 800 MHz, especially if they hinted at moving to that frequency range earlier. You might try checking the FCC database to see if the State of Colorado has a trunked system in the 866-869 MHz range.
In Utah, the trunked public safety system is licensed to the state rather than the individual counties and cities which use the system.

Interestingly enough, the Utah Highway Patrol in Weber County and the Weber County Sheriff have only been on 800 MHz for four days now, and the cops are already complaining about not being able to hear the dispatcher, or the dispatcher not being able to hear them. Maybe that's why the officers are still using their old VHF frequencies for car-to-car traffic.

73,
David

The really wonderful thing about free enterprise capitalism is that HE
gets to charge what he wants (without the slightest regard to your subjective
views as to what it is worth) and YOU get to build your own if you don't like
his price. Get to work!

Did you look at the StrongSignals website at

http://www.strongsignals.net

where you can find in-depth reviews of many handheld
antenna? There are some there I never even heard of -
I don't think you'd do that well with a wire strung all over.
You're looking at too much antenna for the frequencies
covered by the PRO-90. The Diamond DH77A, I think
it was, was recently recommended to me as a quality
HH replacement, for instance. If you're not receiving
much after trying a variety of antennas, I'd also check
into the possibility that the connection in the radio is
the problem.

Peter,

I have the BCT-7 and think it's a good scanner. It has worked in
the vicinity of a police cruiser. Sometimes it's gone off and I don't
see anyone. But, think they are on a parallel road. May be a false
reading. When I drive down to Salem, Mass., there's a tower
that is putting out a signal and the Tracker goes off. I also get
false readings on my radar detector in this area.

One drawback to the Tracker, is you can only scan one service at
a time. Say, only police or fire. The 7 is programmed for 800, so
this works well in Mass. near Logan airport and the SP is trunked.
New Hampshire has one trunked city, Manchester, and usually I
pick up one or 2 channels. It's also better to use an external antenna.
The one supplied is good for stealth, but I believe the vehicle
body interferes with reception.

Overall, I'm happy with the BCT-7.

I would suggest one of those splitters for your car radio antenna. The splitter lets you listen to both your car radio and your scanner by using your standard car's antenna.

I'm not sure but I think Grove may have them. I know Gall's (a police/fire/EMS supply house) does, but I think they want around $15 for them.

On the other hand, I've had really good luck with one of the cellular look-alike antennas from Ripoff Shack.

Andy, if you are looking for Helo freqs in Maryland you NEED the August 1999 issue of Monitoring Times magazine.

There is an article by Alan Henney that has a list of the exact programming that is in the trooper's helicopters. 350 channels.

I can't find anything with a description like you mention. There is a listing for Hopkins Hosp Security on 461.775 (141.3). They probably use one of the "Med" channels.

Here is a link to where you can order back issues.

Paypal is superior to any other system out there, in spite of any problems. The billpay charges fees to the seller and paypal doesn't. Simple as that. I am not connected to the company at all but I have used it about 8 times with no problem. I can pay for auctions out of my bank account or my credit card. My choice and very well written setup doing it.

PayPal isn't free if you do anything more than casual business with
them. Billpoint is free to the buyer regardless of volume. PayPal
limits total credit card purchases severely.

Billpoint pay a LOT faster then Paypal. Paypal takes 4 business days,
while Billpoint used to be 4 days, they are now down to 1, and a
merchant account at Billpoint is very competitive with PayPal, and
provides much better service.

3664. Saturday Live Scanner Chat

Newsgroup: rec.radio.scanner
Date: 2000-12-02 00:00:00 UTC

There will be a live chat going on in the #scanatlanta chatroom on the DALnet servers of IRC tonight starting a little after 9 p.m. EASTERN time. While most of the past participants have been from the Atlanta area, we invite anyone to stop by and chat about our hobby and what you happen to be hearing on your scanner tonight.
The is a pretty laid back chat group and we aim to keep it that way. THIS CHATROOM IS NOT A PLACE TO CONDUCT FLAME WARS, DISCUSS POLITICS, OR CARRY ON ANY OF THE OTHER USELESS CRAP LIKE HAS BEEN SEEN IN THE "USENET" NEWSGROUPS. If you can't be fun and sociable, please stay away.

For those of you who aren't familiar with connecting to chat groups, some info. is posted at the end of this message that should help anyone with a basic knowledge of computers to get started.

Hope you have a chance to drop by!

Use an IRC (internet relay chat) chat program such as mIRC, pIRCh, etc., to access the ScanAtlanta chatroom. You download the mIRC program for FREE at http://www.mirc.com/. There are lots of FAQs covering IRC chat in general on this site. Since that website gives a good overview of IRC, I will not try to duplicate it here. Basically, "IRC chat" is a way to chat "live" with people around the world.

IRC software packages are available for most any computer running Windows 3.1/95/98 and Mac. These programs are not hard to setup and run for most people but everyone's computer is unique and thus could have conflicts of some sort. We have tried the Java based chat software programs, but they were very slow/cumbersome. Since we did not get a good response from new members toward the Java programs, we went back to IRC based chat.

Once you download the mIRC software and install it, follow the setup directions as prompted by the software (put in fake stuff for your real name and email address!!) and pick a nickname for yourself. Then once you are_already_online to your ISP, you click the second icon from the left ("options") on the icon bar found near the top of your screen. A popup window will appear. WE HAVE SWITCHED TO THE "DALNET" SERVERS BECAUSE OF THE HIGHER PARTICIPATION RATE AND APPARENT EASE OF USE FOR SOME VISITORS AS COMPARED TO THE PAST SERVERS. Go to the second drop down box which lists the different servers available, scroll down this list until you get to the section that starts out with "DALnet" server names, click on one of them (I usually try the one in Ohio or New York,

but you can try any_one_in the US). Then click on "connect," NOT the "OK" button. It will take a while to connect and get you going. Click on the "Status" box to watch your computer and the server "do a dance" and connect. This little dance can take a while to complete. Additionally, you may get a "can't connect" or "server full" error which means you must try another server. To do this, you again click on the second icon from the left ("options") on the icon bar near the top of your screen and choose a new server (follow the directions as above).

Once things come up on the screen, click on the "channels" icon (third from the left). Type in #scanatlanta in the top box/entry field, then click on "join" - NOT "OK "or "close" buttons.

If you are successful, you should see a new window open and you will find yourself in the chat room. On the right side, you will find a listing of those who are in this chatroom. Be warned though, some of these nicknames may be for "bots" while others could be for live people in the chatroom. Just type in "hi" (and hit return). Somebody should answer you. NOTE: Often people will go away from their computers for a few minutes to do other things, so stick around for a few minutes if you don't get an answer right away.

The chatroom is open for anybody to use 24 hours a day, 7 days a week, but as of late, about the only time you will find anybody "alive" in there is on Friday or Saturday nights. If anybody actually shows up on these nights, they usually come in around 9-10pm Eastern and most usually leave around midnight (depends on how interesting the airwaves are that night). If nobody seems to be "alive" in the chatroom, post a message to the ScanAtlanta list and invite people to join you in the chatroom.

This chatroom is a place for people to come have fun discussing scanners in general and what they are currently hearing on the airwaves. THIS CHATROOM IS NOT A PLACE TO CONDUCT FLAME WARS, DISCUSS POLITICS, OR CARRY ON ANY OF THE OTHER USELESS CRAP LIKE HAS BEEN SEEN IN THE "USENET" NEWSGROUPS. If you can't be fun and sociable, please stay away.

If you post a "breaking event" message to ScanAlert, monitor the chatroom to hookup with others who might also be monitoring the same event (put a "meet in the chatroom" notice in your post to ScanAlert). If you post a message to ScanAtlanta/Alert for people to join you in the chatroom, remember, it can sometimes take 15 minutes for your emails to get out to people via EGroups.

That is a brief overview. Read the FAQ's on the mIRC website if you have problems connecting. Visit the homepage for ScanAtlanta at http://www.scanatlanta.com

I like the Antenna Specialist Monr 52 or 53. One is a trunk mount, one is a hole mount. I've had this and the Austin Spectra and the A/S performs as well and is more durable. The only draw back is that it is longer. You can cut the top section to tune it to a specific part of the VHF lo band without it affecting any other portion.

>From: Peter Bansen pbansen@jps.net

>Anyone want to share their experience with the Bearcat "Bear Tracker"
>receivers?

I've had all 3 of these (still have 2 of them)
the BCT-7 is a great little scanner.... period
not much of a "bear tracker"

The BCT-10 is totally worthless for either
purpose

the BCT-12 is GREAT as a bear tracker
(not many falses... and DOES give a
good warning) However it, like a radar
detector are not fool proof.... they work
on the mobile extender frequencies which
may or may not be active at the time.
my experence.... use BOTH the BCT-12
and a radar detector.....
When the BCT-12 "goes off" there is usually
a state trooper around.... however, I have
also driven right past them and not a
peep from the BCT-12

Its kinda like a radar detector, if the car
doesn't have his radar unit turned on...
the detector won't make a sound.
same with the BCT-12

Waco PD and Mclennan Co. are on Motorola Type II, the frequencies are:
856.2375; 856.7625; 856.9375; 857.7625;
857.9375; 858.7625; 858.9375; 859.9375;
860.9375

Works with Trunktracker I or II.

www.digikey.com or www.mouser.com are two main houses that have them. I think with Mouser there's either no minimum or very little. And if you're in northern NJ you can actually pick it up right at their front office in Randolph, NJ.

After an experience I had with them I cancelled my PayPal account and now warn everyone I know that is considering their services. What it boiled down to with me is getting a response to my numerous emails to them weeks later after my initial email and never having a phone # to speak to a PayPal representative. It should NOT take as long as it did to obtain communications with any company you have relations with, especially when that company has crucial information such as your bank account #'s, credit card #'s, etc.. A company such as PayPal should realize how touchy people can be when it comes to their money, bank accounts, etc..and have a better path for communications then email alone. Never again will I use such a service as PayPal. It's a US Postal Service money order or nothing for me now, unless I know the person I'm dealing with enough to let them pay by personal check. Good luck to everyone and anyone using PayPal or other such entities.

> selectivity though. Covers 25 to 1,300 straight, no gaps.

I still own one, and I will keep it until it dies. I use it as a general-coverage receiver; after the speed-mod it still only scans/searches about 11 ch/sec. Coverage is actually 25-550 and 800-1300, so there is a gap but only from UHF TV channels 27 through 68. The only thing you'll miss with that gap in the future is potential two-way services from 700-799 MHz, which may use digital modulation schemes anyway.

Sensitivity is good, and selectivity on the MX-7000/AOR-2002 is EXCELLENT. My Bearcat 895 has major problems separating 12-5 kHz-spaced transmissions with 935-950 MHz trunked systems, but the MX-7000 pulls in these signals of varying-strength with ease, thanks to the finely-tuned IF stages in the unit. There aren't many radios that sport three circuit boards these days either, one with most of the power- and audio-circuits, another with mostly RF, and the third for the controller chip and display. There aren't all those annoying images in this receiver either, like on Bearcats where your VHF-hi frequencies get splattered by AM aircraft.

You can select AM/FM/Wide-FM modulation modes on any frequency, so you can use it on AM signals in the 6-meter amateur band, etc. You can also select 5kHz, 12.5 kHz, or 25 kHz step for any frequency for the search.

Here are the faults I have with the radio, so you know what to expect:

-- Cheap membrane keypad. Mine still works okay but I've read many posts from other people that theirs needed replacement (in fact there's a post on this NG right now!)

-- RTFM otherwise it will take you many days to figure out how to use it!

-- No "Hold" button! There's a trick you can play with the clock to create one, though. Basically, you set the time-of-day clock for 00:00:00 but don't hit Enter -- This keeps the clock stopped so that the Delay feature becomes infinite until you hit "up" or "down" and any number-key (gives an error-beep but works!).

-- Oddball three-pin 12V power connector. My wall-wort died, so I installed a newer socket on the back of the radio so I could use a common 12V adapter.

-- SLOW scanning and searching, and only 20 channels. There is a mod to go from 7ch/sec to about 11 which isn't much, but the mod increases the pitch of the annoying keyboard-confirmation-beep to a pleasant chirp.

the Cat

You obviously haven't used billpoint in the past 2 weeks.

Electronic check is the slowest form of payment there is on either
service.

3694. UPDATE - BAD GUY Alert Jerry Pippins

Newsgroup: rec.radio.scanner
Date: 2000-12-03 00:00:00 UTC
From: N6TGK <n6tgk@home.com>
Message-ID: <MtwW5.33331$I5.557839@news1.rdc1.sdca.home.com>
Source record: 74865
Cross-posted to: rec.radio.swap,rec.radio.scanner

I posted a "Bad Guy Alert" here about a week ago concerning Jerry Pippins (aka cbnut24 or cbfixxer). I stated that he was supposed to ship me a Uniden
HR-2510 in exchange for my BC895 Trunk Tracker.

Jerry claimed to have shipped the radio on November 13th, I shipped the 895 on
the 14th. He got the 895 on the 21st of November. On Thanksgiving day I started
asking him where the 2510 was and he came up with a bunch of excuses as to why it wasn't here. He eventually responded, "Don't be a whine ass, you'll get
it." After that, his e-mail address was no longer valid.

On December 2nd I FINALLY received the 2510...postmarked Nov 30!!! But that didn't bother me. At least I had finally gotten the "excellent condition... you'll love
this radio" 2510 that Jerry promised me. Upon opening the box and digging through
the packing I found a PATHETIC looking 2510. The case and face plate was scuffed
up like you wouldn't believe. The power plug on the back is broken and pushes back
into the radio whenever you try to connect the power cord, the accessory plug has
epoxy all over it and someone added a speaker jack and did a very poor job of it.
Upon removing the covers I found that the back part of the display was melted because
some MORON removed the original lamp (probably burned out) and replaced it with
a HIGHER wattage lamp. This lamp melted the display to the point that the lamp
will no longer stay in place. Wires have been snipped and slodered to other locations,
obviously an attempt at doing some kind of modifications. There are cold solder joints,
large globs of solder and someone added a small PCB board to the underside of the
RF board and is being held in place by pieces of solder. I have no idea what this board
does. The radio smells like smoke and has the hint of burned components.

I obviously didn't get a fair trade since my 895 was in NEW condition and this 2510 is
probably only good for parts.

Avoid this person if you can. I was able to find some feedback about this guy on Yahoo! Auctions and his feedback was very poor. He's still holding to the pattern from those posts: ships late, has several excuses and doesn't send what is promised.

Jerry... if you read these news groups... thanks a lot liar.

Maybe I'm just super-duper mart, but I'd never buy a 2510 or ANY
10-meter ham radio from someone calling themselves "CBNUT" or
"CBFIXXER."

I hope that you're going to take action besides just complaining about
him. Based on your side of the matter, it seems like he committed
fraud.

Hello There,

Just a quick question wondering if anyone has the frequencies for the City of Saint John Police Force as they are using Trunking and my old frequencies are no longer valid. Also quick question the City of Fredericton has a complete new radio system tried monitoring the old Frequencies who no activity for a few days...are they also on the trunk system any idea on their new Frequencies! Any help appreciated....Thanks
Aaron

I want to add an extrena antenna to my car so I can pick up railroad traffic better.

My only use is for railroad and because of that I would like to know how to tune an external antenna to be optimized for 160 Mhz. Is it length, do I need some type of meter?

I dont care about sacrificing performance at any other frequencies.

Thanks,
Pete

That's blaming the victim; I disagree with that. The radio community unfortunately has some very bad apples and it always saddens me to hear stories like that. I make it a point to always go overboard to please the people I deal with - the hobby has enough "black eyes!"

The previous owner may have done a snip n' clip on the beep to avoid
having to put up with that. I end up doing it on my scanners
especially when I am programming them via the PROgramit interface. The
beep will drive you insane.

The k band freq is 24.150 which is in the Amateur band. We can run
pulse modulation at that freq.

The x band stuff is near a ham band. It is something like 10.525 GHz
with Ka up around 33-36 Ghz...

Most frequency guides and listings only show the frequencies that are licensed, not how or if they are currently used. (And many web pages contain a lot of errors.) A savvy listener knows which freqs are the best in his area. IF you are in that area and don't want to share your information, then don't. Most listening enthusiasts enjoy passing on what they've learned. Knowledge is not a zero-sum game. You don't lose knowledge by sharing. You can promote and support this hobby a lot better by making your knowledge available to others, so that more people can enjoy monitoring. I don't live in the area Ron wants, or I'd be glad to help.

What the other responses have said is true and I agree but you SHOULD post the name or the email address so others can be warned. If enough folks posted there bad experience on the newsgroup from which the sale originated, eventually the bad guys will be weeded out and others MAY see that a clean deal avoids "misunderstandings".

> Has anyone any information on modifying the 92b to bypass filtering of
> certain frequencies?

The thing is that the values for the frequency ranges are hardcoded in the CPU. So either you need to reverse engineer the CPU and build a replacement, or you have to "trick" it. The latter would involve adding some circuit that up-converts or down-converts frequencies. The idea behind this is to take frequency ranges that are "blocked" and convert them to frequency ranges that are not blocked. Sorry, I don't have any more info. Perhaps you can search the Web for "down-conversion techniques".

Another problem you may encounter is step size. Even after modifying the radio for down-conversion, you still may not be able to set the correct step size for the frequency range you are interested in -- scanning may skip over many valid frequencies.

Hi,
had the same with an other Realistic couple of years ago...teh Capacitores
became dry and the AC hum cam...change them all or ...as you found
yourselfe...kill the internal PSU and connect an external 13V AC/DC.
It works, but use one with > 1 Amp DC load.

If you are using Outlook Express as your Mail program, it is very
easy. You can block senders (aka: kill file) or create a rules to
filter messages (i.e. if the message contains "adult", delete message).
This newsgroup is actually worthwhile now that I have an extensive
kill file and rule filter. ;-)

Many spammers randomly generate their return address, so it
is almost impossible to add them to a kill file. However, they do
use the same verbage in all their sales pitches. If you create rules
to identify these common phrases, you'll find that none make it
through. It took me a while to add enough rules but it is extremely
rare that one sneaks through now.

I also don't have my return address automatically added to my
newsgroup messages. Many spammers consider NGs a free
mailing list.

Here are some of the rules I use in my filter:

Apply this rule after the message arrives
Where the message body contains 'To be removed'
Delete it

Apply this rule after the message arrives
Where the message body contains 'If this message reached you by mistake'
Delete it

Apply this rule after the message arrives
Where the message body contains 'adult'
Delete it

Apply this rule after the message arrives
Where the message body contains 'This message is sent in compliance'
Delete it

Apply this rule after the message arrives
Where the Subject line contains 'Win a FREE Trip'
Delete it

Apply this rule after the message arrives
Where the message body contains 'Mortgage Loan'
Delete it

Apply this rule after the message arrives
Where the Subject line contains 'Mackey'
Delete it

Apply this rule after the message arrives
Where the Subject line contains 'blowers' or 'mackey'
Delete it

Apply this rule after the message arrives
Where the Subject line contains 'allsafe'

Delete it

Apply this rule after the message arrives
Where the Subject line contains 'corky'
Delete it

New rules added as necessary. ;-)

Good luck,

Robert

What are you talking about???? No protection? They don't pay someone
umless you authorize the transaction! And click the send button. If you
send money to a unverified user it is your risk. Read the faqs or terms.

I know first hand. Billpoint doesn't take security as seriously either
or fraud. They also charge more. You don't draw interest in your money
on account either. Try them and stick with them-you will see. I have
used Paypal at least 200 times without a problem! the problems are
caused by the user who is not educated. People also bitched because
Paypal was down for a couple days. The reason-they were adding more
security protection features. I wouldn't stick with them either????

Message-ID: <3a2b72e7.257229124@192.168.0.1>
Source record: 74762

There could be several reasons;

1) The hospital that was 15 minutes away may not be equiped with the equipment or personal to properly treat the victims.
2) The hospital that was 15 minutes away may have been closed to all trauma patients because they had a major evet going on. (i.e. From time to time some of the trauma centers here in NE Ohio notify EMS dispatchers they are closed due to a large number of major trauma victims already at their ER.
3) If the road is blocked in the direction of the nearest hospital, the ambulance may not be able to get the victim there in a matter of a few minutes.
4) If the victim(s) are trapped in the vehicle, and it's going to take considerable time to get them out, they will call for a chopper. The chopper can be on the ground and waiting for the victim before they get them out of the vehicle. In a trauma case the victim may only have a very few minutes, and if it's going to take a while to get them out of the vehicle, and take them to the ER by ambulance may just take to long.
5) In NE Ohio our choppers have Doctors on board. These Drs can preform many more procedures in the field, than can the paramedics.

Hope this helps answer your question.

I have wondered the same thing myself. Our little rural emergency room is located about 60 airmiles from the major trauma center (about 90 road miles). When our little E.R. calls for a helicopter it takes approximately 60 minutes to arrive, then they are on the ground about 20 minutes and then I presume it is about 30 minutes back. Our ground ambulance could make the trip in less total time. But my guess is that it has to do with the enroute time. I know our E.R does not transport a patient until they are so-called "stable". I suspect that the transport time is a critical time in which a "stable" patient could get in trouble with somewhat limited ability to deal with it. With the ground amb. this enroute period would be 90 mins vs. 30 mins for the helicopter. Possibly your situation calls for ground personal to extract and stabilize the victim and then uses the fast transit time of the helicopter.
This is a totally a guess -- I faint at the sight of a nose bleed.

Actually, it does serve a real purpose. The real purpose is so that the rest of us can avoid getting burned by the same person.

Don't you wish that the last person who got burned revealed that fact? So that you perhaps could have avoided your current experience? Now that is a *real purpose*, don't you agree?

I just don't understand the thinking of people who say "I just got cheated by a thief, but I'm going to keep his name secret (so that you, too, might share my experience)." It seems similar to people who come to work sick (so that you, too, might catch it and share the experience?).

Generally, there is the golden hour rule. A patients best chance for survival is appropriate treatment within that hour.

You want that patient in a trauma center as soon as possible from the time the clock starts ticking. Good point in one of the last posts: If it's a vehicle accident and a long extrication, your going to be talking shock and good fluid loss if IV not established.
The helo is your best method unless your in a matter of blocks or a few miles of a hospital.

In our area (Richmond, VA) the Level 1 trauma center doesn't have a landing pad on the Hospital. The pad is actually five blocks away! This system still works when rural transport time would be 20 minutes or more. A city run unit picks the patient up at the helipad and transports the flight-medic and patient the five blocks to the hospital.

It's a judgment call in most cases. The medic in charge will usually ask about Med Fight availability on the way to a possibly bad accident or whatever. Once the medic has assessed the immediate situation, a call can be determined at that point. I've probably called Med Flight six times in the last two years for patients that would benefit an air transport.

Again, every state or city has their own policy. There's nothing like stopping three lanes of traffic and setting a helicopter down at an accident scene. (we don't do that on purpose, but it happens...)

Hope my input was helpful in understanding why we use helo's.

What you suspect is part of the equation, but in most Med Helo operations,
you have a nurse, and possibly even a doctor, in the helo, rather than just
paramedics. Paramedics ARE very good at what they do, but it's not the
same as having a nurse or doctor on hand if the patient starts going
downhill during the transport.

Well it all depends on what you want to listen too. If you live in an area where there is trunking then you would be better off getting a trunking scanner. Police, Fire, Ambulances, Public Tranist, Businesses, Airport Operations (Not the planes and towers, etc.) use them, Military, County systems, State-wide systems, Digital, Analog, Motoorla Type I, Type IIi, Type II, Errricsson. Know what you want to listen to, whta type of system they use, what set of frequencies (Trunking can be found in 150, 400, 500, 700, 800, & 900 Megacycle Bands.) and if the system you want to listen to is Digital or not will detremine what type of scanner you need to buy. There is NO DIGITAL scanner on the market as yet. Hopefully there will be.

If you have access to a computer at home and not just a public access terminal @ a library the nyou could listen for free on your P.C. (Well it is free cause there is NO CHARGE to listen just to access the NET.)

You will need to know if you want to listen to just Narrow F.M., Wide F.M. or A.M. or a combination of the above. Most services, above 30 Megacycles in this country operate on Narrow F.M. with the exception of some services in the 200 - 222 Meagcycle band which use A.S.C.B., aeronautics which use A.M., and F.M. radio stations, and T.V. Stations which use wide F.M.

You might also want to look into getting a USED scanner from somebody that you can trust.

Yup.

That's another area that will vary from place to place.

We have just flight paramedics on our helo's others around the state have nurses. It's rare that I see a doctor flying around. Most of our Paramedics have Critcal Care training, which is pretty extensive.

Because if the person who is injured could suffer from more dammage by ambulance than with a heli.
Sometimes the injury is so bad that the victim has to go to another hospital with greater knowleadge on that kind of desease.
Or the nearest hospital emergency room could be occupied so that the victim has to go to a hospital more far away and there for using the heli to save time. The ambulance does not only put an injured in the ambulance and leave as sson as they can. They often wait until the persons health has been more stable. after CPR and so on.

You cannot get CELL PHONES with that scanner. You can, however, get cordless phones with it!
snake wrote in message <3A2C45FC.A72F1356@prodigy.net>...
hello, i own a radioshack pro-91 handheld, does any one have any tips on how or if it is possible to receive cell frequencies on it ? what does the term mirror image mean?? is it legal to hear these frequencies??? thanks in advance....

Can't be done. By Federal Law, the PRO-91 is manufactured in a way that
makes it almost impossible to modify to receive cell phone frequencies.
But why would you want to, anyway? Nothing interesting to hear, and
most cell phone transmissions are digital instead of analog, which means
you couldn't hear them even if you could tune to them.

He was a fairly regular participant in these newsgroups ... I didn't use the best of judgment and trusted a total stranger.

I've been online for over twenty years now - and haven't been burned many times at all.

>> What is this persons name?

It would serve no real puspose to reveal his addresses, name, and home telephone number. And he's out of state, else I'd drop by his residence...<grin>

The lesson I learned? Use COD UPS for transactions that cannot be handled otherwise (someone I REALLY know, and can trust ... someone who doesn;t take credit cards ....). If the seller doesn't want to ship it to me "my" way, then the deal isn;t all that important.

I suggest you buy a NMO-150 antenna and cable kit from Radiall-Larsen
and cut it for 160MHz. The cutting instructions are in the kit.
This will give you a 5/8 wave antenna that is peaked at 160MHz. Even
better is to have a ham friend tune it for 160MHz with an SWR meter, by
cutting it to the length that gives the lowest SWR.
N7DAL.

The Larsen literature specifies a whip length of 43.25 inches
(109.855cm) for 160MHz.

The only problem with tuning it via the SWR method is that it would
require transmitting on 160MHz, and that isn't legal on any ham band
that I know about. Of course, with low enough power, who's gonna
know? An alternative method might be using an analyzer such as an
MFJ269.

Listening to scanners I have always wondered why when there is a bad accident they call for a medical hospital for runs that an ambulance could do in a shorter amount of time? For instance here in Omaha there was a bad wreck about 15 miles from the trauma center. Instead of putting the victims in the ambulance,where they could have gotten there sooner, they call in a Medflight. When they call in the Medflight the ambulance personel have to give the word for the chopper. So they have to wait for the chopper, chopper has to wait to land until the firemen give the ok,load the victims and then return. I understand it is the way to go when you are a farther distance away but why when the ambulance could get there sooner? I never could understand that.

David,
Good perspective! Unfortunately, the move of many of our local agencies to 800 MHz has been pushed ahead faster than necessary in response to the tragic Columbine High School shootings. One of the complaints was a lack of inter-agency communications, and the response has been to moving everybody to the same band. And the lawmakers were happy to hasten the process.

They had to do something, whether or not it was the right thing. But it has been proven that a wholesale switch to 800 MHz in the mountains is likely to not cover the same area adequately.

That's probably a good explanation unless I hear otherwise. It sounds like it could be a MDT signal, but I'm not sure. They already had another frequency for that, though, so I don't know what the deal is.

The (discontinued) BC-890XLT had one. Only went up to 99 hits however. Also was plagued with birdies. An OK scanner for rural users but TERRIBLE for city and suburban dwellers! Average used price $75. Early production runs could be modified for cellular by removal of one diode.

Source record: 74813

Digital phones are digital mode. But all are at least dual mode analog/digital, they have to be or they are useless where there are no digital towers. Most people don't stare at the display when they are talking so they don't see the switch.

Long and short, sure you can hear it, sure there is a lot of activity. But it is BORING! For every second of listening that you might get that is exciting you are going to spend hours and hours listening to people asking each other to pick up a loaf of bread and a quart of milk. Why bother when you can listen to a police freq. or an ambulance freq.? or even a airport tower? If you want mundane, find some local ham repeater frequencies, or the FRS frequencies, which can actually be a hoot, I had five kids about six blocks over playing cops and robbers and that had more entertainment value than cell any day.

BTW, I live in Canada and own a scanner that is not blocked in the cell bands, I have been there, and I know, it is boring with a capital B. if you are looking for the thrill, go to a cheap burger joint and eavesdrop on the two women in the next both bitching about there husbands, it'll cost you a couple of bucks for a plate of fries and a coffee, a lot less than an unblocked scanner off of ebay, and you won't be hungry when are done, of course, I can't say how good this will be for your digestion LOL.

Anyone here who knows how to unblock scanners, or where to find out likely lives in the US, where disseminating that information is illegal and therefore they are unlikely to give it to you here. The rest of us are not hindered by the same laws, but we can also buy scanners off the self that do the job, so we don't know or care. So save us all a little download time and use a web search engine, or some other forum to find this info out. I have only been on this newsgroup a month or two, but the requests for unblock mods and unblocked scanners for sale is getting old and tired already.

A quick web search I just did found a couple hundred hits on this topic and I would post it I thought it would help but it won't will it? I bet I have just started a request thread for it though LOL. In fact if no one replies to this message asking for the list or emails the same I might just die of shock. OK, maybe not, but I will be stunned and amazed!

I have HEARD the best time to listen to cell phones is late at night
when the bars close. Couples get into arguments and guys call those sex
976 lines. I think I would get more excitement from hearing coworkers at
Walmart on the radio or taxicabs.

The ARRL, America's Rotten Radio League, screwed us over a year ago. Cancel your membership before they screw you again. The ARRL board of directors wants to turn amateur radio into CB! If you cancel your membership the only people the ARRL board of directors will be able to screw is each other. Just wait, 13 months from now the CW bands will shrink, and CW testing will be ended. Thank you ARRL for turning our ham bands into SHIT!

I'd much rather live under our "fucked up constitution" than under any other government.

Besides, it's not the constitution which prohibits monitoring of cellular telephones, it's the misguided efforts of our duly elected officials. Those we elected made it illegal, and it's possible that we could elect people to make it legal again. If it weren't for our constitution, we probably wouldn't even have scanners. In many other countries, it is illegal to listen to anything but broadcast radio, amateur radio, or CBers.

But since it is illegal here, I cringe every time someone wanders in here and makes a post asking about modifying scanners to listen in to cell phones.

The cellular frequencies are very active. They are more active than all the other frequencies I know. Some people seem to think they are mostly digital and can't be heard but that's not true. I don't think most people know what the difference between analog and digital is in the phones unless they are interested in eavesdropping. In the ads they never list an analog phone as being analog. They list it as digital probably because it has a digital interface or something.

Clint
PayPal might have a system for dealing with fraud but your credit card company does. Dispute the charge with your credit card company and let them handle it. They have alot more influence with PayPal or the guys bank that the money went to and they handle this kind of stuff everyday

On most devices, the memory is provided with power with a small lithium button cell oftehn located right on the circuit board. My guess is yours has died. They have a 5-10 year life, so if your MVT-7100 is that old, that is probably what has happened to it. Find the battery and replace it.

For those that might be interested, I have posted a BC780 purchase survey on ScanFan.Com (http://www.scanfan.com). Basically it asks about your current purchasing interest in this radio. Already Ordered? Plan to order soon? Wait and see? Too expensive? No need?

I find it interesting that 41% of current respondents indicate that they already have the radio pre-ordered! Not a bad percentage!

If you would like to add your interest to the survey or would like to see where the percentages currently stand, please consider going to scanfan.com and selecting "BC780 Survey" from the opening page.

Thanks!

Ed

> But why eat pizza everyday when you can have sirloin?
>
> And you are talking about election. Just 50% of the people of the US voted.
> What kind of demo"cracy" is that?
It's called freedom to vote or not vote as one wishes. I don't agree
that one should not exercise that responsibility, but one is still free
to refrain. But then, he shouldn't complain if the elected officials
don't do or act as he wants.

> In my country, if only 50% voted, it had been a re-election.
> (the best part is that we get to now the result the same day, ALL votes

3856. Q: Cheap online stores to buy scanners, and a question about wideband scanners

Newsgroup: rec.radio.scanner
Date: 2000-12-06 00:00:00 UTC
From: Matt Annen <mpannen@students.wisc.edu>
Message-ID: <90msen$dn2$1@news.doit.wisc.edu>
Source record: 74724
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Where does everyone shop online to find the best deals on scanner radios? Also, I am in search of a scanner that will do trunk tracking AND have wideband, multimode capabilities. Seems that all of the trunk trackers don't have wideband capabilities. Any help is greatly appreciated! -matt

Well said! I also have been licensed a short time thanks to the no-code requirement. I don't really have an interest in CW. I have been very active in Public Service and Red Cross events, working several each year. It is a pleasure to be able to provide a service in our community and lend a hand when emergencies arise, as in the recent floods in our area and to provide other disaster relief. That is what ham radio is all about. John KC7ZBV

Simply cut a loop of wire, you don't even have to get near a diode with this one, and the radio is so simple inside a child could work on it, simplicity by Uniden! And a little bulb behind the display can be changed in about 10 minutes. It has lightening speed and it is so sensitive you can put it next to any other scanner and with equal antennas I would bet it picks up more action. Very under rated scanner that can be found for as little as $75.

Well Rick,

I recently upgraded to General because of the license restructuring. I
have found HF to be very enjoyable. Not a soul has asked me if I learned
20wpm or 5wpm code, in fact I haven't talked to anyone yet that really cares
whether or not I did. Since getting my Tech Plus in '99 and the General this
past August, I have rag-chewed with many wonderful people. I feel sorry for
people like yourself that carry a chip on their shoulder.

How heavy it must be...

http://members.ebay.com/aboutme/i-ownit.com/

This is a RELM model HS180 black handheld scanner. It looks similar to a cellphone in size. It comes with a "stub" antenna for short-range scanning use.

It has 100 channel storage capacity, a scan feature to scan all programmed frequencies, an earplug jack, AC jack, and a belt clip.

This is approx. 3 years old and was purchased new then. I have used it maybe 4 times at NASCAR events and it works GREAT! It requires 4 AA batteries (included!) and it can use the rechargeable ones as well.

I will include the box and paperwork that I have with this. Winner pays $5.00 shipping. Insurance Extra.

That's odd. I thought that the ARRL did everything in could to keep the status quo. In fact, some "Ye Olde Fahrtz" of the Ancient Radio Relay League are trying to get the FCC to go back to the old code testing scheme.

Thank You Raymond,

On the other end of the spectrum, I am not a big advocate of CW. It is a stumbling block that I haven't been able to overcome. However, I have interests in home-brew, repair and digital modes. I spend a good bit of time answering questions for other hams on areas that I do understand and even more time trying to get a better understanding of things that I don't. I also try to promote the hobby to others in a manner that is not over-bearing and from a god-like stance. I feel that the license is just a key to the door, and the new ham can take which ever fork he or she chooses after entering the realm Amateur Radio.

Now, more than ever, we need to be more gracious about extending the invitation to out ranks to replace the numbers that we have lost to attrition and attract the technical minds that have been previously turned away by the direction the League has taken in the past. I have been licensed less than 10 years, and have grown up in the shadow of Ham radio; only having a shot at it since the code requirement was dropped for entry level. I have made contributions to the hobby in many areas, and will continue to do so in the future; despite my lack of CW endorsement. I would also go the limit to support your love for CW as one of the freedoms we enjoy, on the merits of freedom alone.

I hope we can be more aware of the jealousy the industry has for the spectrum we have been awarded, and the value on the open market for it at FCC auction. If we don't do something soon to keep the numbers and usage of our current spectrum in the high percentages, it will soon go the way of the 1 1/4 meter bandwidth we lost in the beginning of the auction period. This period is still in effect until 2002 when the FCC can petition for an extension. Many among our ranks aren't even aware of this peril, and choose to ridicule others that bring it up. It needs to be in the forefront, as a constant reminder, and a level-keel approach needs too be maintained in the future.

A change in the Scope or Magnitude in the testing procedure does not necessarily mean a loss of integrity for the hobby. I would be in favor of a more in-depth technical requirement if the CW is dropped from the roster as a result of the meeting in early 2001. As it stands, CW is no longer an issue with the ITU, only the IARU; where the ARRL is the only member that still advocates it's inclusion as a requirement. That in itself is a bit of an embarrassment, as well as an open defiance to the numbers that their own internal polling yielded as early as 1996 concerning their stance on CW as a requirement.

We should hope that the League will strike a pose that is representative of it's supporters before it "stubborns itself out of existence." We do need a representative body to protect our interests, and sometimes we have to get their attention when the direction they choose to take is contrary to our continued existence. Let's hope that the result of current process of petitioning the ARRL for changing their stance in the IARU in the 2001 meeting doesn't result in a quagmire such as the one the 2000 presidential election turned into. The jury is still out on what negative effects will result from that example of "what one person trying to out stubborn the other can do" .

As long as we all maintain an open mind, and "keep out eyes on the prize", we will prevail.

Not so - there are plenty of digital-only phones out there. Some of those models can take an analog add-on accessory but don't have them as a base feature. Lots of people only use their cellphones within digital zones and indeed are limited because of it.

I did a search on the Percon website (probably the best frequency database there is), and I found tons of 800mhz freq's in use in Fairfax County. Check out their website at http://www.perconcorp.com/datafinder/index.html and do a search under "FCC Databases - US Frequencies". You can search by all kinds of things, like frequency ranges, agency codes, specific frequencies (you hear someone talking on a freq, but don't know who it is...)

Definately worth looking at.

Franklin police, fire units now wireless
By CARLY HARRINGTON
Staff Writer

FRANKLIN - With the support and financial backing of city leaders, Franklin Police and Fire departments are the first in the state to be fully integrated with an advanced mobile data communications system.

In seconds, public safety officials are able to receive and transmit critical information to and from the field, including running drivers' licenses and vehicle license plates, checking for arrest warrants and even dispatching.

"Other departments in the Southeast may have computers in their cars, but they do not have the full capabilities that we have," Fire Chief Don Claiborne said.

This month, Cellular Digital Packet Data modems will be operating in all 10 of the city's fire trucks and about 80 patrol cars.

CDPD is an efficient and secure wireless packet data technology that provides instantaneous response because there are no dialing delays. Built-in encryption maintains security.

Through what looks like a laptop computer, an officer or firefighter can, with a touch of the screen, access a person's medical records or detailed maps that show street addresses and even the location of fire hydrants. They can find out if there have been any previous calls to a particular location and monitor what other units are doing around town.

"It lets responding units have a heads-up," Claiborne said. "It really enhances the safety of our people. They get a more informed response and a more informed approach."

Officials expect the technology to save more lives while increasing the number of arrests made and the recovery of stolen vehicles.

It also will reduce radio traffic by as much as 40%, easing the burden of multiple calls and time delays.

Earlier this month, the city showcased the technology in San Diego at a conference of the International Association of Chiefs of Police, the world's largest organization of police executives, with more than 17,000 members in more than 100 countries.

In California, they displayed real-time patrol activities occurring in Franklin.

"We were running live from inside the expo center to Franklin," Police Chief Jackie Moore said. "This is cutting edge."

Eh, Mr. Oofssufsd.org.....

Is all this gibberish an attempt to add an atmosphere of legitimacy to your post by making one believe this is a language, and therefore an attempt to reach a broader audience? I do thank you personally for this information, however. You see, I was planning of doing most of my Christmas shopping in Syria, but now I'm going to seriously reconsider my proposed course of action.

In article <90b745$247o$1@newssvr06-en0.news.prodigy.com>, ALEX J
JENTILUCCI <alexjent@prodigy.net> writes

>Anyone familiar with this? Claimed to be same as AOR2001.
>I have a chance to pick this up.

MX5000 = AR2001 (Black case, membrane keypad)
25-550MHz, 20 channels

MX8000 = AR2002 (Fawn'ish case, button keypad)
25-550, 800-1300MHz, s0 channels

The MX-7000 was a "bit of both" - it had the extra 800-1300Mhz coverage
as with the AR2002 but housed in a grey case with the MX5000/AR2001
membrane keypad.

The membrane keypads for the MX5000/7000/AR2001 are no longer available
from AOR with all spares stock being used.

>Good, bad or ugly.

Certainly a very good receiver - by todays standards though as a
"scanner" it has few memory channels and scans slowly. Ideal though for
monitoring just a few channels though.

>Value????
>
>Where can I see the specs?

Basic specs were:

25-550Mhz, 800-1300MHz
20 channels
1 search bank
AM, NFM, WFM
5, 12.5 and 25kHz step sizes
Two scan speeds - slow, not much faster

You can download the basic operating manual from the AOR UK web site:

http://www.aoruk.com/manuals.htm
http://www.aoruk.com/pdf/20012.pdf

The AOR Japan web site has a section of some of their previous models:

This is an example of what self-regulating conditions is about. Some problems tend to cure them selves and go away without intervention.

This is the epitome of the concept "My father beat me when I was a child, and you're Damn right, I'm gonna beat my kids too".

No body mentioned taking disipline out of the regiment of licensing requirements. This is the reason that Ham radio faces the current peril it is experiencing in shrinking numbers and likelihood of spectrum privileges to match the numbers. Any attempt to allow transfusion of new technical lifeblood is viewed as a fatal stab wound.

Take your anti-US crap elsewhere. I'm not putting down your country or its government, whichever country that is.

You obviously have little clue about American politics. Nor should you need to be concerned. Why are you concerning yourself with our elections? What does it matter to you whether Bush or Gore is elected if, as you claim, that both candidates are bought by corporations? Or are you jealous of the right to vote, or not to vote?

Regardless of who is elected, our country will still survive and remain THE superpower on the planet.

Hey Bud,

Why don't you guys in 6-land start by
cleaning up the MESS on your 2 meter
repeaters in SoCa? Heck, I ain't heard more
unlicenced spanish speaking bootleggers on
the air, even on the high end of 20M band!
.

It's already spiraling downward Bill. Not by a present lack
of operators or technology, but a minus growth of new Op's.
What kid tell me want's to speak on a ham radio and use 9600
baud packet radio when instead they can be
on the Internet with 56K or DSL, streaming audio and
video, realtime chatrooms and who know what else
is comming sown the supply chain? Heck, for under $600.00
I can have a 700 MHz Multimedia machine that will do
everything short of put the coffee on in the morning. (and when
the next generation of Internet ready consumer goods hits
the market I will be able to do that too) Contrast that to
a Radio Shach 2 meter rig that's busy with redundant "drive
time" talk and totally dead airtime the rest of the day to
keep one amused. Guess what the young people will choose
Bill? Hey, it's ok. Hamfests are drying up on the vine and
Dayton attendance is way down. The writing is on the wall
Bill----> Ham radio is obsolete because it's CORE PURPOSE
for existence is no longer relavant. Sure if the power goes out
we can pass some traffic, but that's about all. The bulk of
support now goes to private and professional emergency management
authorities, for whom ham radio is a non-productive obsolete accessory.

I am about to make the diode mods to my PRO-2005 and was looking for a bit of clarification:

1) The silkscreen legend on the PCB is a bit unclear. It appears that D503 is the top diode, with D501 the lowest diode, and D502 just above D501. Could anyone please verify the actual placement of the diodes? (i.e., top to bottom, the diode numbers are..503, 504, 502, 501???.).

2) Once the 800MHz diode is clipped, does the LCD display actually show a 30kHz step? Do I need to add another diode (D504?).

Thanks for any assistance that you can give!

Bill,
It would seem you don't have a basic understanding of the differences
between a commercial radio license and an amateur one. We as amateurs
are allowed to build our own equipment without restrictive certification
requirements imposed on commercial manufacturers. This is the major
difference that sets us apart from other radio services. Without this
one major difference we are just CB.

Did you actually watch the film, or are you just quoting that without watching? Kevin Kline portrays a dumb American in the film and the character is *not* very flattering to Americans. In that context, the above is a good choice of words because it represents a typical "dumb American" thing to say. But the filmmakers are making fun of the character....

You know, I DID try to get something done.

It's not the Spanish that bothered me, it was the profanity and complete
lack of rules on several high-powered, well-positioned repeaters up
toward L.A..

I was told but SANDARC (sp?) that they weren't willing to take action
against those systems, because if they WERE to get them shut down,
the users there would get on other repeaters (club systems) and do the
same thing.

I pretty much quit using my license after that.

Yes, I did watch the film and enjoyed it immensely, having lived in England for a while. I ran into a few American tourists who I'd wished I didn't. They expected everything in England to be exactly like the US, which it definitely is not. Some of them asked me why, if I'd been living over there, that I didn't have a British accent... I was over there for only about 2 1/2 years.

Perhaps using Otto's comment wasn't the best quote, but it was used in an effort to inject a little humor here. But regardless of Otto's character, he does have a point. If it weren't for the US getting involved in WWII and the cold war, the world would be a very different place today.

sounds like you are an extra class operator who is scared he lost the elite status you felt you had cause you could do something not everyone else could do poor baby if you restrict the bands like that the hobby will die and everyone will lose a lot more than your elite status of being an extra class operator

Thanks all for your advice. I had a look inside and had a tinker with the rectifier and the two smoothing cap arrays alongside. I resoldered a dry joint on one and the humming reduced to a better level.
I've tried to get a circuit diagram for the set but the UK Tandy site is closed (probably due to Carphone Warehouse take-over) and the US Radio Shack site just show a parts list and an exploded diagram of the set. If anyone has a circuit that they could scan in and email I would be grateful.
Thanks, Dave.

No where in my post(s) have I ever advocated or will advocate in the future
that there should be any lessening of the technical requirements of the
exam.

Spin me a little, but don't make me dizzy. OK?

> Before you buy

On the 2005 there are 2 diodes present on the board behind the display.
One is for the full 800 MHz coverage and the other controls the
scan/search speed. On all 3 of my 2005's over the years I cut both. The
scan and search speed increases noticably without changing the scan
delay time.

The 30 KHz channel spacing is the default for both sections of the
Cellular band (Mobile and base). The radio will allow one to change the
step size within the cellular band to any of the other sizes, but only
the cellular ranges will allow 30 KHz. spacing.

The 2004 had a whole lineup of diodes (Some installed, some not), one of
which eliminated the 30 KHz. spacing in the cell band. While I don't
remember which one it was that did this, I imagine there is a similar
diode someplace on the 2005. I wouldn't suggest doing this though.

Yes, I've decided its not worth the trouble.

Even though, other microprocessor driven scanners have been modified
by lifting a certain pin off the circuit board and attaching it
elsewhere, I just dont have the information to justify the risk.

Easier to buy a Pro43 :)

Yes! I do! England and Scotland!
> And if the companies of the F**king US of A(sshole) buy Mr Bore and Gush
> (joke). Where is the democracy in that?
> You tell me!

The United States is NOT a democracy, it is a republic. It is a place
where I can stand right in front of a public official and tell him I
don't like him without being arrested--unless I threaten him/her. Com-
municating threats is illegal and he/she gets the same protection as
any other US citizen. Companies don't "buy" elections. They have in-
fluence, but it is STILL one citizen-one vote. The Florida thing has
never happened before, and the contests/legal challenges are simply
because one man just won't give up (Gore). Yet, he has the right to
undertake these challenges futile or not.

Mock if you like, we don't care. I just wouldn't stand on the deck/visi-
tor center of the USS Arizona and do it. Seems a certain group of Asian
tourists did that once. A man whose father died on that ship witnessed
this and proceeded to throw a couple of them overboard! For a time,
tours were "segregated"--no Americans with that particular group--don't
know if that is still true.

I have both amateur extra and commercial first class licenses, so I guess I do know the difference. "Allowed to build" is far different from "required to build". It would seem you don't have a basic understanding of the difference.

No but because of your constitution i have been listening to CRAP on the news for several weeks now.
(I dont know how Your geography is but you have a state called Florida who really f***d up)

I really think we should let this discussion AND the discussion about "mobile phones" that is of tracks, be held in

rec.usa.asswipe

And discuss real SCANNER things in here as we are supposed to!

Cheers to the group.

yea no shit...I had to take a 20 wpm cw test to get my extra class license
now you can get one with just 5 WPM why even bother that means you just
have to learn the chatacters and pass the written tests amateur radio has
gone to hell in a handbasket and I probabally won't even renew my ticket

As I recall, ham radio was 'doomed' because of incentive
licensing when I got my license in 1970. Then later it got
'doomed' again because of the VE program. Actually, it
seems that ham radio is 'doomed' anytime there is a change
in the rules. This has been going on since the loss of
spark privileges.
Time will tell.

>
>

I'll make a reply to that sans anonymity.

I get a chance to meet other hams personally when they need some hardware help, or at hamfests where I tailgate from time to time. It is a toss-up on classification. There are Hams of all classes that don't know which of the iron not to stick in their mouth, what type of coax to use above 50 Mhz, how to put a connector on a piece of cable, how to make a dipole, how to read a schematic, how to draw out a circuit, how to predict a satellite or shuttle pass, why not to look directly into the laser with the remaining good eye, mathematical relationship between wavelength and antenna length, how to check and set swr on a mobile antenna, what swr is..... and the list could go on for days.

Many, if not all of these items are addressed in the various examinations that they had to pass in order to get their license. However, the main focus on their operating ability has been measured using CW as the yardstick.

It soon becomes clear how this yardstick has ended up selling the expansion and continuation of the technical end of ham radio short.

If you get a chance to go to a hamfest, check out how many tailgaters have hombrew items, and talk with them about what does and doesn't sell. Also ask them what anything they are offering does and how it is used in a circuit. Then ask them how often they use CW.

I'll venture a guess that you will find hombrew and non-turn-key vendors to be in the minority, very much aware of the technical end of the hobby, a dying breed and not very concerned about CW. Even though most had to pass the Morse element(s) for their ticket, they would be much more excited about the aspects of a Tech "Lite" building their own accessory items, using a transverter that they hombrewed, building a high gain antenna for use where they can operate, buying special purpose soldering accessories, displaying interest or knowledge on the different types of wire insulation, or coax types.. and any other aspect of the dying technical end of the hobby (or Service as it is supposed to be known as).

I personally have no need for CW. At one time, I wanted to be more active in EME, but I turned to meteor scatter and other esoteric modes to fill that void, modes which used what I knew and had gear for. The non-coded license holder has use of spectrum that numbers in the Hundreds of MHz, tens of GHz; as opposed to the coded and coveted 7 or so Mhz that is locked up by CW.

4 to 8 hour QSOs with every nationality and virtually 1/2 to 3/4 of the earth are possible with QRP power levels via AMSAT Oscar satellites. Repeatability is also a factor; one that can be counted on. There are few random contacts. Using the birds show a prowess in the use of 2 bands simultaneously, understanding and compensating for doppler shift, effect of the horizon on communications, mathematics of prediction of orbiting bodies......

I know how disheartening it is to the CW advocates for some newcomer to make more international contacts, in the rarest of locations and with the most repeatability and reliability; using spectrum that was considered to be line of sight only and thrown to the dogs who couldn't pass muster on Morse requirements.

This goes against the grain of all who support the "get CW and work the world" concept of Ham radio. CW and HF have proven to be invalid as measures of cost and reward among our ranks. That doesn't mean that neither have merit or value; just not in the proportions that merit and value has been associated with them in the past.

It requires far more preparation, operation skill, understanding of propagation, integrity of station integration .... to be able to make weak signal contacts above 50 MHz; something that is possible for anyone entering the ranks through the no-code door.

Maybe this is the view of the future; the most technical minds will revitalize ham radio due to the modernization of the licensing requirements; thus making Ham radio a viable option for generations to come.

One thing for sure, if attrition continues to take its toll, it will just be a mater of time before discussions such as these move from the realm of reality to the realm of philosophy.

More to the point, when did it change, and how many of those licensed
more recently can't, as a percentage of their total? It's huge, from
what I've seen.

Why are you clowns blaming ARRL for the "doom" of CW as an amateur mode?

Are you completely unaware that the League is the ONLY ham radio society
that consistently votes AGAINST eliminating the Morse requirement at
international conferences? Do you realize how far out of step the United
States amateur community appears to be to the rest of the world?

Where have you been when part of 220 and just about everything
over 1.8GHz got, or is in the process of getting the chop as I type this?

Ever hear about "Bluetooth" - a new standard to link just about
every consumer product via wireless. GUESS WHAT PAL
IT'S ALREADY DEAD AS FAR AS HAM RADIO IS
CONCERNED.

Better re-read Wayne Green's old editortials, he's right on the bullseye.

Noble thought but dead wrong in the implementation. Tests today require
no technical knowledge whatever should that be the route to the license
preferred by the applicant, and why shouldn't it be? The idea that code
free or technical knowledge-free licenses will draw a influx of
technical talent has been soundly
disproved by the history of the past 10 years.

I take it you haven't taken an Extra written exam lately then?
Wouldn't figuring complex impedances, antenna lengths, etc.
count as technical?
Admittedly, it's not as technical as drawing schematics of plate-modulated
final stages, but the average non-technical fellow is still going
to have to study quite a bit for an Extra exam. These days, with
radios out of the box, the need to be a GROL too is much more limited.

The fundamental tension seems to be between those who wish to keep things
an exclusive club / preserve the past and those who feel that unless
we as a group move towards new technologies and higher frequencies,
we will lose our justification for existance. If the latter is true, and if
we ignore the threat, "they" will probably nibble off our
frequencies over years until we're down to 40 channelized frequencies and maybe
two modes (sound familiar?) So in other words, we become a CB service
if we fail to justify our existence just as much as if we lower standards too
far.

Now, CW is a fine pastime and I can't imagine why someone would
criticize those who enjoy working it, but we need the sort of techical
minds in the hobby who may not be interested enough in CW to otherwise
get in. IMHO, of course. :)

3957. Which Pro Radio Shack trunking scanner is the best

Newsgroup: rec.radio.scanner
Date: 2000-12-08 00:21:06 UTC
From: llson30135@aol.com
Message-ID: <20001207192106.21093.00000398@ng-fo1.aol.com>
Source record: 74602

Which Pro Radio Shack Scanner should I buy? Cost does not matter.
I am getting confused because I was told the 2067 or the 2052.
Which is the newest and best?
Thanks for any info.

3958. Extremely useful scanner info to absolutely everyone in USA

Newsgroup: rec.radio.scanner

Source record: 74605

First of all don't buy scanners from that damn Radio Shack. I mean geez I got a pro91 and it trunk tracks like shit. I get one liners with that. Even though there are better trunk tracking scanners out there don't go to Radio Shack for em. Instead get a scanner from a dealer with continous coverage. There are portable scanners out there that can be computer controlled to trunk track and do it better.
I got an all mode scanner(am, fm, cw, usb, lsb) AR8200Mk2B. Just cause Radio Shack is there and you don't have to mail order a scanner cause the store is near you still put those piece of shit scanners out of business. There is no reason for crap like that even for a beginner. You will get tired of those damn gaps fast.

Also I've been reading some amusing posts about cellular users and what they talk about. I find it entertaing to listen to welfare morons. Why wouldn't you find them funny. Some of you don't have a good sense of humor.

I used to hold a Radiotelephone First Class Operators License (it's
still here somewhere in a drawer). In order to exercise the privileges
that license conferred, when working on commercial radio station
equipment, I darn sure had to know how to solder. As I remember it, a
ham radio license was almost the same. Of course that was then, this is
now and it is all somehow different.

3961. Re: BC780XLT - Purchase Survey UPDATED INFO

Well, I guess at times, indeed, not all votes count! :)

Regretfully, for about an 18 hour period yesterday and today, the ihtml server of my host decided to take some time off. As a result, folks that submitted a vote to ScanFan's BC780 poll may not have registered. Anyone who voted between about 6pm Eastern Time on the 6th and Noon or so on the 7th, may want to consider voting again. Fortunately, to maintain the credibility of the information, the "system" is tracking who votes and will not allow more than one vote. Persons who voted while the system was not working were not tracked, therefore should be able to vote again.

For those that have no idea what I am talking abut, I have placed a survey on the ScanFan web page asking about your purchasing interest of the BC780. So far, percentages are showing that a LOT of us have already pre-ordered or are very close to ordering!

The survey can be reached by going to http://www.scanfan.com

Thanks!

Ed

What I have done is I have made a longer antenna. What you do is you
get a piece of coaxal cable and then do some cuts and strips to it.
You have to get a BNC connectior to connect it to your connector (Im
sure its the same for your scanner as well) Then I taped it up with
electrical tape onto a long slice of wood because it has to stay
straight. It has doubled my range!
If you want more instructions e-mail me.

3969. Introduction to Speech Inversion Descrambling

Newsgroup: rec.radio.scanner
Date: 2000-12-08 14:33:31 UTC
From: ctpds49@aol.com
Message-ID: <20001208093331.26282.00001822@ng-cd1.aol.com>
Source record: 74618

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

Don't be misled by the technical complexity that appears to be present
on the tests. It is an illusion.
If it was actually a test, instead of a spoonfed memory exercise where
ALL the questions with ALL their *exact* answers were prepublished
-*together*-, mind you- then you'd have a point. As it is, all anyone
has to do is download the question pool, which has with each question a
set of possible answers with the correct answer noted. All one needs do
is immediately discard all incorrect distractors and study the questions
with the remaining correct answer as pairs, read each set of questions
through several times, and go take the exam. The correct answers just
jump out at you-they are the familiar ones, the only ones you've seen
before, and the others are not. It's a no-brainer and unless you are a
memoryless dolt, you can't miss. Do it three times and you now have the
Extra class license, quite without acquiring any knowledge whatever, or
as near that as possible.
No, I haven't taken an Extra class exam since shortly after Incentive
Licensing came in in '68. What I *did* do is administer them for 8 years

as a VE team leader.

> Admittedly, it's not as technical as drawing schematics of plate-modulated
> final stages, but the average non-technical fellow is still going
> to have to study quite a bit for an Extra exam. These days, with
> radios out of the box, the need to be a GROL too is much more limited.

Somebody gotta know something about what all of us are doing scattering
all that RF around. Can you imagine a longterm Amateur Radio Service
surviving, and being supported, where few of its practicioners actually
know anything about what they are doing except operating the gear? You
really believe any FCC would or could continue to support it? Can you
say "history repeats itself" as on 27 mhz?

> The fundamental tension seems to be between those who wish to keep things
> an exclusive club / preserve the past and those who feel that unless
> we as a group move towards new technologies and higher frequencies,
> we will lose our justification for existance.

Someboduy here on the net keeps saying "Those who forget the past
forfeit the future". Nowhere do I see that exhibited more clearly than
in ham radio. No one has ever suggested that time stop or progress be
stimied. Nothing in all that suggests we should simply abandon
everything not of todays design.

If the latter is true, and if
> we ignore the threat, "they" will probably nibble off our
> frequencies over years until we're down to 40 channelized frequencies and maybe
> two modes (sound familiar?)

So why do you think "they" won' get whatever part of "out" spectrum
that is needed for the public good and commercial develop[ment anyway???
History tells us that is how it has been and will be in the future. Hams
got kicked to "200 Meters and Down" sinply because we were the way of
commercial development. Not that long ago we had access to ALL spectrum
above VHF. Look at what has happened up there in more recent years.
Nothing has changed nor will it. When it is needed, specrum WILL be
taken from ham allocations and probably not replaced. But FCC has been
really generous over the years in allowing USA hams access to parts of
the spectrum not needed or abandoned by commercials, so we probably will
pick up some more, especially in LF and VLF areas. Change is ubiquitous.
This is not a freeze-framed area, it is continually in flux. Anyone who
believes we can "preserve" out spectrum is selfdelusional.

So in other words, we become a CB service
> if we fail to justify our existence just as much as if we lower standards too
> far.
>

Licensing a service loaded with people who really believe that because
they passed some "tests" which tested little except their ability to
make word associations does little or nothing to keep the ARS from
becoming another CB, with an attitude.

> Now, CW is a fine pastime and I can't imagine why someone would
> criticize those who enjoy working it, but we need the sort of techical
> minds in the hobby who may not be interested enough in CW to otherwise
> get in. IMHO, of course. :)

So who said a single word about CW? This discussion is strictly about
the lowered technical requirements, which by all accounts some persons
of influence are working hard to see that they are reduced much further,
in fact all the way to none (W5YI for one).

What is really being objected to is you guys insisting that the "top rung" be dragged down to the "lowest level rung". If you can't see what that does to the the ARS then further discussion is probably futile. No one is saying that things should not change, now, in the past nor the future. But not all change is for the better, and much change that is made simply to appease the "squeaky wheels" is detrimental, as always. When protesters decide what the changes will be, what makes that automatically a positive thing? Take a look at Dick Mcullom's post on "Wet Firecracker Report" and see just what an "influx" the new regulations have had on total numbers of hams. If that is a precursor, the future doesn't look to bright for your goal of increasisng numbers of hams. I really believe that handing out free licenses on streetcorners would have about the same effect. None. Blame the 'net, that's where everone has gone. Including us.

I do believe things were better in the old days when "rungs" didn't exist like they do today. IMO there should only be one license class. You should have to prove you know enough to get on the air and not cause QRM around the world. Everything beyond that can be learn-as-you-go.

Unfortunately, a lot of hams like to view their extra class license as some kind of exclusive club they belong to, one which requires hazing of the unwashed masses in order to get in. Again, IMO, this is wrong, and discourages a lot of fine folks who would make good hams given a chance.

And yes, I do have one of those extras. Look it up.

3979. Need Help w/ BC-850-XLT

Newsgroup: rec.radio.scanner
Date: 2000-12-08 18:36:04 UTC
From: Travis Eiler <travis@speedthrillsracing.com>
Message-ID: <90r9qg$2q32$1@thoth.cts.com>
Source record: 74628
Cross-posted to: rec.radio.scanner,alt.radio.scanner

My aunt became very ill with liver cancer and while we were moving her
things out of her apartment I found a BC-850-XLT.

It looks like a nice unit, but I don't know anything about it and there
is no info on the Uniden website that I could find. I know a little about
scanners because I have a BC-3000-XLT, but what I know doesn't help get this
thing to work.

Where can I find info about this scanner?
Where can I get an owners manual for this scanner, file or hard copy?
What is the approx. value of a unit like this?
Will a unit this old be blocked for cell or anything or will this be wide
open?

She also had an antenna with it that looks radical. It appears to be a
poll mount with U-bolt to a piece of angle iron. The antenna is a array or
3 wires/rods approx. 24 to 30 inches long spaced 120° around the axis and
45° up from the horizon, and another array of 3 wires/rods approx. 10 to 12"
long spaced 120° around the axis and 45° up from the horizon but the smaller
array is offset approx. 60° from the larger array. Then there is another
array just like the antenna which I believe is the ground plane but instead
of pointing up like the antenna they point downward. What is an antenna
like this called? With all the different wires I would think it is only
good for receiving, not for transmitting with a ham rig, is this correct?

Thanks for your help,

Travis Eiler

To remove any doubt, the remarks were made with my tongue firmly planted in my cheek. As a confirmed homebrewer I can assure you there are soldering iron burns on both the workbench and the carpet!

My present rig is a modified Heathkit VFO converted to transistor operation feeding an SB10 I assembled for use on a DX100 in the 60's. This drives a pair of 6146's which feed a pair of 4-400's (Both pieces homebrew) when I need a bit of a kick. My receiver is a purchased Collins 75A4 with an outboard DSP homebrew unit.

> Could anyone please verify the actual placement of the diodes?
From the top, they are D503, (blank), D502, D504. To enable cellular, clip D502.
The second space is just that - a space. It was never used in production models of the Pro-2005. Some postings call it 'D501' and claim that a slight speedup can be obtained by inserting a diode here, but the actual D501 is part of the restart circuit elsewhere on the board.

> Once the 800MHz diode is clipped, does the LCD display actually show a
> 30kHz step?
The 30 kHz step is the default for the cell band. If you use the "step" key to check the other values, you'll find that 30 kHz is not on the list. Pressing "reset" will restore the default.

> Do I need to add another diode (D504?).
D504, if installed, would actually disable the 30 kHz step, as D502 disables cell and D503 disables a slightly higher scan speed.

I think its quite odd that I have held an Extra for over 30 years and
so far I have yet to meet a single Extra that fits your mold. OTOH, I
have met manyh, and been one, who have done everything reasonably
possible to help newcomers get into the hobby. Including starting up a
VE team, the only one in the region, and running it for eight years,
until it virtually licensed so many other hams who eventually started
their own teams and the ours became redundant, so it closed shop.And I
didn't just run a VE team, I operated under the philosophy that getting
a ham radio license should be no more difficult than necessary. But the
open question pools are a travesty indeed almost fraudulant. Why pretend
to test complex subject matter when no actual learning is required to
pass any of the tests?
The fact that I and some others know that radiotelegraph code remains a
viable and effective while simple, easy to implement mode of
communications which can be used most effectively within ham radio, even
though its use has been abandoned by other services, seems to be the
main sticking point. Anyone who supports code and any sort of code test
within ham radio is automatically a target. So be it.

EBAY ITEM # 1200474241 AOR 8000
New AOR 8000 scanner-communications receiver.
This is a "U.S. Govt / Export" version "A" and
has NO frequency restrictions. Included
(internally in unit is gov't descrambler board),
Coverage is 500Khz to 1900Mhz. IN ADDITION this
radio is equipped with the voice descrambler
board (for those impossible to hear scrambled
cordless conversations) and will ship with the
the computer interface and cables to allow the
radio to be controlled from your computer.
Reception modes are AM, NFM, WFM, USB, LSB, CW.
For complete specifications please go to:
http://www.aorusa.com/ar8000.html , but remember
this is a "A" model with no coverage
restrictions. This is a rare find with the
descrambler board and computer interface. This
radio was over $800.00 originally. Money Order or
Cashiers Check accepted. Buyer to pay $20 for
shipping and handling. GOOD LUCK!

Sent via Deja.com http://www.deja.com/

The PRO-91 was made by Uniden, not Radio Shack. Radio Shack doesn't
make ANY scanners. Uniden also made the BC245XLT, one of (if not THE)
the finest trunktrackers in the world. Your AR8200 can't trunktrack, which
would
make it useless for monitoring Police, Fire, Medical, County, etc. in my
area.
Radio Shack also sells the PRO-92, made by GRE, which also made the
PRO-2004/5/6 scanners, the most sought out scanners in the USA. By the way,
these can be easily modified.

So if Radio Shack starts selling AOR products, your radio would suddenly
become something less?

Importing a continuous coverage scanner to the USA is illegal and you
can be arrested and/or heavily fined for trying to do so if you are caught.
Just recently, I read a news report saying multiple illegal scanners had
been stopped by inspectors. I haven't read the final outcome of the
pending court cases but I'm certain anyone caught will be made an
example of. Worth it? Not to me!

I particularly enjoy listening to the Police (which is legal here) arresting
people
who break the law. :-)

In my area there is a trunked system in the 400 to 420 mhz range.. I was going to get a scanner so I could listen to this [not my first scanner. I have several] but I read that the vhf and uhf trunked stuff is almost impossible to program due to the scanners needing more info, such as trunk repeater imputs and other stuff.. is this true? I was wondering if maybe this was true but the newer scanners got around it.

Bill Cheek wrote three scanner modification books filled with modifications
for these
three scanners. You can add computer interfaces (Optoelectronics, CE-232,
PROgramit), modify for cellular reception in about 1 minute, add more memory
channels (one of Bill's mods increased the memory to 6,400 channels), add an
S-Meter, CTCSS Decoder, automatic tape recorder switch, increase the speed,
DTMF Decoder, SCA Decoder, Data Tone Squelch, Adjustable delay, and even
managed to modify them for trunktracking. I left a number of mods out but
I think you will now have an appreciation for why they are still so popular.

Here's a website to check out if you are interested:
http://yourpage.blazenet.net/pro2006/

Have fun,

Robert

Gee, I wonder what you were trying to improve?
These things are made by GRE. They will improve
weak signal work IF you aren't trying to use them in
an RF-saturated environment where the only thing
you will accomplish is blast the front end of your
Saturday-nite special scanner into de-sense!
READ.... Too Much Signal=Less yer gonna hear.

Fred,
Scanner crystals for Regency and Bearcat scanners can still be obtained through your local Radio Shack store. I just ordered two crystals today, in stock in Fort Worth at Radio Shack Unlimited, (confirmed by the store manager, who called RSU via their special store number), shipping time 5-7 days (but was warned that delays are possible due to the holiday mail load).

Just get some new electrolytic capacitors, Of the same type, mf rating, and voltage. If you can get bigger ones in there, then by all means, put them in. Just be sure the voltage rating on them is as high or higher than the original, and that you observe the polarity of the cap when you put it in. In the power supply circuit, the value of these is not at all critical, just so they are a large enough value.

Selling Uniden Bearcat 245XLT Trunk Tracker II Handheld Scanner. The unit is approximately one year old and is in excellent condition (i.e without scratches or dings). I am a non-smoker and have not used or operated it in a harsh environment. It comes with all accessories (listed below). I have the original box and manual. I will pack it carefully for shipping.

Features:

300 Memory Channels
12 Bands, 10 Banks, including Aircraft & 800MHZ (NOT including Cellular)
Smartscanner allows you to connect the scanner to a PC or modem to dial into a 900 number for programming. No need to manually enter frequencies.
Back-Lighting
Unit-To-Unit Cloning to transfer frequencies from one 245XLT to another
PC Controllable using optional third party software
Pre-Programmed Service (SVC) Search for police, fire, air, emergency frequencies
Trunk Scan And Scan List to allow you to monitor the newer radio systems
and more!

Includes:

Rubber Duck Antenna
Belt Clip
AC Adapter
Battery Pack
Earphone
Operating Guide
Trunk Tracker Frequency Guide
Remote Interface Cable (Serial Connector

Plus:

MetroWest compact 800 MHz antenna
Uniden carrying case
Uniden battery charger and extra battery pack

$175 shipped anywhere in the US. Money order or Cashier Check.

Thanks,

Victor Trucco
Portland, Or.

Hey all....

Has anyone heard how the trunktracking will work for the LTR systems on this fine radio? I certainly hope it wont be like the (Un) Pro 92. Will it be just like the EDACS/Motorola in the 245? Also I am presuming that 5 second delay is not going to be around.

Tim

The only one that I have found that didn't hum is an old PRO 2010.
Still use it daily, even though it is very slooooooowwwwwww and doesn't go above
512 MHZ.

> And yes, I do have one of those extras. Look it up.

I have one, too. I got it in 1984 when we had to be tested by the FCC
directly. Enough of the good old days.... :-)

I think license class would be a better measuring stick and a superior
justification for privileges if it were based on what one DOES WITH their
license rather than - or in addition to - how much one knows about
mathematical formulae that can be easily applied by software (ie Smith
Charts and the like).

Some more involved awareness of technology could be mixed into the criteria
for "advancement" as a ham operator and would undoubtedly make some small
contribution to the "technical expertise" justification for the continuation
of the amateur service. But brain-bending theoretical knowledge is not a
primary or even a necessary part of amateur radio.

I think if we look at the "Basis and Purpose" portion of Part 97, however,
we will find that it mentions a reserve pool of trained "operators" and not

just radio repairmen. OPERATION does not involve the kind of technical expertise that is required to design and fabricate integrated circuits or to write computer programs to handle digital communications. It does provide the opportunity to make amateur radio useful to our communities instead of mere entertainment for us hams.

Have you done any research on your own, or are you expecting everyone on
Usenet to spoon-feed you? There are several programs already available
that decode the datastream from Motorola trunking systems (and surprise,
surprise, some programs can do EDACS, too). There are websites that
contain all you could want to know about trunking.

Perhaps you should make the acquaintance of a search engine, like AltaVista,
Lycos, Yahoo!, or one of many others available.

4039. Hamtronics CVR-806 Converter ?

Newsgroup: rec.radio.scanner
Date: 2000-12-09 23:09:18 UTC
From: Arthur Davis <artellad@hitter.net>
Message-ID: <3A32BB9E.FDA7031@hitter.net>
Source record: 74588

I bought a Hamtronics CVR-806 Receiving converter at a flea market today that didn't come with an instruction sheet. The bottom says "subtract 382.000MHz" so I assume it a converter to bring 800-900 MHz frequencies into the range of old scanners. The main problem I have is how to power the unit so I can test it. The two antenna connections are self explanitory, but there is a single black wire (about 18 inches long) coming out of the "RCVR" coax grommet that is danglong and is connected to on leg of a transistor inside the case. The PC board number is marked "Hamtronics CA-432 UHF CONV". How do I power the unit and could someone tell me what the specs are? TIA, Art.

Hi Seth,

I had the exact same problem but kept restarting the download several times till it finished. Thank goodness the download program always restarts the download from where it was at the time the connection was lost.

Don't bother with it. When I finally got the zip file in my computer it does not unzip. I have a very current zip utility. I do not remember the exact diagnostic but all I could do is delete it after several tries.

Easy David,

Many sites don't appear on search engines - often on purpose. This is
especially the case with those containing information about Motorola
products and protocols. The fear of Motorola's team of bloodsucking
lawyers coming after a basement hobbyist is too much for some players.

MC

Hello!!

I posted a message earlier this day about a program that I have developed. The adress that I wrote was wrong so I will put the one that works in this message.

Go to: http://home.swipnet.se/27mhz/ham.zip and download it. It's freeware with no adverts or so.

I promise, you won't regret it. Many very useful things for both scanner and HAM.
Best regards, Jonas

4051. Re: Panasonic GigaRange Elite Cordless Phone Secure?

How can a scanner pick up a spread spectrum signal without the digital code used to generate the spread spectrum? I think the scanner would have a hard time covering that BW as well even a wide FM band.

I downloaded using the radius search with zip code option and picked at 15or 20 miles. I have an R10, so the .icf file it created was of a 1000 freqs. You probably know that you must have a cloning cable to hook from the ext. speaker to your computer and cloning software. There is a windows based system and a dos one to load this file and clone it (or write) it to your R10. The windows version you will have to purchase. I have seen the dos one somewhere on the net for free. I hope this helps.

You are wrong about me not regreting it. The damned software downloads and unzips just fine. I installed it and when executing HAMUtil.exe it dials the internet, logs on and does nothing further apparently. When I bailed out of that a picture that looks like a calculator comes up on my screen. This picture has a window in it that lists all of my passwords that are installed on my system. What do my passwords have to do with a ham utility and why do you dial up the internet and what information has that dial up down loaded and or uploaded from my computer?

Please, Jonas can you explain what the hell is going on here?

Purchased brand new from Radio Shack. Shortwve coverage desktop portable with built in cassette recorder.
I have never even played a cassette in it. I bought it so i would have a nice desktop radio and ended up also getting a shelf system stereo so the dx-392 just sits here. I have the owners manual and will include an AC adapter.
I may or may not have the box. If I ever get up into the attic to get down the Christmas stuff, I will know for sure.
$100.00 shipped in USA or will consider some sort of trade for handheld or desktop scanner.
Thanks
Bob

WHAT?!?!?!
I have tested the software several times and all of my friends too and I never noticed something like that you explain. It must be some kind of virus on your computer or the server that I have uploaded the zipfile to.
I haven't coded something to steal passwords. If I wanted to do that, the file would be much smaller that the one I uploaded. That file is suposed to be full of useful utilities that I have coded.
I'm sorry, but I don't know "what the hell is going on"...
All I can say is "Delete it" and I will have to look up what's happend.

Hi everyone,

I'd like to write some custom software to control my AOR3000. Unfortunately my manual disappeared after shifting houses some time ago.

Does anyone have an electronic copy of the serial interface spec so that I can get my PC and AOR3000 talking?

Many thanks,
Pete.

Same thing happened here, though my firewall stopped it from actually logging on. It appears to be, indeed, a password-stealing utility. Come to think of it, coming from a address that contains "swipnet" should have been a bit of a tip-off. Stay away from this one, folks!!!

Now, the "passjack" in the URL is the tip-off. What you get is a
program that wants to log on to the net and apparently upload all your
passwords. My firewall stopped it--you might not be so lucky. Stay
away from this one!!!!!!!

Hello.

Does anybody know of any modifications that can be done on the Pro-2050?

I have successfully (and without doing any damage) managed to gain access to those two pesky shields that are on the PCB . Now that I've gotten into the guts of it, is there anything to be done with them.

Happy holidays. I hope everyone gets a shiny new scanner!

Thanks.

> Before you buy.

Medlad...below are all of the police frequencies in Okaloosa (that are not
trunking systems). For your own search abilities...go to
www.perconcorp.com/scripts/foxweb.exe/PROCSUBM?\0\FCC\RS_County\SPECTRUM\SPECTRUM

On this page, it indicates that Okaloosa does have trunking frequencies
assigned but I can't tell you (from N. C.) if they are active, you'll have
to check for yourself...
http://www.perconcorp.com/scripts/foxweb.exe/SRCH_ENG?\0\FCC\RS_County\SPECTRUM\SPECTRUM

The "Radio Service Codes" in the search fields are "PP" for public service
and "YP" for trunked public service

For all of your frequency needs go to
http://www.perconcorp.com/datafinder/index.html

Happy hunting...Rob

Robert, after reading your message I d/l that file, but before I ran it I took the phone off hook and sure enough it came up with the what appears to be a picture of a phone and it had my passwords in it.

The name in the top window was passjacker@warez.com IIRC, but I have removed the program. To bad we can't channel our brains for something good, I mean the guy is still a turd, but it had to take some time and smarts to come up with this program. I wonder when we will see a world wide computer hostage program. Something like what this guy is sending but send in $10.00 or $100.00 ect and we'll give you a password to allow access to your system again.

I use ARC2 software for Icom R2 and that software removes the duplicates during import.

Terry Lee <terryllee@home.com> wrote in message news:3A33BA09.E512D4E1@home.com...
I have use it for both of my R10 and R2 radios. Worked just fine. The only problem is that you will get multiple listings for a station that has base and handhelds. This will fill the max. channels of the receiver you select in a radius search quickly.

On Tue, 05 Dec 2000 21:43:24 GMT, Bruce k <bpk68122@yahoo.com> tapped
out:

>I have HEARD the best time to listen to cell phones is late at night
>when the bars close. Couples get into arguments and guys call those sex
>976 lines. I think I would get more excitement from hearing coworkers at
>Walmart on the radio or taxicabs.

Heh -- I'm sure you're right.

I live in an apartment building -- and it's not unusual to be able to
hear someone's cordless phone conversation (in the 49MHz band). Big
deal -- you might hear a couple of guys talking about football, or
women gossiping about their co-workers and boyfriends. Stuff like
that. Who cares? I'd much rather listen to ambulance calls, railroad
crews (of which there are many here in Flagstaff, AZ -- we get over
100 freight trains a day), police, and commercial radio traffic.

If cell-capable scanners weren't illegal, it wouldn't be such a big
deal. But when you ban something, all of a sudden everyone wants to
do it....

I downloaded it OK, but I had the same problem you do. It won't unzip. It
kept popping up with some strange error that I've never seen before. I'm
using Winzip, which will also allow you to run an executable program that's
still zipped up. It wouldn't do this, either. I finally deleted it.

Now that we have seen both extremes in this one message, maybe more rational people can find a spot in the middle.

When you get one from the left, and one from the right, playing "Ain't it awful" at the same time in goes from the sublime to the ridiculous

If anything threatens Amateur Radio, it is people who instead of operating what ever mode it is they champion, get on the internet and lament the future of amateur radio.

Well, I think the jury's still out on that one Noel.......

After an initial surge of new licensees in the USA (I see you're from England) under the No-Code Tech provisions, new licensing (whether with or without Code @ 5wpm) has dropped off to approximately the same levels (or less) that we saw before the advent of a No-Code license here. IMHO, even if we did away with the Code provisions of H.F. licensing (an event that may be coming down the pike in another 5 or so years), we'd see about the same thing........ an initial rush of new applicants for 6 months to a year, and then the same slow decline in overall amateur numbers.

As Fred posted.... the decline in amateur numbers has little to do with licensing requirements and far more to do with other hobbies/distractions available today (computers, internet..etc).

Besides..... the old brigade (your words) are gonna be around for a long time yet... Most of the so-called newcomers to ham radio I've seen are in their 30's and 40's and many seem interested in earning H.F. privileges, 5wpm or not...... the teens of today just have too many other entertainment outlets clamoring for their attention to consider ham radio.... Nintendo, TV, MTV, the internet, pagers, cell phones..etc.... 5wpm Code has almost nothing to do with the lack of teens coming into Ham radio.

From: Firefox <Firefox@Southwind.net> asked:
> Anybody have a wiring diagram for the RS-232 cable for a BC-895 for
> computer control of this radio ?

The interface is a 5-pin PCB header (.025" square pins on 0.1" centers).
The mating socket is standard (RadioShack.com's Cat# 910-1471 is 25 cents,
plus 24 cents for 3 contacts), but a segment cut out of a DIP socket will
work just as well. The pinout is symmetric, with pins 1&5 (the outer ones)
carrying data in (to the radio), 2&4 are data out (from the radio), and
pin 3 is ground.

The cable connections are:

BC895 DB9 DB25
1 <= to radio 3 2
2 from radio => 2 3
3 <= ground => 5 7
(TR-CD-DSR) 4-1-6 20-8-6 *
(RTS-CTS) 7-8 4-5 *

* If you will be using a standard communication program, add the two sets
of jumpers in the RS-232 connector to simulate the normal control signals.

The comm protcol is half-duplex, 9600 baud, 8/N/1. Commands to the radio
should be terminated with a C/R only.

>ScanStar.

Silver 506 -
I too have an R-8500 and use the RS-8500 software package to control it -
sometimes.....
I think this may well be the genuine Icom one too....
It's not that good,,, and I have both my PC and R-8500 sitting right next
to each other and I am not going to use the software to control it when I
can simply move my fingers a few more inches to the real thing... Seems
stupid doesn't it? I think this was written for Win 3.xx as it is not
that great under Win9x etc but it does the job....
BUT it is good to store your memories entire contents and chop and change
and keep several entire frequencies memories under different names. That
way you can load them up at will and do all the labelling/naming from the
PC instead of using the R-8500 clumbsy system then simply transfer them to
the receiver at your leisure....

Try this link... Simply double click on it from here or if that doesn't
work, cut 'n' paste it to your browser and it should automatically download
for you....
http://www.gebhart-sbg.at/download/rs8500.exe

Good luck... let us know if it is what your are after...

It was very easy to make, the connection on the back of the BC 895 xlt
I discovered is EXACTLY the same as many USB (Universal Serial Bus)
connections TO THE MOTHERBOARD of a PC. Some are combined into 2
rows, some are one row. You want the one row kind.

Have fun!

Might as well give up right now on have just one scanner. You never will. :) Every one will lack something. Even just one tiny little feature.

I have RS:

Pro-2006 (bought in 1993 or so...)
Pro-2067 (just bought)

Other:
BC895xlt (great! I am also writing software for it right now)
BC3000xlt
BC3000xlt (another one, my Dad's, who recently passed)

plus various Ham gear...

Have fun Jeff

A mint condition, full coverage, AR-8200 with box and documentation. This unit has always been kept in the vinyl
case and has no scratches or blemishes. The only original item that is missing is the (so-called) antenna it came with,
apparently I misplaced it when I took it off the radio. Also included are the following items: the optional CTCSS card, a hard to find SSE/Jim charging stand, a US type wall charger, and a vinyl carry case,. Price is $550 plus shipping, buyer to pay by postal money order. Not interested in trades. Feel free to check eBay for my references.

Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.swap

Everyone,

The SE US Trunked Radio Information Homepage is please to announce the addition of Radio Trunking and Trunktracker related user forums to the page. These user forums were created for the sole purpose of facilitating the exchange of Trunked Radio Information for hobbyists and professionals alike, as well as allowing folks to intercommunicate about specific systems in a regional area of the Southeast.

There are user forums for each state covered by the SE US Trunked Radio Information homepage, as well as additional forums for specific trunking system types, trunker/etrunker discussion, and ASTRO/Digital trunking systems. Some other specific uses for the forum -->

- Do you have a question about information regarding a specific system in your area? Post the question, and someone out there will most likely have a answer!
- Do you have a collection of trunking frequencies and talkgroup id's for a specific system? Post it on the forum, and share the information with your fellow hobbyists!
- Can't program that new trunktracker scanner? Post a question to the forums!
- Trouble getting trunker/etrunk working... post a question!

Please do stop by, check out the forums, and post a message to one of the regional forums introducing yourself! To post to the message forums, you must register with the discussion board. This insures that Spam is kept to a minimum, and that the quality of the postings provide the detailed information that these pages are all about. Click on the link called "Register" on the discussion forums page to start. No registration is required to browse the forums.

You can access the discussion forum at http://www.trunkedradio.net

Warmest regards, and Happy Holidays!

Lindsay Blanton
Webmaster - http://www.trunkedradio.net

Since I have come into the scanner hobby a/c (after crystals) I am in need of some information. I need an older scanner, probably 8 to 10 channels that will be setup with the civilian air band frequencies only. This is for a display for aircraft related hobbies and occupations. If anbody has any suggestions for an older scanner that will fit this please reply either to my E-mail or this newsgroup. I have had a couple of people suggest the older Bearcat radios but no one seems to know which one. Thanks in advance for any information.

First: don't forget you'll have to buy a crystal ($5.00 ea.) for each channel. Second: the older crystal scanners weren't very common, hence hard to come by. That said, if you really want a crystal scanner, look for the Regency scanners on ebay, I saw one (air band) there the other day. Of course, you are buying as-is. I had to buy two to get one that worked. I like the old Regency 8 ch. TMR-series scanners, they were the first ones I owned back in the early 70's. It's fun to watch the channel indicator lights, like a wave from left to right.

>latest version.

Spread Spectrum for items such as cordless phones are covered by the
FCC's regulations in Part 15, for users in the USA. The FCC doesn't
care whether the signal is encrypted or even difficult to receive for
any reason. They only care about power density per channel.

There are real Direct Sequence Spread Spectrum phones out there. Some
even use digital codecs to send the modulation through the DSSS
connection. Those phones are not cheap, but they work very well and
they're worth every penny. I have one from Sanyo and I use it to the
fullest on my small farm. Yes, it works very well, even outside the
house in the middle of my field.

Naturally, we're dealing with a consumer product here and, let's be
honest, most consumers don't know what they're buying. A company such
as Panasonic can put crap like this silly "Gigarange" phone on the
market and it will sell like crazy.

Caveat Emptor.

Hi,

Battery packs for both the BC-100 and 200XLT are starting to become scarce.

I knw that http://www.batteriesamerica.com/ sells new ones at very good prices. They advertise in most of the ham radio magazines, by the way.

Can you make a list of what frequencies they are for? I'd like to see if
there's anything I can use.

You'd have to ask panasonic as I didn't design the phone! My guess would be that they aren't really implementing spread spectrum but using a wider bandwidth and calling it spread spectrum! On my cheapo scanners [pro 2006, pro 43 and pro 90] I hear the calls slightly distorted. On my Icom r7000 I hear it clear as a bell.

If these sites are "hidden", then who are we to blow their cover
in a public newsgroup on the basis of a question from some random
person? Indeed, who is to say the guy isn't himself a proxy for
Evil Motorola looking for "basement hobbyists" to crush? Or are
these terrifying Motorola IP attorney's completely unaware of USENET?

Hence, the correct answer to a question like this in this forum
is either (a) silence, or (b) "use a search engine, twit!".

P.S. Please include the text you are responding to *BEFORE* your
comments.

Dear FBI Agent jfaul@bellsouth.net,

We are presently busy processing the requests for porn sites
that feature six year old children, bomb making instruction
sites, phone phreaking, computer hacking, clandestine chemistry
and other illicit information that is available on the Internet.

You are #832 in the list. Please be patient; your request
is very important to us. An operator will be pleased to
service it as soon as one becomes available.

Thank you.

snip
As much as it pains me to "defend" Radio Shack (or as a friend says RatShack(SM) "you've got questions and we don't have a clue), I have a Pro2004 that I have had for at least 10 years. Got it the first week they where on sale. Been on almost the entire time. Never, every gave a hint of trouble. The closet to "failing" was after an bad nearby lightning strike that de-programed everything in the house. It has been left out in sub-zeor weather(the display gets a little hard to read, but heck, I am shivering so bad it does not matter), left in (and on) in a sealed auto in the sun. So hot that you could not hold the case. Keeps right on ticking.
I only run it from a regulated +12 (13.65V) power supply. I cliped the lead to the bright on the dimmer switch. I have added a 0.455/10.7MHz IF out, and the detector "demod out" for WFM and NFW.
It is perhaps the best scanner ever produced.
I even have a 20(?) year old Pro16 that still runs fine.
And I have carried a Pro34 for years, it has been dropped, the case looks like it went to war. And lost, but the little beast runs great.
I have tried several Unidens but, for MY NEEDS, the Pro2004 is still champ.
.

>Robert KD7CJ
While I LOVE my PCR1000, the PCR100 might be a better choice for just scanning. Better software (Icoms software sucks, but the '100 is better than the '1000), cheaper but it does not receive SSB. Which is rather rare (except for HAMs I have never ever heard SSB above 30MHz). IT also supports FM stereo for those times when you want quite music.
There are several aftermarket control programs for both the '100 and '1000.

Look up the term virtual downconversion...

A GRE superconverter converts ALL 800 MHz signals down to 400 MHz.
If your scanner can monitor the 400 MHz band, you "could" listen to
cellular.
These are no longer legal for sale in the USA but a savvy websurfer can find
them.

Every radio can be modified. ;-)

Robert

Another good source for a cheap easy "no-solder" cable is to use the
cable from a dead mouse and a CD-ROM audio cable.

Pins 1 and 5 are the same on the 895, as is 2 and 4. There is a gap on
the CD-ROM cable, so what you need to do is use pins 1, 3, and 4. Or
2, 3, and 5.

Isn't spread spectrum where the frequency is put slightly out of range of cheap scanners tuning range, for example
A 12.5khz steps scanner can not easily recieve a frequency in between say 902.987MHz - 903MHz

4130. Re: Extremely useful scanner info to absolutely everyone in USA

Newsgroup: rec.radio.scanner

The tuning steps aren't very good on Radio Shack scanners. You can't fine tune them like you can on a more expensive scanner. It seems that RS scanners are only good as portable trunk trackers.

4131. using Advisor Elite pager RX board as a "scanner"

Newsgroup: rec.radio.scanner
Date: 2000-12-12 04:29:56 UTC
From: RDS <regulator@yifan.net>
Message-ID: <913uf3$mr1$1@msunews.cl.msu.edu>
Source record: 74475

The advisor elite pager uses a special receiver board which is cabable of receiving on a number of frequencies. As far as I can tell, the board accepts a low frequency input, and according to this input frequency, will determine what frequency the board is to recieve on.

This is about the extent of my knowledge of the board, other than it decodes the information on the frequency right into 2-bit binary data for the decoder board to use.
I would like to do some experimentation on the board, but with as little knowledge as I have about the board, I am having trouble getting started. Can anyone send me any information they may have on this board, schematics, info, whatever...?
I would like to interface the board with a PIC (STAMP) Controller chip for further experimentation and controlling.

Thanks!!!!
RDS

The R-3 is a real disappointment to put it mildly. It's piss-poor front end renders it almost useless in the city. As far as video..if the source is regular TV (VSB) it will work...but if they are wide band FM like they use in news helicopters or on 6/12 gigs the radio is worthless....check it out before you buy...the radio (for the money) is a flop.

Panasonic really laid an egg with this one. It seems that Panasonic THINKS that a transmitter that sequences thru a set of channels is "Spread Spectrum". Panasonic is using the term as a buzzword...kinda like "Turbo". We all know about turbo mixers,computers and toilets. The cold hard fact is this.... The "Gigarange" cordless sets DO use a sequencing 2.4Gig TALKBACK only. The handset is conventional 900Mhz narrowband FM!!!! to add insult to injury the ALWAYS start on the same channel if they don't hear any carrier on the first channel. This is why you hear them a lot of the time in the same place.
The "Gigarange" is a piece of shit, put simply. There are MANY of the real DSS(digital spread spectrum) units out there by many manufactures.....pass on the Panasonics....its a shame really as Panasonic (mashushita) usually has a fine product line.

Hi there,

I plunked in "formet" as a search term into the TAFL search engine
(http://neon.polkaroo.net/~darkwing/tafl) for the Western and Central
Ontario file, and got a hit for this company. Try it, you'll like it. =)

You don't fine tune a scanner, you fine tune a receiver. You should point out this perceived fault of yours to Alinco, Yaesu, Kenwood, Icom, Standard and a few others I am sure I missed. They also have similar tuning steps as those "Radio Shack" scanners.

> tf
> please email me directly

Couldn'd be simpler.. build your own with 2 cordless telephone 3.6V
nicad packs in series.
I've used the 600 mAH Panasonic P-P501 packs for years..They far
oultlast any Uniden or second-party battery pack I've tried.
Just pop your battery pack apart and two of these packs in series will
fit perfectly.
Lots of places carry them. I get them from Digikey (www.digikey.com) for
~$9.00
A Visa order shows up often in 2 days.
Basically any 3.6V 600maH nicad pack of the proper dimensions will work
fine.. The Panasonic packs are 1.88x1.65x0.55"

By the way emailing you directly is of no benefit to the other
subscribers of the group and such a request can often be construed to be
in poor taste on a public newsgroup ;)

I use both RealServer and RealProducer under Linux (there are also
Windows versions)..www.real.com
I've found that an even better solution is icecast under Linux (or again
Shoutcast under Windows)
I listen to my home FireDept scanner all day at work via RealServer or
icecast.

4149. FS: Sony ICF-M350V TV/Weather/FM/AM Radio $45 Shipped

Newsgroup: rec.radio.scanner
Date: 2000-12-12 17:36:56 UTC
From: David Schoenberger <dtscho@wm.edu>
Message-ID: <915nnnnpk1@nnrp1.deja.com>
Source record: 74398

I have a Sony ICF-M350V TV/Weather/FM/AM radio for $45 shipped in the continental US via insured US Postal Service Priority Mail. The receiver has PLL synthesized digital tuning, a built-in clock with alarm, and five memory presets in each of the bands. The radio has a key lock, headphone jack, a whip antenna, and a stand on the back. It can be powered with an AC adapter (not included) or with three AA batteries (not included). It is in excellent condition except for some minor scratches on the display (which are barely noticeable).

Fortunately, it is old news that was reported in the past on these newsgroups. There is a very good chance both bills will officially die when the 106th Congress ends because they passed a different bill that only included the tax wording.

Watch the dates on the bills.

An excellent site to check regarding links and information to scanner and communication laws, politics, weather, news, Bill Cheek crackdown, amateur radio, space, broadcasting, etc.

I'm sorry, I should have said that I was looking for any type of
modification in general, not necessarily cell phone activation. Although
that would have been nice, as I live in Canada and it is perfectly legal for
me to listen to cell phone frequencies and have a radio modified to do so.

I have been in the hobby for many years and am pretty handy with a
soldering iron. That's why I asked.

Thanks for the input on the converter. I'll probably be able to find one
with very little trouble. Never thought of that one, actually.

You know, I had a funny feeling about this one so I did scan the zip file with Norton 2001 AV with the latest updates--and it didn't find anything wrong. It might have been wiser--hindsight--to scan the whole computer after the thing was unzipped and installed before I double-clicked on the .exe file. Next time....

But, I uninstalled that puppy right away, ran a full virus scan, then took a peek in the registry to see if anything suspicious was left. It looks like the Windows uninstall got rid of it Ok....

4168. pro-92 programing question

Newsgroup: rec.radio.scanner
Date: 2000-12-13 19:06:03 UTC
From: Donald Harkins <donhark@my-deja.com>
Message-ID: <918haj$2cr$1@nnrp1.deja.com>
Source record: 74417

I saw that the pro-92 can recieve SAME codes that the weather service puts out on the weatherradio. I am wondering how you program them in?

5 minutes with any UseNet search engine will turn this up.

From: Jason Reilly <jreilly@tassie.net.au>
Newsgroups: rec.radio.scanner,aus.radio.scanner,alt.radio.scanner.uk,alt.radio.scanner
Subject: Definitive answer:MVT7100 discrim output
Date: Mon, 06 Apr 1998 06:39:28 +1000
Organization: Tasmania's Access Server Pty Ltd

Hi all,
After much of the weekend looking for the real discriminator output on
the Yupiteru MVT7100 receiver, I have the following to offer.
The discriminator output (for Narrow FM) appears on pin 9 of the TA
31136 sufrace mount chip on the IF board. However the output level of
this is pretty high, and I have found that my Hamcomm slicer interface
works well (and this is probably recommended) if you tap the
discriminator not at this point, but on the other side of the 56k
surface mount resistor which takes the unde-emphasised audio to pin 8 of
the 4066 surface mount IC.
If your slicer interface does not like the lower level, I guess you
could take the high level output, but make sure you use some form of
protection against shorting, such as a 5K ohm bleed resistor.
Now, some interesting things: This point that I mentioned here works
perfectly for PD (pager Decoder etc) but I really wanted it to look at
an EDACS control channel, 9600 bps, which it did not do initially.
Switching the radio to AM mode worked! I have one theory on this: the
output that I describe is constantly on, but selecting different modes
alters the bandwidth, with AM selected over FM seeming to give a
slightly wider bandwidth, which helps in decoding fast datastreams. The
damned thing even worked when selecting SSB (work that out!) but no
output is detected for wide-FM.
So, there you have it. If your discriminator tap doesn't work using
this info, try bleeding off a higher level output, and try selecting AM
mode.
Thanks - Jason

I checked my frequency listings before I got them and many were local
frequencies - even a few 2m freq's... I do believe I have a couple that cover
the air bands as well.

Andy,
You were fortunate, the guy selling the lot of crystals that I bought said there were too many to list, take it or leave it, so I took the chance. One of these days I'll get them all inventoried and I'll post a list in case anybody else needs one of them. As it is, the two crystals I could use cost me about $11.00 apiece. Oh, well.
Mark

I highly recommend Zone Alarm. After installing it I was
amazed at all the activity going on behind the scenes when
I'm online. Like why is RealPlayer constantly sending out
data from my computer and the constant barrage of incoming
cookie requests from commercial sites. Even if you think
you don't need it, its a very educational experience at a
minimum.

While the CSP is migrating to 800 MHz digital to join such places as Jefferson and Douglas counties, along the I-70 corridor both Summit and Clear Creek counties remain on VHF. CSP officers can still be heard coordinating response with the local agencies on VHF. If you ski further west, Eagle County's 800 MHz system is analog and can be trunk-tracked.

I'm happy that CDOT finally finished the highway reconstruction below the Twin Tunnels. That work zone virtually guaranteed a Sunday evening backup *every* weekend last year. This year has already seen much better commutes. CDOT remains on VHF also.

Of course, the scanner has been much more quiet during the trip because of the lack of logjam....

Not familiar with that model but with a list of frequencies and power, you can listen in on the Fire Services, Taxi Cabs, Paramedics, Hospitals, Airports, and more...

Do a little research on that model and what frequencies you want to hear in your area; most scanners with a standart antenna will pick-up radio communications from as far as 100 miles under some conditions.

See: http://expage.com/pbscanner1
and LINKS for other frequencies that may help.

Maybe, maybe not. From http://www.amsat.org/amsat/news/ans.html

"Early Wednesday, December 13th, telemetry transmissions from AO-40
stopped while work on the 400 N propulsion system was in progress. An
investigation by the AO-40 development team has begun. They are now
waiting for certain on-board software events to occur on Saturday
afternoon, December 16th. These are programmed to start a spacecraft
emergency routine called 'command-assist' which attempts to re-establish
communications. This offers the best chance of recovering evidence of
the incident which made the telemetry transmissions stop."

A little premature. According to the bulletin from AMSAT there's an emergency routine that will kick of on Saturday afternoon that may help to re-establish communications. I'll be holding my breath until then.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1201247917

Only 3 days left for this radio. The only changes are. 1. To optain warranty service if needed you will have to ship the radio back to me then I will ship it to the dealer for service. 2. The original radio I received was not field programmable and needs to have a jumper removed. I did order another GP68 VHF without the jumper to enable the field programmable function and waiting for the dealers computers to be fixed since they crashed. So should have that radio by next Wednesday. If you are ok with the GP68 I have that has the jumper and you can remove it let me know. I am leaving it to the winner before I ship this radio back incase the winner wants it. All further GP68's listed by me will not have the jumper enabling field programability.

Please email me directly with any questions.

Thx,

Joe

4230. Santa Claus frequency???

Newsgroup: rec.radio.scanner

what icom handheld compares with a jupiteru 9000 or 7100 the best on the
market,the icom r2 is fantastic but a different price bracket different
functions,the only comparissons might be with an aor 8200 or yaesu vr500,the
icom r10 is ok but a bit basic function wise
but yupiteru is the preffered favourite for top handhelds followed by aor.

regards paul

4233. Introduction to speech inversion descrambling!

Newsgroup: rec.radio.scanner
Date: 2000-12-14 22:51:20 UTC
From: ctpds49@aol.com
Message-ID: <20001214175120.06091.00000563@ng-ff1.aol.com>
Source record: 74381

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

??????????

Why would a heavenly body moving through the Earth's shadow
have to do with signals bouncing off the upper atmosphere?

The moon is much farther away. Light takes about 3 seconds
to make it here from the moon at 186,000 miles per second.

Firstly, the earth is moving through the shadow of the moon, not
the other way around. Secondly, sunlight DOES have a lot to
do with radio propagation by ionizing earth's atmosphere to
lower altitudes than it would be otherwise. This is why HF travels
farther at night, the reflective layer of ionization is much higher then.
As for the eclipse, since it is only partial, my guess is that radio
propagation will not be greatly affected, but who knows?
Perhaps the moon shadow will act like a local twilight?

So I got the shadow backwards, my niece and nephew were here
making a LOT of noise. As far as nighttime propagation, the
D layer is the one that absorbs RF. It fades rapidly after dark.

So do you think it would fade during an eclipse? An interesting
experiment would be to monitor a distant station during the event.

I'm not sure what they use for Sleigh-to-Pole contact (Iridium?), but I caught one of those damn elves at the mall with this programmed in his portable

1) 151.625 SLEIGH-1
2) 151.955 SLEIGH-2
3) 154.600 LZS-1
4) 154.570 LZS-2
5) 119.900 POLE TWR
6) 165.9125 US-IRS

He said 1&2 were on-board ops freqs, 3&4 were landing zone security channels (presents are getting expensive), 5 is self-explanatory, and 6 is used when delivering some of those more expensive gifts to shady types...Tones noted were 151.4 on 1-4, and 123.0 on 6...He also said some encryption is used, then kicked me in the shins and ran off...

Message-ID: <91c7jq$41o$1@nnrp1.deja.com>
Source record: 74199
Cross-posted to: rec.radio.scanner,alt.radio.scanner

The purpose of PA-Sit-Rep is to keep
all of our e-mail list subscribers
up to date on emergency situations
and activities of MAJOR import
throughout the state of Pennsylvania.

PA-Sit-Rep is a free communications
tool that will enable subscribers
to monitor situations throughout the
State of Pennsylvania including major
weather emergencies, natural disasters,
environmental disasters, police and
military activities (major emergency
events and exercises only), civil
disturbances and political developments
ONLY OF THE MOST MAJOR IMPORT).

List members are encouraged (but not
required) to send reports to the
list pertaining to any of the above
activities.

The PA-Sit-Rep list is extremely low
volume because posts are limited to
messages pertaining to Pennsylvania
emergency situations only of the most
major import.

List membership consists entirely of
voluntary participants. The more
subscribers we have, the more effective
the list becomes. Please join today
and spread the word!

For more information or to subscribe,
please visit the PA-Sit-Rep web page:
http://www.1stpa-militia.org/sit-rep.htm

Or you may subscribe by sending an e-mail
to: pa_sit_rep@yahoo.com

Put the word "Subscribe" in the subject
line and the e-mail address you would
like to have subscribed in the message
body.

Paul,
Are you sure about this? I've previously checked several RF remotes that I use, and they were all in the 76-81 or 300 MHz range. This includes a Sears garage door opener, an X-10 remote controller, a Radio Shack car alarm arm/disarm remote, and a Sears ceiling fan controller. 433.920 MHz is part of the 420-450 MHz ham band, according to my ARRL repeater directory. I don't recall if this is a shared usage segment, but the band plan for the U.S. shows the frequencies from 433.000 to 435.000 MHz as "Auxiliary/repeater links". In fact, there is a network of VHF ham repeaters in this area that are linked together for use during times of severe weather, and the links are in this frequency range, as I recall.

As another follower, but not willing to experiment ;-)

In my experience there are no 'ordinary' serial cables, their
configuration depends on the purpose of the cable. At any rate: the
serial printer cable from my computer store didn't work. So here is
what I wired it into, and this one works for me.

I use a DB25Male to DB9Female cable (IC-R8500 to PC COM-port #1, YMMV)

DB25M DB9F
2 connected to 3
3 connected to 2
4/5 7/8
7 connected to 5
housing conn. to housing

The 4/5 and 7/8 means: interconnect these inside the plug.

I did stay up late last night playing with it ;-) I am not sure how
useful the software is, except for backup of all memory settings.
Probably it will be a lot easier to key in new memories on the PC and
upload them into the IC-R8500, but I haven't tried yet.

But I *did* make a backup, just to be on the safe side...

Good luck with your cable.
Bart.

There may be a 'NOSPAM.' in front of my E-mail address.
It is there to fool machines, not people.
Please remove it when you reply.

This is a European thing - the 433MHz LPD (10mW) band bounded by 433.05 and 434.79 MHz (or 433.92MHz +/- 0.87). This band can be used in most Euro countries for remote control and telemetry, and in some also for voice (not UK).

FM handhelds tend to have 69 channels at 433.075 - 434.775 MHz, 25kHz spacing/bandwidth, with CTCSS. This falls within the amateur 70cms band (in all regions), in the UK's repeater outputs and simplex FM segment. See http://www.ero.dk/doc98/official/word/rec7003E.doc

I've had to chastise my garage door opener repeatedly for talking with other garage door openers in the neighborhood... :-)

Greetings!

No, solar radiation in excess causes skip. You might see some
interesting if not awe inspiring glimpes at the suns corona or be able
to see ejecta and prominences off of the suns limb - but skip event
[if you're talking 11 meters] is due to solar radiation from the sun.

Maybe you're confusing this with EME - Earth Moon Earth bounce?

[Reflecting signals off the moon and back to earth.]

Sorry. Santa figured out a way lobby our politicians and tap our tax dollars. He now utilizes a digital Mototola ASTRO system. Therefore, no monitoring is possible.

4268. Oakland, CA GE Number of Trunks?

Newsgroup: rec.radio.scanner
Date: 2000-12-15 18:41:43 UTC
From: Richard King <rking@dnai.com>
Message-ID: <01c066c6$49f00b80$71a6accf@rking>
Source record: 74218

Can any Northern California residents help me out?

I have three separate lists of trunk frequencies for the GE system used by the City of Oakland. Of the three, the list with the fewest number of trunks "seems" to work best in the BC245XLT, But I still think I may be missing a transmission or two.

The list that works the best is the one I took from the Bearcat guide that came with the unit, but I have two additional regional guides that have additional channels, each varying by a trunk or two.

When I put all the trunks in, the radio is next to useless. Hence the question, does anyone have a current list and sequence order for the Oakland system?

Thank you for your help.

Don't look directly at the sun! Use welding goggles or a
pinhole camera. Even obscured by the moon, the stuff is
way too bright. It will cause permanent eye damage.

Hal, the LCD display assembly on most consumer items is very fragile. I fractured one on my Garmin GPS III, and cracked one on my Pro-2004. I don't think that this is Icom's problem. The user has to be careful. Sorry to hear of your experience, I will be very careful with my R3.

erm....lets get this straight? A CHEAP rig that COSTS A LOT OF $$$???
So how much does an expensive one cost then? Think you've got your
logic in a twist!

Anybody who buys an EXPENSIVE ICOM which scans at the breathtaking
speed of 6ch/sec has to be taking the mickey. Many Bearcats and
Realistics do 50-75 these days. Even a cheap Yupiteru does around 20!

Forget the ICOM R2 and R10 for this money. In this price range, the
big choice is between the Yup and the AOR8200. Tough
decision.............

I'm sure that Santa has to check in with the control tower of every airport he flies over. The GPS unit in his sleigh tunes his radio to the appropriate frequencies so he can communicate virtually hands-free, which is important when you have to drive those reindeer.

The home base on the North Pole is on a Motorola hybrid TRS. Frequencies are:

856.4375
856.7375
857.4375
857.7375
858.4375
858.7375
859.4375
859.7375
860.4375
860.7375

Talkgroups are:

Source record: 74229

HI all,

I just picked up a Uniden Bearcat BC590xlt at a garage sale. I brought it home and it works great. While programming it, I noticed that it asked for CTCSS codes. Now I only paid $5.00Cdn for it so I thought, nah, couldn't be . . ..

But I opened her up and there was the CTCSS tone board! Quite the score I think. I have just about everything figured out on this little scanner and I am very happy with it. It will fit in my car nicely (that is legal here).

I would like to hear from anybody who has any experience with this model of scanner: tricks, tweaks, problems, etc. Not really interested in MODs, I've no interest. Also, I wouldn't mind finding a manual if someone has one to scan and a ballpark price for what this item originally sold for.

E-layer propogation can happen at anytime. The E-layer of the ionosphere is not as reliant on the solar event induced ionization. F-layer ionization generally has solar events that effect the level of ionization. Since the sun is being eclisped by the moon there is little chance that F-layer propogation will be enhanced. E-layer is less predictable, so who knows.

For Sale,

Radio Shack Realistic DX394 shortwave receiver. This is a european model
and is the latest B version with all the latest factory updates on it.
You will need a 12 volt adapter to power it. I took it out and used it
to make sure it works fine, other than that it is like new. You will
think you walked into Radio Shack and and bought new over the shelf.
Email for a photo or more info. $275.00 and I will pay the shipping by
U.S.P.S. Priority insured mail.

Thanks,
Rick B.

There is discussion at Uniden about making a handheld version of this scanner. From what I'm hearing from sources close to Uniden that a "digital" option is being considered. Now, no one has said what the option is but it's hoped that this option is an APCO-25 demodulator.

I'm looking for a handheld wideband scanner to scan shortwave
(and 225-406). Been to Strongsignals site and checked out a few but
don't know all the radios that have that (HF)range. I need at least 400
channels. Bearing in mind I'd like to stay under about $400, does
anyone have any recommendations? What not to get?
The only one I've been interested in so far is the Icom R2 as it
is also freeware compatable (a plus for quick programming) but I don't
want a 'micro'. Really like the the R10 but it only scans 1 bank at a
time (a waste).

Thanks

Im in the market for a computer controlled based scanner, but not sure what to get.

I live in a highly trunked area, but i want this to be connected to my laptop for mobile computer based scanning.

Of those 3 units, which one has the most software support?

The best handheld wideband scanner for HF is the Yupiteru MVT-7100. In terms of sensitivity and selectivity, the MVT-7100 is light years ahead of the Icom R-10. The 7100's HF SSB reception is especially impressive, and its VHF/UHF performance is as good or better than the R-10's performance in those bands.

73,
David

4295. SV: Icom IC-R3

Message-ID: <kmK_5.4155$O%.670287@newsc.telia.net>
Source record: 74245

I bought a R3 2 months ago, and i am satisfyied with it.
Goto www.butel.nl
they have the manual i PDF if you like to watch that first.

My experience

Good things about the R3:
1 Preatty fast scanning (if you compare to other icom handhelds)
2 Good range of recieveing 0.5-2495mhz
3 the TV works good if you are going to use it when your standing still. I
use it while waiting for my girlfriend in the car etc.
Just be careful with the Color LCD display. I have dropped mine many times
(also on cement) it did not brake like the others describe. The only thing
is that i have scrached the display when cleaning it (small particles on the
display) But thoose does not show when watching TV, Just when the display is
off. I would recommend to buy some type of plastic that can be attached to
the display att all times to prevent these kind off things. (it&#65533;s preatty
anoying to see the scratches)
4 easy to use. You will learn it fast. (U will need the manual if your not
familiar to the R2)
5 good sound, ATTenuator function works good when you use it near computers
that normally disturbs.
6 works good with PC programs like Wintone, Wacars, etc.
7 belt clip. Works very good if you compare to the plastic crap that comes
with the R2 and R10. this one is big and stable.
8 buttons, very smooth (Maybe they should of put an extra button for the
start scanning procedur. Now you have to press the "nintendo" :-) button to
the right for 3 sec. to start scanning.

Bad things about the R3:
1 Watching TV really sucks out the energy out of the batteries. I used
normal AA batteries one (Normal quality)
and it took 20 minutes until the scanner died. If you use the rechargable
battery that comes with the scanner it works better.
But you cant load the battery while watching TV with the normal charger. (i
bought the car charger and that works fine charging and watching TV at the
same time.)
2 If you drop it the silver color wears off rapidly. (i have an R10 also and
because that one is all black plastic you dont see if the scanner has gotte
anny marks).
3 the antenna. Dont put it in your belt with the antenna that comes with the
scanner. you will break it instantly. (i have allready broken 2 of them.)
Then i bougth a BNC rubber high gain antenna and that works excellent (and
gives the scanner a better look and better recieving, but you will need the
antenna that comes with the scanner wile watching tv. If you dont live near

the TV brodcasting station.)

Good luck. With the modifications (antenna change, car charger, plastic on the Color LCD) i really recommend it.

Regards

Sebastian

>Sent via Deja.com

Most of the wide range scanners make poor HF receivers. They don't
have very good image rejection, and the HF channel size is much
narrower than the typical AM filter. A 12-15Khz AM filter is fine for
VHF/UHF, but when the nominal channel on HF is 5Khz......

Some of the better scanners like the MVT-9000 and AR-8200 do have a
narrow band AM filter available, but neither has especialy good image
rejection.

I have a Realistic Pro23...yes, a bit dated but it meets my needs. However, I'm on the fringe area of a P.D. that I wish to monitor. They're 800 MHz, and the only ones I listen to. Would changing the antenna from the original "rubber ducky" type help, for instance to an 800 MHz only antenna? They sell cell phone antennas that operate in the 800 range (with a similar connector)...would that work? Thanks in advance.

Try the RD800 from Optoelectronics. It uses a BNC connector like the stock rubber duck antenna and works great for 800mhZ trunked communications. It's only $35 plus shipping. It also works on local UHF and VHF communications, too.

Yes, I agree with the
>Most of the wide range scanners make poor HF receivers.
I use my R2 as a "dingy", it is a wide purpose rig that has many
attributes, but when you need to do serious listening, you have to
use a dedicated SW receiver, scanner, or aircraft band receiver for best results.
I use the R2 sometimes to find strong signals, and then tune them in on my
DX-398 or other rigs. In summary, the R2 is an excellent rig, I recommend it highly, but in order to get full
advantage
of what you are listening to, you will have to obtain other specific rigs that are designed for your specific purpose in mind. Other NG readers will surely be able to
tell you if the R2 is "scanner friendly".

I'm particularly interested, seeing that it was listed on the boatanchor ng.

Hi Seth:

Sounds like a good deal. How did you get past the guard dogs and under the fence to get at the secret archive?

Tried your link and got a snooty answer from fortune city about how they don't allow links to their site.

Site search yielded no useful info, just 10 Kilotons of.....well, you know.

After that, editing the URL to the same form as your link URL at least didn't get me the snooty message, but I did get error 404-File Not Found. Grrrrr! I hate sites like that. like a mixture of paranoia and ataxia nervosa with a touch of altzheimer's thrown in. Ugh! How can anyone stand to do business with them?

I really admire your persistence and resourcefulness, if you managed to get past all those cerebruses with an attitude and a hangover! (8=))

Ummmm....

Why flame the guy? In any case he didn't specify cellular mods.

Maybe he wants to know where his discriminator tap is or how to add a line output...a thing I'd like to know too.

That, BTW is not just a simple matter of picking off the top of the volume pot. The level at both wiper and top of pot vary with pot setting. the other terminal is ground. and, no the top two are not tied together. (;-(

Dan,
Please, anything of this type should be emailed to the other person directly. Trying to post a scanned page uses up a lot of bandwidth. It is good of you to help the other person, but most of the readers of this NG don't really want or need the information. This is a text-only newsgroup, if you want to post a scanned page, HTML, etc., you need to go to a binaries group.
Thanks for your cooperation,
Mark

Wellll...

In the moon's shadow, the degree of ionization should be different from surrounding areas that are illuminated. The gradient between the areas should do *something* unusual to radio signal refraction, but as a nearly total ignoramus on the subject, I am not in a position to say what that something might be.

Any rocket scientist out there care to alleviate my abysmal ignorance? ;-))

Thanks,

Roger, N2NHY

>Optocom. It has the best trunking and conventional software of these three.
>And it is a better all around scanner with the least complaints.

Well Glenn, I assume you HAVE an Optocom scanner and just haven't read about it .... but if you THINK that the software is the BEST... I'll have to differ with you... the ScanStar software must have been written by someone that thinks up FORMS for the federal government. I have YET to get the trunking software to WORK. By contrast the WinRadio software is far better and I can at least get the trunking software to work about half the time. Granted there is a BIG price difference in the two radios... but I do have
BOTH (optocom & winradio) and I'll vote
for the winradio. Can't comment on the ICOM .... don't own one.

4354. Stupid Newbie Question--Which Scanner Should I Get???

Newsgroup: rec.radio.scanner
Date: 2000-12-17 13:08:47 UTC
From: Paul Green <pgreen@concentric.net>
Message-ID: <91idsv$csl@dispatch.concentric.net>
Source record: 74250

I want to get a scanner, primarily to listen to air traffic control and airport frequencies (although I am happy to listen in to anything else that seems interesting). I want a portable one (that, for example, I can carry to the airport). Which ones should I be looking for? What are the best places to buy them? Obviously, Radio Shack is ubiquitous, but are there other places I should be looking? Being an impulse kind of guy, I would prefer to buy in person (although I could be persuaded to set aside my primal need for instant gratification if it means getting a better, cheaper one).

To those of you who actually have the patience to read and respond to this, thanks.

Paul

So be sure your scanner will cover the 108 to 137Mhz area with AM-mode.
SSB (USB/LSB) should be a nice addition though.

FOR SALE: OPTOELECTRONICS OPTOCOM // CELLULAR CAPABLE
Included Bitbanger 1.5, Computer Cable, AC Adapter, Telescoping Antenna

$500 Shipped Via Priority Mail in US only.

Must sell due to unexpected move. Please contact Via Email.

Optocom does Motorola/EDACS/EFJohnson with ScanStar software. Other
software works too. Full details here:
http://www.optoelectronics.com/optocom.htm

Picture of actual scanner for sale...

I live in the Washington, DC (USA) area (actually, the way-the-heck-out Maryland suburbs). I am looking at the Radio Shack Pro-92, which goes for $200, so I guess that is about my price range.

If you apply for a RS credit card they will knock off 10 % of the price.
(At least in California)
Just pay the bill quickly because the interest is 25% in California.

I have a working 760XLT w/ CTCSS tone board for sale.
It also has been modded for an external serial
Programit interface.
$150.00 I ship UPS to the lower 48 states.

Greg

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2042 and PRO-2006 base/mobiles, the Uniden/Bearcat BC895XLT, BC245XLT, SC200, and Radio Shack PRO-91 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your

scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for

- 2 -

free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published on the CARMA email list, carma@qth.net. You can obtain a free electronic subscription to the CARMA email list. For more info, see:

http://www.qth.net

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Most meetings are be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

You can query FCC databases directly from this web page: http://www.fcc.gov/searchtools.html

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Other frequency web sites include:
http://w5gb.nmsu.edu/kc5kto/,
http://www.fordyce.org/scanning/, and
http://www.scannerway.8m.com.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'.

(See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of

information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army

Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each

equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals

weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

Uniden sells refurbished scanners dn you can check current inventory at their web site:
http://www.uniden.com/docs/store

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120
Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the ICOM IC-R2, Uniden/Bearcat BC3000XLT, and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 2000 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229, email: electra@tcon.net,

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor

controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855.

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 2000 - ILLINOIS
last updated November 13, 2000

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, John Wass KA9QJX, Tom Harker, and ARRL for providing some of the information.

DECEMBER 2000

Dec 3 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Dec 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Dec 17 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

JANUARY 2001

Jan 28 (Sun): Cicero, IL - WCRA Mid-winter hamfest 2001. Hawthorn Park on S. Laramie Avenue, Cicero, Illinois Note change of venue 2 blocks south of 2000 hamfest! The new location, Hawthorn Race Park, is much nicer than the Odeum. Cleaner, brighter, better food. Tickets $5.00 in advance with 4 stubs. Parking is free. Advance tickets from Kurt F. Rubin, kb9rto@arrl.net and John E. Wiley, K9FID, johnwiley@lucent.com

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet. For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 2000 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,

archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://home.cfl.rr.com/scan/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the

squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006

reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back.
Multimode frequency coverage 0.1 to 2000 MHz (minus cellular
bands). 20 selectable step sizes from 0.05 to 500 kHz.
Knob atop the radio clicks when rotated and serves as a VFO
knob, channel selector, and menu navigation control.
Several battery pack options for NiCd and alkaline battery
cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack
and a sturdy 11 hour drop in charging stand. Loaded with
firmware features and complicated to use. Two VFOs and 1200

channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult

user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel

can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2

VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents

4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage

to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are

backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test

unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR

scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be

programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image

rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The

Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per

channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date.

Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search.

No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. For a service manual, call SONY at (800)488-7669, and press 3. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you

find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes

FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, | including Delphion's server:

Source record: 74271

I'm a newcomer to scanning, too -- just got my first rig a couple of months ago.

I'd suggest starting by reading some of the articles on Strong Signals (http:www.strongsignals.net). That helps sort out the issues that go into deciding what type of product will satisfy your requirements. Also, figure out what specific frequencies you're going to want to listen to -- that way, you can make sure the product you buy can receive those freqs. A specific issue that's important is whether or not the local police/fire use trunking systems -- in which case you need a trunk-tracking scanner.

I was looking to listen to things like police, fire, BNSF railroads, forest service, and so on. Bought a Uniden BC245XLT handheld (about $200 direct from uniden.com) and have been very happy with it. It has trunk-tracking capability, even though I don't need it here (a small city where no one uses trunking, AFAIK). I figured if I got a non-trunk-tracking scanner, the police would immediately switch to a trunking system.

Anyhow, the bottom line is, figure out what frequencies you want to listen to FIRST, then go shopping for a product.

Urb

Does anyone here actually have a WinRadio 1000i or above? What are your opinions with regards to the noise shielding? Is it effective? How does WinRadio compare with other more conventional wide band receivers you are familiar with?

Any suggestions? Warnings? accolades? regarding this product?

Hugh - You probably want a more informative answer than what you
were given. Below is a brief answer.

Here is what happened to the person you are asking about.
(the highlights)

First... He was kicked off of the Scan-L list by the moderator for abuse.

Then...He was kicked off of his (Cable-TV) ISP for abuse.

Then... He had another run in with the law and was arrested for
selling illegal electronic equipment by Federal Authorities.

Then... He was diagnosed with cancer.

Then... He (as a -self proclaimed- successful business owner & "Engineer")
was
asking people for donations because he was using a public defender & had
no health or legal insurance.

Then.... he died of cancer this last summer.

RIP

Message-ID: <t3qlbdp5r73g3c@corp.supernews.com>
Source record: 74282

I have a cell antenna I am not using anymore and would like to use it monitor railroad frequencies. I have some questions.

The antenna is a through glass type, how do they work? Is it better than the telescoping buyilt on my base unit?

Do through glass antenna work effectivelty when no ground plane is below it?

Can i set antenna length for 160 just by measurig distance from glass? - I am going to eliminate the whip with the "coils" in the center of it with a straight whip cut for the frequency i need.

Thanks

Pete

4386. Panasonic Cordless KX-TG2000B DIGITAL FHSS???

Bob,

I don't recall offhand what the Winradio covers, but I think it covers VLF thru UHF at least. I'd check Grove, first: www.grove-ent.com. Remember: for a wide bandwidth receiver, you'll eventually need more than one antenna to cover the whole range!

Keeping in mind that you're on a budget:

An attic kind of limits you. I'd try a Radio Shack Discone for the higher frequencies (25 MHz & up).

You can make your own antenna out of wire for the lower freqs. A simple doublet would work. Just string a piece of wire along the attic, with a break at the center. Connect the coax shield to one side of the break, and the center conductor to the other. Don't bother with a "balun". Without one, the outer shield of your coax becomes part of the antenna....a good thing, in moderation ;-))....or, try an active antenna from Grove and others.

Another wire antenna I'd try is a simple terminated horizontal loop: Just run some wire all around the edge of the attic. Connect the center of your coax to one end of the wire, and the shield through a 150-ohm carbon resistor (Radio Shack) to the other end. Purists will say the resistor should be halfway around the loop. This is easier.

If you have an attic, you must have a house. Try running the same kind of horizontal terminated loop around the back yard. you should have no trouble hiding it. since it doesn't have to be more than a few feet off the ground.

Depending on their size, each antenna will cover a different range
of
frequencies.

Here's a trick: if you locate several antennas so their feed points
are at the
same place and hook them together, the frequency ranges will
combine. There are
a number of quibbles and caveats to this, but they will pull in
signals.

Don't forget a good ground...very important!

For LF and VLF, most people buy or build some sort of tuned loop,
although a
long hunk of wire has its advocates. the loops usually require some
sort of
amplifier to get he best out of them. Grove is a good place to
start. I've seen
construction articles on www.antennex.com also.

Antennas are great fun to experiment with at little cost. have
yourself a
blast!

Best,

Roger, N2NHY

The Pro-92 is made by GRE and relabeled by Radio Shack. It is GRE's attempt to build a trunk-tracking scanner without violating the patents that Uniden holds on trunk-tracking scanner technology. A few posters have found that the GRE scanner doesn't do that as well as the Uniden-made scanners. For an alternative, the Uniden BC245XLT would be a good investment... see the other post in this thread that recommends it as an on-line purchase. I have a Uniden-made Radio Shack PRO-91 trunk-tracking scanner, and have been very happy with it.

BTW, I bought the PRO-91 initially just to listen to aircraft, like you. I soon found out that listening to Police, Fire, and Ambulance calls was a lot more interesting. If there are trunked systems in your area, buying a trunked scanner is well worth it.

I was given one of them, what a piece of Junk.
Panasonic is now farming out the warrantee repairs to some place in Massachusetts
it took 3 months to get mine repaired.
The phone is to small to hold and operate
The volume is to low, no redial, makes chugging sounds, and still has crap range.
"it just looks cool"
They have rechipped, modded, spot changed, renamed, and repackaged these $125-170 black and silver lemons so many times Ah..... I dont know any more.
STAY AWAY !.....RUN !

I went back to my Uniden from 1984 it works 1/2 with a speaker I can hear. (I just have to be careful)

Whoopsie! Too Late!

Feeling an impulse for instant gratification, I ran out and got the Pro-92A.
The Pro-94 was also a possiblity, but it did not seem worth the extra $100.

I am now trying to figure it out a bit. Among other things, it seems to be
missing some of the ranges used at BWI airport (approximately in the 200 -
350 mhz range). Why is that?

That's why I suggested identifying all the frequencies you're likely
to want to hear BEFORE buying a scanner!

Urb

Never argue with a 10-16 101.

Hi Pete.....You would be better off just leaving that cell phone antenna just like it is. Antenna length is not critical on recieving like it is on transmitting. A cell phone antenna length, like the one on your car is almost the correct length for a 1/4 wave whip for vhf. that is: 234 X freq. [160.500 approx] X 12 = 17.5"......I am a ham for 11 years and have done countless experiments with antennas. especially recieving antenna for my scanners and come to the conclusion that almost anything close to a 1/4 wave length will do. playing with or removing the loading coils wont help. just leave the cell antenna and use it as is. my friend Dan uses one and swears by it. you can judge for your self by putting a cell antenna and a regular scanner mobile antenna side by side and comparing. you will see no diference. however, using a 5/8 wave antenna, which is much longer with base coil will recieve a bit better. but for general monitoring in the car, a 1/4 wave length will be just fine. believe me! i used a PAPER CLIP slid into a mag mount base and used it for 800mhz recieving and it worked great!!!

Those are "military air band" frequencies, and weren't included in my
PRO-91's abilities either. Guess it's just one of those things you pay
extra for when you buy a higher-priced model.

Hello,

I posted a link to Ebay with an auction for a VHF GP68.. But Ebay cancelled the auction since Motorola does not want the radios in the US. Even though its one of the best ht's around! I guess Motorola doesnt want an HT selling in the US for about $300.00 that does more then a $700.00+ HT and they loose money on the programming software, cables etc about $300.00. So going to try and list them on Yahoo Auctions and will post them soon. Have 2 VHF & 1 UHF HT on order.. All radios are brand new in the box with a 2 year warranty.

Thx,

Joe

You're one sick jerk. Still obssessing over Cheek, even after the guy is six feet under. No one asked you to volunteer any more information, but as we have long known, that's not going to prevent you from spewing your loathesome bile. How long ago did Cheek boot your boot off the scanner radio list anyway? 8 years? 9 years ago?

People reading this post will want to know more about you too, so I'll tell them.

1) 10,000+ posts of invective, trolls, sniveling backstabbing and other sundry acts common to the lowliest miscreants on newsgroups
2) Allegations that you were caught selling radio licenses.
3) Allegations of deviant behavior with children in your care, including taking baths with them and sleeping in the nude with them.
4) Gross exxageration of employment, educational and professional accomplishments.
5) Utter incompetence in radio electronics, including blowing up repeaters

Unhappy holidays pervert!

9000XLT like new in the box. Box,antenna,paperwork,packing and a pristine scanner. Scanner has a couple hours use. You would not be able to tell this from new. I guarantee it. My Ebay name is penguinlover2 or mark7owner. Price is $240 plus $15 shipping Priority Mail insured. Scanner has a metal case so it is a little heavy. I accept Paypal or a postal money order. Lower 48 US states only please. You will not be disappointed!

Hi,

Thanks for reading this.. In each of the 10 banks.. Can I put more than 1 trunking system or does each trunking system have to be in it's own seperate bank?

Also, if I can put more than one.. does this also apply to the edacs systems? In other words, since you're not supposed to mix edacs with other stuff, can you put, say: 3 edacs systems in the same bank? Thanks.

Source record: 74176
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave

I posted this to another group just today... (rec.radio.amateur.misc) Just my opinion... I have a 1500i...

I've owned one for a little over a year now and really do like it...

The cards audio output simply loops back into the soundcard "line in" on the outside of the case. This could have been thought out a bit better, but I guess this was done for simplicity. There is no rs232 port, but you can plug your "Hamcom" type device directly into the audio output and connect to a com port as usual. Again I'm sure this was done to prevent the problems that would arise from trying to add another comm port and it's associated interrupts to every PC that gets used for this application.

There are of course some birdies, but these are present in every scanner I've owned. I'm sure there are some cleaner models on the market in this same price range, but the ease of use of this receiver and the associated whistles and bells make it worth the price in my book.

I especially like the ability to import an entire database directly from the FCC or Percon web sites into one of the freeware database managers and make up a new scan list from it. I live in a rural area, but the FCC still reports thousands of licenses for my county, and thousands more for adjacent areas. I would never take the time to enter them all manually into a scanner just to see what was available for listening to on each individual frequency. This makes it simple.

There are also some freebee scanner recorders available that make recording transmissions to a .wav file simple and straight forward. Ever wonder what happened while you were asleep last night? Just leave the PC on and record it as a .wav...

I also realize that the features I mentioned are possible on a lot of today's scanners through various interfaces, but there is something to be said for the all in one package concept...

I have a Pro2032 and a BC120xlt, I would like to trade both of these for a decent portable unit, my highest priorties being good reception and good battery life. I am not in a trunked or 800mhz area. Neither scanner has any mods, both are in excellent condition, work perfectly, and have the original packaging and manuals and I am the original owner.
Any offers or ideas on what these are worth would be welcome.

If you have the original (version 1.00) PRO-92 radio you can mix Motorola systems in one bank and you can mix LTR systems in one bank. You can also mix Motorola and LTR systems with conventional frequencies in the same bank regardless of what version of the radio you are using. In the newer Version 3.25 and Version 3.28 you can't mix two Motorola systems in one bank, but you can still mix trunked and conventional. You can mix EDACS and conventional frequencies as long as you preserve the LCN of the EDACS system.

You cannot program multiple EDACS systems in one bank. Think about it. If an EDACS system must start with x01 and the "Logical Channel Numbering" order must be maintained, then how could you possibly program more than one EDACS system into the same bank?

John Habbinga

It is particularly attrocious given that the radios are not illegal in
the US - they have a type certification from the FCC. Nothing more than
Motorola's marketing policy prevents their sale in the US and eBay
really has no grounds for cancelling the auction that I know of. I'd
complain (with the facts) if I was you.

Hummmmmmm are these the Motorola MDT's if so you will need the system
freqs the MDT id from console of public saftey group. This info is
not for public. This is done with MDC1200 and MDC600 in some cases.

Best wishes

4441. Re: Stupid Newbie Question--Which Scanner Should I Get???

Newsgroup: rec.radio.scanner
Date: 2000-12-19 10:42:29 UTC
From: Paul Green <pgreen@concentric.net>
Message-ID: <91ne2l$9oc@dispatch.concentric.net>
Source record: 74189

Thanks for your positive response. (Thanks to all, in fact, who contributed to this discussion). The specific reason I bought the unit was so that I could listen to ATC while my daughter's--who flew home from college last night--plan was brought into BWI. Peculiarly enough, it worked! I found the appropriate frequencies on some web site (hot dog, there are a lot of them!) and sure enough, there it was, five minutes early.

It has become clear to me that programming this thing by hand is a major pain. The software, however, to do it by computer is $70, which seems a bit high for a $200 scanner. Is there an alternative? Where do I get the interface (apparently, it plugs into a serial port)?

Paul

A Michigan lawmaker who Introduced a bill to require state permits in order to have a radio capable of tuning police frequencies in your car has withdrawn the measure, after meeting with a group of concerned Ham Radio Operators from the Livonia Amatuer Radio Club. The Detroit News reported on Nov 5 that State Rep. Mike Kowall withdrew the bill after being persuaded that its effect would be much broader than he had intended. Kowall said that he had written the bill simply to prevent criminals from using radios to escape police, but had no intention of punishing others. "I'm Just trying to protect the police and the public" He told the News, "But I don`t want to curtail anyone`s civil rights in the process"."

Members of the Livonia club promised to work with him on a revised version that focuses on using a radio in the commission of a crime or escaping capture, rather than mere posession of the radio

Yeah, sure. Kind of like the ongoing, incremental push for gun confiscation
via the government.

"I'm just trying to protect the innocent children...but I don't want to curtail
anyone' civil rights in the process."

Don't be fooled. The REAL intent of this bill was to prohibit taxpaying
citizens from being able to monitor the activities of law enforcement agencies.
Expect it to resurface again and again, probably hidden in non-related
legislation, until it finally passes.

Greetings all

I have a question regarding my understanding about the IC- R8500. I have this very fine scanner and would like to tap the raw fm for use with some decoding.

Now my problem is that I have a hard time figuring how t do this..I think now that I can understand from the ICR8500 manual there is a point on the rear panel I can do this...it is just not enabled by default (I need to take the cover of and do a jumper-setting change)...
In the manual im looking at page 16 explaning how to "jump" /ernable and use the [AGC] socket for AF output

Please could someone clarify me on this point and tell me if im on the right track.

Also I am looking for some information regarding tapping the discriminatoroutput from my comtell 205 (RS 2006 model almost)

Happy X-mas and a good Newyear to all of you

Greetings all

I have a question regarding my understanding about the BEST placement of my antennaes. Its currently situated in my attick...but im not overly enjoyed by the output to my scannercollection. I have the possiblity to mount a length of coax to my (stampsize) garden...

Situation is that I "feel" i get too much static and migth see improvements if i place it in the outside in a hight about 2 meters. Since my neighborhood "allows" some use of our private grounds i would like any and all input about any poss. gain from moving Discone (and later some more antennas to the outside).

Also ï¿½m interested in learning more about the use of a DSP unit to filter some static (not enhance sound otherwise - I think I DO understand that it would be a compromies)...any suggestions about a relatively cheap mainstream DSP unit ?

TIA

Stephan,
If you are picking up static, this could well occur if you site the aerial in your small garden too, if local interference is to blame.
I use an attic-mounted discone with great success. First make sure that the discone has been put together properly and get a decent piece of coax with some good connectors that are soldered on to connect it to your radio.
Trouble with an aerial like a discone outside is that it can be an advert to those who you would rather not know that you were a scanner enthusiast.
Sorry but no experience with DSPs other than expensive commercial ones.
Dave.

Source record: 74110

>Can anyone please tell me how to program it?

Turn it on.

Push the "manual" button to stop it from scanning.

Push numeral 1, then push "manual" again. This should leave you on channel one.

Using the keypad enter the frequency you want to monitor, then push "enter."

Push "manual" to step to channel number two. Enter the frequency. Push "enter." Push "manual" to step to channel three.

Repeat this process until all the channels are full, or you've run out of frequencies to enter.

Adjust the squelch control until the hiss goes away, then just a tiny bit more in the same direction.

Push "scan" to start automatically scanning the frequencies. The radio will stop when it hears someone talking, then resume scanning two seconds after the conversation has stopped.

If that is the real intent of the bill, why did Kowall withdraw it? I think
he should be given some credit for being one politician who can see the
error of his proposed legislation and rework it until it actually does what
he says he wants it to do. But if he actually thinks that this is going to
keep criminals from using scanners while committing a crime, he's deluding
himself. All this law, if passed, would do is tack on another crime to
someone who actually does use a scanner to commit a crime.

Is this bill really necessary, though? Is there a big problem in Michigan
with criminals using scanners to aid them in committing crimes or eluding
police? Down here we normally don't have a problem with that.

I use my R8500 for decoding quite often. Simply set the jumper as
described in the manual and use the AGC socket. Very simple to
do.

It is also important to remember that the person you are speaking of
admitted
to having other run ins with the law before this issue arose. If he TRULY
would
have had a "VERY good defense" then the prosecution would have dropped
the charges.

> Just as he had no heatlh insurance (!) for him or his family, it appears

He has NO evidence to back up the statments made because the issues
he is referring to never happened.

How sad that he repeatedly has to LIE.

In my experience, it's not that often that you program the scanner,
unless you travel a lot and want to monitor different areas as you
travel. Otherwise, you develop a list of frequencies for your area,
program them once, and then enjoy listening to them.

> The software, however, to do it by computer is $70, which seems a bit

Isn't the interface available from Radio Shack? And $70 seems
inexpensive enough for the extra utility it buys you.

4480. Radio-Shack PRO-2209

Newsgroup: rec.radio.scanner
Date: 2000-12-20 04:00:54 UTC
From: raynald38@my-deja.com
Message-ID: <91patl$5ji$1@nnrp1.deja.com>
Source record: 74127

My old PRO-2009 stopped working after a voltage surge (probably over 140V). Now, when I power it, it wont stop scanning channels 0 through 8, all set to frequency 000.000. The search function doesn't work and I cant enter any frequency manually (I can enter the frequency but it doesn't store in memory). After I took out IC9, and then put it back in place, some random frequencies were stored in the channels, and I could do a search, and it somehow worked until I powered it down, so the RF section seems OK. The voltages also seem OK.

Any ideas? Anybody got the schematics of this model?

Thanks

I would appreciate some information and guidance on scanning in Arlington and Alexandria Virginia. After doing a number of searches on the web, I am a little confused. The different websites I found seem to contradict themselves. Some say these towns use conventional freqs, others say they now are trunking. Some say these systems are ASTRO digital type systems. If someone could please answer the following questions with just simple yes or no answers, I would appreciate it:

Are both of these systems trunked?
If so, can they each be monitored by a trunking scanner or have they gone digital?
I assume all public safety for all of the cities under Arlington County use the Arlington trunk system?
Same question for Alexandria?
Do these frequency lists and map plans look correct?

System: Alexandria, City of
County: Alexandria
Type: II
Use: Police, Fire, Public Works

Frequencies:
854.4875 855.5125 855.5625 856.8375 857.8375
858.8375 859.8375 860.8375

System: Arlington County, Virginia
County: Arlington
Type: IIi
Fleet Map: Block 0 = S12, Block 2 -= S12, Block 4 = S0, Block 7 = S4
Use: Fire, Police, Sheriff

Frequencies:
856.4375 856.7625 856.9375 857.4375 856.7625
857.9375 858.4375 858.7625 858.9375 859.4375
859.7625 859.9375 860.4375 860.7625 860.9375

Please reply here so that others may benefit from your insights. If you don't wish to post to the newsgroup, please email me directly at psleprob@hotmail.com.

Thanks in advance.

My Pro-92 (20-522A) is the pits. I have scanned for 10 years, have had trunk trackers since they came out, but cannot figure out how to get this one to work. I entered preset fleet map assigning s-11 to all 7 blocks (for a type 1 system), programmed all 7 frequencies with the 'mot' mode, even programmed all user ID in the ID list (holds 100 ID). When I press scan (open or closed mode), it will not lock on data channel and trunk track. When I manually select a frequency, if there's activity on it, the scanner responds. If I manually select the data channel, I hear the buzz, and when there is activity on the system, at the bottom line of display I see the user ID show up (i.e. 400-02, 700-00), I also see the user ID flicker to another user ID during the same transmission. I have read on Pro92.com about these problems. I thought my unit using version 3.25 was supposed to be free of these problems? If anyon can tell me what I did wrong in programming the motorola type1 system, please e-mail me. If I cannot resolve this within a couple of weeks, I will refund the unit and wait until a more dependable unit comes to market.
Eric G.

I assume you have built a cable, but if not, see:
http://home.earthlink.net/~k7on/scan/bc895.htm

I have written some software to program my scanner.
The commands are very easy to use and you can type
them in from a terminal type program.

Good Luck.

Brian

I'm a newbie interested in a handheld scanner that has the features/capabilities of the Pro-92, but, that includes the military air freqs. I've read on earlier posts that the Pro-92 is not a top performer in its trunk tracking, so that is another negative.
I'm interested in a quality scanner that would be comparable to a Pro-92 with mil air freqs. Any scanners I should look into? (price is secondary to quality and features/capabilities, but I'd like ease of use too.)

Thanks in advance.

Yeah Bert try here http://www.iinc.com/ggcomm/repinfo.html
You might want to undo a few of the mods before you send it in ,if you do
-cause the guys a bit leery of working on majorly modified units.
Maybe a new LCD will take care of your display probs / maybe a new pot
will fix the audio.
Hard to tell.

Good luck
Jesse

Trunking on ScanStar does work but I have to agree that it is hard program to learn. I use E-Trax, TrunkTrac, and Trunker for serious tracking.

> By contrast the WinRadio software is far better and I can at least get
> the trunking software to work about half the time.

I do like the fact that users have submitted their own add-ons under the XRS and Rbasic programs. There are some cool programs. The Optocom also has open source but I am not sure why people have not taken advantage of it. I myself am working on a hardware/software add-on to the Optocom.

>Granted there is a BIG price
> difference in the two radios... but I do have
> BOTH (optocom & winradio) and I'll vote
> for the winradio. Can't comment on the ICOM .... don't own one.

I do not own a Winradio but I have played around a lot with a friend's. He does not have the trunking option yet ($100). It is not a bad radio. I have thought of buying one myself but I am out of ears. Remember that everything here is an opinion. My opinion is that the Optocom is a rock solid scanner.

> answer.

You posted lies.

> > How long ago did Cheek boot your boot off the
> > scanner radio list anyway? 8 years? 9 years ago?
>
> He never booted my boot.

Yes, for once you are right. He booted your ass right out the door and you have been on a vendetta ever since.

Anyone can do a search of your 10,000-plus posts to find out that your "contribution" as a self-appointed "member" of this newsgroup has consisted of invective, trolls, sniveling backstabbing and other sundry acts common to the lowliest miscreants to be found anywhere. At the same time he or she can read the discussions about your deviant behavior and incompetence in the field of radio technology.

Why anyone would bother is really irrelevant. One has but to read your daily rants and delusional blatter to see you for the unhappy, lowly bed pan washer that you are.

reposted. 9000XLT like new in the box. Box,antenna,paperwork,packing and
a
pristine scanner. Scanner has a couple hours use. You would not be able
to tell this from new. I guarantee it .Price is $240 plus $15 shipping
Priority Mail insured.
Scanner has a metal case so it is a little heavy. I accept a
postal money order or check (clear). Lower 48 US states only please.
You will not be
disappointed! I will consider a trade on a MINT condition modified
2006-2005 with a bright display light. I can give references per
request.

From: Arthur Davis <artellad@hitter.net>
Message-ID: <3A40C44D.60565BB2@hitter.net>
Source record: 74051

I bought a Hamtronics CVR-806 Receiving converter at a flea market today

that didn't come with an instruction sheet. The bottom says "subtract
382.000MHz" so I assume it a converter to bring 800-900 MHz frequencies
into the range of old scanners. The main problem I have is how to power

the unit so I can test it. The two antenna connections are self
explanitory, but there is a single black wire (about 18 inches long)
coming out of the "RCVR" coax grommet that is danglong and is connected
to on leg of a transistor inside the case. The PC board number is
marked "Hamtronics CA-432 UHF CONV". How do I power the unit and could
someone tell me what the specs are? I have searched deja.com for any
information and
came up with zero results. This is the second time I've posted this
message hoping just to get some
basic information. TIA, Art.

I had one and am kinda sorry I got rid of it. It worked well, and was
versatile enough that you could set up a bank of freqs you'd like to monitor
while driving including CB19, 2m calling freq. and also hwy patrol, etc.
The makers of my present car went to great lengths to see that I had no
place to install a decent sized radio, so I sold the 7 and bought a 12.
While it works okay, it is not nearly as useful as the BCT7. I'll have
another 7 when I get another car.

What else could possibly be the intent of a bill like this? Think about it: are CRIMINALS actually going to quit using scanners in commission of crimes, simply because there's a law on the books?

I can just see it now... "Hey, Joe...we're gonna to heist First National today...but leave the scanner at home, will ya? It's illegal now."

Just as with firearms, the real intent of these laws is to disarm/disable monitoring by law-abiding citizens.

While being a great conventional scanner (PL tone display & good sensitivity), the PRO-92 is a lousy choice for any form of trunk tracking.

My advice: get a Bearcat 245XLT for trunked monitoring and leave the PRO-92 to conventional frequencies. This is the combination I use in my mobile, and it works quite well.

Hugh made a bet that in one post he could bring out the Mackey fool and his band of child molesting supporters.

Hugh and the Mackey-Manboy society win again!

Get over it. Instead of reading this you could have been scanning!

A great argument made by an anonymous simpleton!

The rhetorical (i.e. don't answer it) question is since criminals by
definition
disregard laws, why have *any* laws in the first place?

> Just as with firearms, the real intent of these laws is to disarm/disable
> monitoring by law-abiding citizens.

No one forces you to have locks on the doors to your home. A deadbolt
doesn't stop
a criminal from kicking in the door or smashing through a window, but
just like
laws, you use the locks anyway, even though they're a nuisance. Almost
every law
infringes on the freedoms of law abiding people one way or the other,
but blame the
criminals for this, not the lawmakers (whom we elect...). You seem to
want to ignore
the fact that Kowall's bill did contain some verbiage to permit mobile
scanner usage by
those who'd simply registered to do so -- something Michigan's Motor
Vehicle Code (750.508)
has pretty much always required anyway, with few exceptions.

Tim

APCO-25 is a reconized digital format that alot of the Trunked system's use. It is a standard they came up with for manufactures to follow. There are also some system's that use a proprietary protocol instead.

If there is ever (Confirmed) a Digital board developed it would more than likely use this standard.

Hi Stephen,
If you remove all of the screws from the top of the receiver (except the four that surround the speaker) the top cover should lift off. Lift gently as there will be a wire going to the speaker but there is no need to detach this as you should have about 20 centimetres slack to play with.
At the very rear of the receiver you will see where the Two phono sockets exit the backplate
(just right of centre) to the left of these is the Jumper plug terminal. If you lift the little black plastic connector off of the prongs (you will see Three of them) you can then move it either to the left or right to correspond with
"Disc" or "AGC" which are marked on the circuit board.
Hope this is of some help.
Tom.
PS. When removing the top cover there may be some screws on the side of the radio.
Success with your decoding.

Remove the phillips screws and remove the 6 AA cells. Replace with similar (Radio Shack or ???) and squeeze it all back together. I've done it several times, it's not very hard to do.

That's what I said... it's not going to keep criminals from using scanners,
it's just there to tack on another charge to someone already charged with
another crime.

But, as I asked, is there really a problem with criminals using scanners?

Yes, College Station uses a Motorola Type II trunked radio system. You should be able to monitor it with any of the TrunkTracker radios on the market. For more information on frequencies and talkgroups go to http://www.trunkedradio.net/trunked/tx/college.htm.

This radio was known for its problems with cold solder joints.
A friend of mines 2004 worked for years then stopped for no
apparent reason. His had a cold solder joint that needed fixing.
Worked fine afterwards. Look closely at some of the larger
connection points such as the transformer connections or the
regulator connection points on the PC board.

Good Luck,
Eddie Bryant

Better yet, replace the original ni-cads with NiMH cells. You'll get twice the
time between recharges for only a few dollars more.

Sorry, but I refuse to pay a fee to the government in order to be granted permission to receive radio signals. Might have fit right in during the days of Nazi Germany or the Soviet Union, but not in America.

On the portable side of things, I've been very happy with the Diamond RH77CA rubber duck. MFJ also sells the exact same antenna, but with the MFJ logo on it. It's actually a dualband HT transmit antenna, purportedly also an 8-band receive. Regardless, I like mine.

Austin Condor is also supposed to be a really good scanner antenna.

This is really a general question, but I like to have the best, and the OPTOCOM seems to be one of the best scanners out on the market today...If I got one, being a newbie and all, do you guys think I could learn how to use it efficiently? Or is it one of those scanners where you need a P.h.D. before you can really get a hang of things. Thanks for your time.

The scanner takes 5 minutes to learn!

It's the software that you choose to buy afterwards or use the ones included
that take the learning curve.

4549. BC895XLT Review by Richard Wells

Newsgroup: rec.radio.scanner
Date: 2000-12-21 03:46:03 UTC
From: Turner Cress <cress@mail.com>
Message-ID: <%1f06.115955$IP1.3901247@news1.giganews.com>
Source record: 74094

Hi People,

I recently read a review by Richard Wells where he states that the Uniden BC895XLT is good at the following:

The BC895XLT provided excellent results and seems indicative of a triple conversion unit with good filtering. The only problems seemed to come on a few frequencies due to images of strong broadcast TV signals. And there are definitely not going to be cellular images heard. Not only does this radio do a great job of filtering and adjacent channel attenuation, but the IFs chosen will place cellular images way above the frequency range of this radio. For instance, a cordless phone conversation on 46.93MHz was detected at 808MHz!

Does this mean I would not be able to listen to cordless and cell phone frequencies? If so, how can this be a good thing, as this is one of my main interests...Thanks for your time.

Once again, we appear to have a FORGER on this newsgroup.

Skip Jackson has recently appeared on this NG making remarks & postings that can only be described as trouble-making.

Spending a few minutes reviewing posts on Deja, we find that our old longtime & well known trouble maker on this newsgroup, Michael Alexander, is hard at work again with his usual diattribes. But now he is forging as others!!!

Also notice that MamboKid, Skip Jackson, & Michael Alexander all the the same interests in motorcycle related newsgroups.

Once again, Michael Alexander is caught RED HANDED, causing troubles on rec.radio.scanner!!!!!!!!!!

****
Searching for the IP address that he used recently, we find the following postings for both "Skip Jackson" and "Mambo Kid"

http://www.deja.com/dnquery.xp?QRY=24.147.104.161&ST=MS&svcclass=dncurrent&DBS=2

****
Then we find the same e-mail address as was used for "mambokid", tied to the identity of "Michael Alexander"!!!!!!!!!!!!!!!

You probably already paid a fee to monitor the radio signals -- taxes
paid on the scanner(s) and any peripherals like coax, antennas,
connectors, or even the electricity or batteries used to power it/them.

You really have a hangup about any sort of infringement that you don't
like being indicative of Nazism and downright un-American. That's your
prerogative, however for the purposes of public debate, you need to make
more of an effort to be logical and/or understand the facts of the
matter. To otherwise try to argue the matter just makes you appear to
be quite foolish, but then that'd explain your anonymity.

Who mentioned any sort of fee? The MSP permit form is available on
the web as an Acrobat document. There is no fee to access the web page,
download the file, or view it. The Acrobat viewer program is also
free. I deeply regret to inform you that yes, you'll probably incur
some expenses in printing the form out, filling the application out, and
mailing it in -- perhaps about 40 cents total. You could save most of
that by dropping off the completed application in-person. MSP will pay
to process your application, and assuming it is granted, they'll pay to
create & mail you a permit. I'd wager their expenses would be greater
than yours.

The document is at: http://www.mpscs.com/html/forms.html & it is form
COM-22.

Do you actually live in Michigan and are (I should say would have
been...) affected by the matter, or do you just have a habit of making
ill-informed diatribes about perceived civil rights violations wherever
your imagination tells you they're about to take place?

Nothing personal, but speaking of gov't fees/expenditures & such, if
you attended public schools, you & the taxpayers were indeed rip-off!
;)

Sincerely,

Tim

A Michigan resident & scanner user.

What you have is a receiving converter for 430MHz FM. It puts out in the
28-30MHz band.

1. Press PROG then TRUNK
2. Select bank #
3. Press up or down key 'till E2-800 appears then press E
4. Enter all 15 freqs pressing E then PROG after each one
5. Press E after last freq is in then SRC
6. Scanner will search for data channel and when found will start
trunking
7. Turn up volume
8. Set squelch fully clockwise
7. press TRUNK to stop trunking

The Pro 2052 has 108-512, the Uniden BC895XLT has 216-512, and
the new BC780XLT has 25-512 coverage if you don't mind base models.
Check them out here:

What if Portland decides to expand and add splinters. Don't bet it can't happen
'cuz it does.

>
>
> It has some drawbacks, such as a lack of sub-banks for ID's, and the

> issue for me.

Ummmmm......
These are MAJOR flaws for a trunker. Sorry, I don't want to rip your purchase but
the PRO-92 is not a radio you would see a professional using. Alpha tags are cool
but learning your talkgroup numbers is cooler. I monitor 8 different systems and
conventional in california and a 2 second delay between systems is unacceptable.
It's not a good beginner radio, it's a bitch to operate.
As a professional with 25 years in scanning for profit...the pro-92 is not a radio
my company would ever consider due to it's fatal design.

Sorry...
That is the way it is...debate and justify all you want...but i'm a pro...and the
Pro-92 is not pro.

>
>
> But on the positive side; alpha-lables, 100 ID's per bank, trunk and
> conventional at the same time, pl tones, multiple search-range
> scanning, and more.
>

Take away the alpha tags and pl tones and you have a BC-245...that actually works
in the conventional and trunked mode flawlessly. The 245 does sub groups. I promise
you If I placed a 245 and 92 side by side in Portland the 245 would hear more than
the pro-92...cuz the 92 misses on all type 2 systems...just a fact.

The 895xlt will pick up cordless-not cell. That being said this is as good as scanner as you can buy for the money. I have 2 right now,a 9000xlt, UBC9000 and a Pro 2006. The 895xlt does the best at picking up distant transmissions. Not all scanners that pick up cell are the greatest thing on earth.

If you live outside the US, then any retailer will be able to help you.

Here in the USA,, the FCC mandates that any scanner radio imported or used must have the 800 MHz cellular frequency range blocked.

Use or possession of a scanner that will monitor the cellular frequencies is quite illegal unless you are authorized LAW ENFORCEMENT or a CELLULAR PHONE COMPANY TEC.

BTW: As most cellular phones are now Digital, the prospect of hearing anything is pretty slim... sides, the monitoring of cell calls is quite difficult due to different towers and such.

Look under alt.radio.scanner for a partial list of older scanners that are cell-able or able to be converted, but if you are British, Canadian, Caribbean or some other resident you can walk into a shop and buy a scanner that is ready for the band you seek.

(Please no direct emails to this address, all email will be forwarded to tosemail1@aol.com and or spam@aol.com. - I will read all replies here, thanks.)

>will do for what you're doing. The Libretto 50CT (the first and
>weakest of the series) came with 16MB RAM, a 70 MHz Pentium I, a
>700 MB a 700 MB HD and a 640x480 display (6.1" diagonal).

Finally got one, however. It took me a while to get the PCMCIA floppy configured, the last owner "changed" things. Among them, audio, finally got it to work on wav files but not midi (it locks up the PC and it has to be reset). The video refused to work at better than 16 colors, another "change" in the system.

I ordered the original setup floppies from Toshiba but they have no idea when they will ship, 2 days? 2 weeks?

Jamie, do you have one? If so can you find the time to email me and help me get this item up to speed? If _anyone_ is using a Libretto 50Ct and can help it'd be appreciated. You can use stanton_josh at hotmail.com to reach me.

I've used Toshiba's Web site to no avail, and w/o the original setup disks this will take forever to get right.

The CE program does work in the DOS window to control my 2004 at least, just need to configure the video and audio correctly. The PC was even smaller than I thought Jamie, looks like you could fit 4 of 'em into a PRO-2004 case, neat "toy".

I'll grant that some of TMR's comments were not based upon any apparent logic. But, how do you counter a clear statement of opinion like the one below?

> > The cost is a secondary issue. Even if there is no cost, do you really believe
> > that, in a free society, an individual should be required to obtain permission
> > from the government in order to listen to radio transmissions?

That is not an unreasonable position (although it might be unrealistic). Historically, Americans have been allowed to monitor radio transmissions without any practical limitation as long as they did not divulge what was heard. This situation existed from the dawn of radio at the end of the 19th Century through 1934, when the federal government first started regulating radio, until the mid-1980s when particular radio services were suddenly placed off-limits by industry-sponsored legislation.

So, if a citizen feels that a newly imposed requirement to get permission before listening to radio traffic is an infringement upon something that historically has been unrestricted, what is YOUR informed and logical argument against that position?

(BTW, I do comprehend the difference between general regulation of radio monitoring and a requirement to get a permit before placing a piece of equipment into one's automobile. The courts have held that such a regulation is a proper exercise of a state's police power.)

Source record: 73936
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amature.space

**** Followups set to rec.radio.scanner

I've been using my Radio Shack PRO-2006 to listen
to both Meteor and NOAA weather satellites. I've
obtained WxSat to receive the demodulated audio
and produce a gray scale bitmap of the view.

I understand the bandwith of the typical scanner
is too narrow to properly demodulate the signal.
I also understand the radio's IF filter can be
removed and replaced with a 0.01 cap to improve
the bandwith considerably and improve the weather
picture produced by WxSat.

I've looked at my typical scanner mod sites but have
yet to tun across a site which describes this bandwith
modification.

Any help would be appreciated. Can anyone tell the
the location (RS2006) of this IF filter?

>But, as I asked, is there really a problem with criminals using scanners?

I've been listening to the detectives/surveillance channels of several Dallas-area LEAs for several years, and have yet to hear a single instance in which there was evidence that the persons being watched/tracked/apprehended had a clue what a scanner was, or how the police communicate. Ditto for traffic stops by any number of agencies.

If I were going to propose really bad legislation based on personal experience, I would send forth the US Military to impound ALL equipment worldwide that is capable of operating on 146.940 MHz FM, since I actually did hear criminals using that (amateur 2 Meter) frequency to facilitate a burglary (the lookout during a warehouse break-in told the inside men that the "blue and whites" were in the area). Once. In Kansas City in 1977.

I had a catastrophic leak problem while recharging those Rayovac rechargeable alkalines in my Alinco 2 meter hand held receiver. The battery acid did terrible damage.
So if you experiment, do not try to charge these batteries inside the equipment.

Go to the link below then to scanner antenna, you can buy these antennas from just about any antenna shop on the web.

I use a discone w/a whip on top (for vhf low) just like the one on the web page, this would fit in an attic as well as the spectra.

Very easily. His premise is wrong to begin with. It's not a free
society! If he (& you?) truly thought it was, I'd like to think he/you
would have many more important 'civil rights' violations to focus on,
though the numbskull did have a habit of linking his scanner conspiracy
with his gun-control one. ;) I'm amused at how the in the grand scheme
of the conspiracies and with millions (??) of scanners out there, these
paranoid fools think that the New World Order game plan will be to
ban/confiscate scanners, rather than just make sure the battalions of
'jack-booted government thugs' simply use encrypted radios! Oh, sorry
-- that's the REAL reason agencies are switching to ASTRO/AEGIS/APCO 25!
;)

Further, he can't comprehend that the factual issue isn't to require
advance approval to monitor comms, it's to require approval --with some
pretty broad exceptions-- over who will use a scanner in a car.

> That is not an unreasonable position (although it might be unrealistic).
> Historically, Americans have been allowed to monitor radio transmissions

> placed off-limits by industry-sponsored legislation.

History works both ways, Dave. You're using broad history to try to
make a
point, but I could make a point by stating that recent history indicates
criminals are starting to use technology as a force-multiplier. I
believe the
solution is for the police to practice better COMSEC/OPSEC and encrypt
any
traffic they choose to. HOWEVER I have been specifically focussing on
the
issue of Michigan's 'Scanner Bill' and challenging the meritless
postings of
'TooManyScanners.' I'd been arguing facts, and he has no facts to
defend, so he kept
hopping to a barrell-full of brief philosophical attempts to rebut me.

> So, if a citizen feels that a newly imposed requirement to get permission
> before listening to radio traffic is an infringement upon something that
> historically has been unrestricted, what is YOUR informed and logical
> argument against that position?

Michigan does have a history of restricting mobile scanner use, as I
pointed out in a
prior post.

> (BTW, I do comprehend the difference between general regulation of radio
> monitoring and a requirement to get a permit before placing a piece of
> equipment into one's automobile. The courts have held that such a
> regulation is a proper exercise of a state's police power.)

Then it's too bad you followed Half-wit's erroneous verbiage about the
proposed law affecting being able to monitor communications, when it
clearly
was all about just requiring a permit to monitor law enforcement comms
in a
motor vehicle, and it makes me scratch my head wondering what further
argument you wanted
to receive from me.

I'm not interested in much of a philosophical debate, but I was and am
eager to
jump in and quickly dispute nonsensical info like what 'TooManyRadios'
provided, before other
people assume the info was correct, and then base their own opinions on
it & have everything
snowball from there.

Radio Shack's last top of the line model was a TRC-465 or their
"chrome classic" radio. I thought you had a nice Grant or 148GTL
or maybe a Uniden sideband unit. If you're lucky, you might get
$20.00 a piece for them IF you have the boxes. The Shack is the
last place I'd buy a CB radio from.

The BC700A has several different programmable channels (it's outside in my truck and I don't have the manual handy, so I don't remember how many). It's got several channels in the "private" mode that you can use to put in whatever frequencies you want. It's also got a bank of channels in both the "police" and "fire" banks. To enter a frequency, you have to either scan until you find the channel you want, then hit enter, or use the up/down arrow keys to get to the frequency you want, then hit enter.

When you push the "private" button, it only scans the channels in that bank, whatever you've programmed in. When you push the "police" or "fire" buttons, it scans all the regular police/fire frequencies, plus the channels you programmed in.

Though a few will whine, the best place to sell it is on Ebay. You
can see how much they've sold for during the last 30 days by
searching Ebay's completed auctions. Here's a shortcut:

http://search-completed.ebay.com/cgi-bin/texis/ebaycomplete/results.html?que
ry=pro%2D2035&SortProperty=MetaEndSort&ebaytag1=ebayreg&ht=1

Long link, you may have to cut and paste.

Good luck,

Robert

After checking it out last night on the way to work, I rediscovered that the
scanner has a total of 50 programmable channels, along with the <large
number> pre-programmed police, fire/amb, marine, aero, and weather channels.

The "Private" bank has 20 programmable channels, the "Police" bank has
another 20, and the "Fire/Emer" bank has 10.

Winradio, by far.

Here are all the sites I found so far, dedicated to Winradio software

http://www.winradio.com/home/download,htm
http://www.winradio.com/home/ds.htm
http://www.winradio.com/home/trunking.htm
http://www.winradio.com/home/database.htm
http://www.winradio.com/home/fskdecoder.htm
http://www.winradio.com/home/developer.htm
http://www.winradio.com/home/macradio.htm
http://www.winradio.com/home/labview.htm
http://xrs.winradio.com
http://www.linradio.com
http://www.rbasic.com

I am not that much into the developer stuff (although I am trying
to write a program in Radio Basic) but I do love the XRS plugins
on http://xrs.winradio.com. They release a new plugin every month
or so, all free.

Hope this helps.

Martin

> solution is for the police to practice better COMSEC/OPSEC and encrypt

I suppose you have a point, although there is little more than unsupported anecdote and broad generalities to support the idea that criminals are making a habit of using radio equipment to evade the police. Out of hundreds of thousands of arrests every year, only two or three are ever publicized wherein radio equipment was found at the scene. They usually make a very big deal out of those. This convinces me of the rarity of such events, not their frequency.

> motor vehicle, and it makes me scratch my head wondering what further
> argument you wanted to receive from me.

I was wondering if you had any argument beyond "nobody has a right to monitor the police anyway." That seemed to be your main point, and it is a questionable premise legally. I'm not going to argue the point here. I've already put up a website about it and don't have time to reinvent the wheel. http://rapid-media.org

> I'm not interested in much of a philosophical debate, but I was and am

> people assume the info was correct, and then base their own opinions on

OK, so you were trying to provide a service. I do not intend to question your motives in that regard, but it seems that your technique was somewhat ad hominem at times. I don't pay much attention to arguments that sound like, "I will only rely on facts and logic, you moron." I was also beginning to suspect that you could be a police officer yourself. While the officers in my grad school classes are very articulate and can argue based upon sound reasoning, there is a general discomfort with the idea of civilians knowing too much about what the police do from day to day.

If the government enacts legislation which requires getting permission to
monitor their communications, this DOES directly affect an individuals (legal)
ability to monitor such communications.

This is the argument currently being advanced by Alachua County, Florida. Law enforcement agencies there have recently migrated to a digital ASTRO system and are refusing to give media access to the codes.

Fortunately, Florida's "sunshine law" (open public records access) provides a remedy for such would-be censors of this information. Hopefully, the media will have the guts to pursue a legal challenge on these grounds.

I am looking for anyone who has the relm pc programming kit for the mpv series of radios. I have a few questions concerning the benefits the software offers over just taking the cover off and programming. I am also curios where the cable plugs into the radio and could a vertex cable work in it's place. And is the software capable of programming the whs 150 and 450 models. I guess what I am getting at is whether or not this damn software is really worth the 225.00 they are asking for it.
Relm has been good about pricing their equiptment, but the software price is kinda high compared to other manufacturers.

Please send posts to
FireRSQ1@aol.com

Thanks in advance

Hey Dave..
I think we're outta luck, they've moved to *digital* 8/900mhz which is
indecipherable.
It's a pity, my Fire Dept. relied heavily on being able to monitor their
freq.
Let me know if you get any more info..

Radio Shack's last top of the line model was a TRC-465 or their
"chrome classic" radio. I thought you had a nice Grant or 148GTL
or maybe a Uniden sideband unit. If you're lucky, you might get
$20.00 a piece for them IF you have the boxes. The Shack is the
last place I'd buy a CB radio from.

Isn't it special that everyones such an authority on everything? I'm only
trying to sell my radios..I do not recall asking for an opinion.Like it's
said...opinions are like assholes.....

Well, I disagree with some of that logic. Very few spies are caught,
but
that doesn't mean there are very few spies, and that counterintelligence
concerns
are wasted.

> Out of
> hundreds of thousands of arrests every year, only two or three are ever
> publicized wherein radio equipment was found at the scene.

What's your source for those statistics? Talk about "broad
generalities..."!

> They usually
> make a very big deal out of those. This convinces me of the rarity of such
> events, not their frequency.

Unfortunately, you assume that because few criminals with scanners are
caught (even
worse, your notion is based on not seeing many media reports linking
scanners with
crimes), there are few criminals with scanners. The other possibility
is that few
criminals with scanners are caught because the scanner can be a great
tool to avoid
detection & capture. I think the truth is somewhere in between.

> > motor vehicle, and it makes me scratch my head wondering what further
> > argument you wanted to receive from me.
>
> I was wondering if you had any argument beyond "nobody has a right to

> questionable premise legally. I'm not going to argue the point here.

Good grief, this is going downhill... I never came close to making
that
argument, it's not my main point, it's not any point I have made nor
could
a reasonable person allude that I'd made it.

> > I'm not interested in much of a philosophical debate, but I was and am

> ad hominem at times.

I've been attacking a person's statements, then stating deductions
about them, based on their
comments. If that fits your definition of an ad hominem attack, that's
fine with me.

> I was also
> beginning to suspect that you could be a police officer yourself.

Not that I find it relevent, because I think my prior comments are
accurate &
sensible regardless of my experience-level on the matter, but I have the
benefit
of understanding THREE sides of the issue.

1. "Criminal' -- In days of
my misspent youth, communications intelligence from a scanner greatly
aided
me in getting away with minor things that the police would certainly
have had
an interest in (i.e. painting the high school guard shack pink & green
as a
'senior prank' -- police were dispatched while the act was in progress,
I
heard the dispatch & we got outta there quick).

2. Civillian motorist with a scanner -- Spotted felony/misdemeanor
suspect(s) mentioned in intercepted
police broadcasts, contacted police & provided location info leading to
detaining/arrest of
the suspects).

3. Working on law enforcement investigative operations where scanners
were used to
a varying degree of success in a criminal enterprise.

> While the
> officers in my grad school classes are very articulate and can argue based
> upon sound reasoning, there is a general discomfort with the idea of

> civilians knowing too much about what the police do from day to day.

The obvious response is "What's wrong with them being concerned with
operational security, and what the hell does that have to do with
Michigan's
law requiring people who want to use a scanner in their car to register
with
MSP?"

I also assume, with a strong basis in fact, that most criminals have no idea
what a scanner is or why they should use one. The vast majority of
criminals are just not that bright.

> > OK, so you were trying to provide a service. I do not intend to

Bid just $2.50 over the present amount, and you can own this scanner with all the accessories. It is a very recent addition to my scanner family and comes with:

1- Uniden BC895XLT trunk tracking scanner (< 5 months old) MINT.
2- External monitor speaker with cable and hookup (excellent sound).
3- External base scanning antenna (really REALLY pulls in the signals).
4- 10 feet (and up to 100ft) of RG 8/u low loss cable with PL259 ends.
5- PL259 to BNC connector for the radio to base antenna.
6- The computer COM port cable to control the scanner from the computer.
7- Full version of AirSCAN on CD- A great freeware product I wrote ;) to check
out AirSCAN, goto http://people.mn.mediaone.net/slyster7/radio/index.htm

These items cost me a LOT more than $170 (the current bid).

To check it out, goto ebay item number 1202978544
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1202978544

Try http://www.radio-portal.org
click on "Search in broad"
and combine the categories "Antennas" OR "Modifications"

You may also want to combine "Antennas" AND "VHF/UHF"
to get some scanner antenna pages.

Further URLs are always appreciated!

Merry Xmas to everybody

I am currently working on a set of utilities, such as Search Logging, Station Display, Backup/Cloning, and Remote Control (securely listen to and control your scanner from anywhere in the world!) on my 895. Unfortunately, I do not have a 245, and unless my financial situation improves dramatically (I'm caring for my Dad after his stroke), I am unlikely to be able to afford a 780 in the near future, so I have no way to experiment. Still, I would like to be able to make my utilities as compatible as possible.

3 Questions.

1. Does anyone have a complete and up-to-date list of control codes for the 245, 780, and any other non-Uniden scanners?

2. The 895 is notoriously easy to overrun, requiring an explicit delay between characters, due to the lack of handshaking. Does anyone know if the 245 and 780 have the same limitation?

3. Do the 245 and 780 put out the "C" string from PM and MA commands in the exact same format? (ex. C001 F01625500 TF DN LF AF RF C00)?

If anyone is interested in my utilities, feel free to drop me a line. I don't expect them to stand up to the commercial programs like WinScan, ScanCat Gold, etc. But then again, they will be free!

go to uniden online site and download the manual for the bc350. It is basically the same unit. The programming is really backwards compared to other scanners. You definately need a manual. It is in pdf format, you need to get adobe acrobat reader if you don't have it already, it is free online at many places like download.com

Per the Operating Guide that came with my BC780XLT today (Fri 12/22/00), it scans 100cps in conventional mode. As with other Trunktrackers, it searches up to 300 freq per sec in Turbo mode.

I have a pro 2006 in great shape, it looks nearly new. But it only picks up about half the frequencies that are active, I have put another scanner next to it and confirmed that it misses about 50% of active transmissions.

Even more interesting--when I find a conversation that it is not picking up, I try to manually go to it on the 2006, in a limit or direct search with no squelch--and it refuses to stop on that active channel--like it is repelling that frequency that is active! Anyone familiar with this problem?

The 2004 has problems with an attenuator switch on the back -
it gets loose or whatever and causes the radio to receive in the
attenuated mode even when it's set to have no attenuation. I
don't know if the 2006 has the same switch, but if it does, then
I'd suggest you lock the scanner on a constant transmission
like one of the NOAA weather frequencies between 162.4 &
162.55 and play with the switch to see if there's any improvement.

No, it cannot.

When the eclipse happens depends on where you live. On the West coast of
the US, it is at maximum at sunrise.

At best, the coverage is 60% - e.g. only a partial eclipse.

I just bought my father a scanner for Christmas. He will be using it in Melbourne Florida for part of the year and I was hoping that someone would have some frequencies, or a site that would have them for that area.

Thanks in advance

email to dweisman5<AT>home<DOT>com if you want.

<Ignorance Mode>
I'm not sure where Melbourne Fla is... :-)
Close to Palm Beach (home of the dimpled ballot) ?
http://expage.com/pbscanner

I agree. While his personality was not what many people would consider
"socially acceptable", he certainly knew the 200x series of scanner.

:COMPANY TEC.

Wrong. Listening to the cellular frequencies is illegal - even for
police unless they have a warrant. Then they can only listen to the
conversations of the people named in the warrant.

Possession and use of a cellular capable scanner is totally legal, at
least in places where scanner use itself is not illegal.

Of course, I am only talking about the US. From what I understand, it
is not illegal to listen to cellular conversations in Canada.

I didn't realize the HB-232 was a baseband audio device nor did I realize the RS200x series of scanners were basically baseband audio devices. Thanks for sharing your insight.

Got notification today from my ISP direct and from corporate IT gurus
about this virus - plus a 'sample' someone sent me. OS/2 ignores it,
so I got a look at it. My subject line was Snowhite and the Seven
Dwarfs - The REAL story!, attachment was midgets.scr (23040). Moved
it to an isolated W98 box and - well, your warning is valid in this
case. The kiddies are at work again, looks like.

As far as remounting your discone outside, that would be a good idea. I've read somewhere that placing the antenna in the attic does attenuate the signal somewhat, I think the amount was about 3 dB, but I'm not sure. I know that's not much, but as a discone has no gain, every little bit helps. If your house has a peak roof, not flat, can you mount the antenna on the backside of your house so the top is just below the top of the roof? That way it wouldn't be visible from the street, so less objectionable.

I am looking for frequencies specific to Cox Cable in New Orleans, assuming they may be different from system to system. I hear a good amount of what seems to be "leakage" on my BC895XLT, and assume that it's coming from around the neighborhood. Some of it I know is cable channels from the audio I hear, and I'm curious to find out which channels they are. I've found some generic FAQs out there that give info like below, but am wondering if something more specific can be found....
thanks!
cb

Cable TV (IRC) [76.605]
[EIA IS-132]
Ch MHz
2 - 13 54 - 216 (same as broadcast VHF)
14 - 22 120 - 174 Mid band Ch. A-I
23 - 36 216 - 300 Super band J-W
37 - 53 300 - 402 Hyper band AA-QQ
54 - 64 402 - 468 " "
65 - 94 468 - 648 (Ultra band)
95 - 99 90 - 120 Low band A5-A1
100 -125 648 - 804 (Ultra band)

I work for an ISP, i can say first hand that this virus IS real. From what ive seen it comes as an e-mail, ususally titled "Show white and the 7 dwarves..." I have seen a few variants of the virus, it seems to mutate itself into different viruses but i dont know that for sure. I think the only way you can be infected is if you OPEN the attatchment. ive seen the attatchments come in a few different flavors, one was an EXE another was an SCR.

Good Luck.

A friend has used a Pro2004 (an earlier version fo the 2006) for WXsatellite
reception. He used the WFM (desinged for FM BCB 88MHz-108MHz) mode.
That positon is really way too wide, but it is a goot starting point.
You can get an decent image with a set of crossed dipoles and no preamp.
A better antenna and/or preamp will help.
I use an Icom PCR1000 for WX sat recpetion and, while the "correct" filter
is much better, I get good qualitly images in the WFM Mode.
Why not try it first in the WFM mode, before chopping up your radio.
IF the Pro2006 uses the same circuitry as the 2004,
find T9, T10 and T11 on the linear circuit board.T9 is coupled to t10 via a
filter, then T10 is coupled to T11 via a filter. Filters are labled XF-1, and
XF-2, the part nubmer is MF48RB and operate at 48.5MHz.
IC2(TK10420) is a converter that shiftst he 48.5MHz down to 0.455MHz/455KHz.
There is a ceramic(CF2) filter between pins 3 and 5,. If you are really brave,
remove CF2 and put the cap from pin 3 to pin 5.
But I would try the WFM mode first.
Good luck

4689. Any IC-R75 - Base Receiver reviews?

I am interested in a new Uniden 780 XLT, and was wondering if I could get all the very best prices folks here paid for it by going to someone they know in the business, and that they do also do business with all the time.

I am sure that such info would be very helpful to ME in getting a good price.

Thanks

4692. Canadian Frequency Question

Newsgroup: rec.radio.scanner
Date: 2000-12-23 20:05:59 UTC
From: "David E. Lafferty" <dplaff@alltel.net>
Message-ID: <9230k9$a0h$1@iac5.navix.net>
Source record: 73986

I recently picked up a Motorola Base Station from Canada.
The TX/RX is marked as 163.080 MHz. This frequency
is not listed for any service in my references for the US.
Does anyone know what this frequency is used for in Canada?
Thanks,
David K5DEL

Hi Steve,
Sadly this is a known "problem" with the 2006. The fix is a replacement
of the LCD. It is available from Radio Shack Parts. The last time I
ordered one I purchased two, so could have one as a back-up in the
future. I am not selling mine, but the number on it is GE-88 D-7738A.
I do not remember if it is the manufacturer's or Radio Shack's part number.
Good luck,
Pete

I tried WFM before. The WFM signal seemed MUCH more attenuated. I'd
judge it is perhaps 1/10 as loud. This limits the range of
reception greatly. I just (2:30PM EST) tried it with a NOAA
sat to confirm this. While is might be a bot clearer (agrueable)
it is so faint it's unusable.

> You can get an decent image with a set of crossed dipoles and no preamp.
> A better antenna and/or preamp will help.

I've got a RS Dipole and RG-6 Coax. I understand the Diplole is not
the best antennae for APT reception. I'm considering a Turnstlye or
QFH but I figure my biggest hurdle is my Scanner IF.

> I use an Icom PCR1000 for WX sat recpetion and, while the "correct" filter
> is much better, I get good qualitly images in the WFM Mode.

Do you notice the signal is MUCH quieter in WFM mode?

> Why not try it first in the WFM mode, before chopping up your radio.

Either my WFM is hosed...or my RS2006 WFM is dissimilar to your PCR1000 WFM.

> There is a ceramic(CF2) filter between pins 3 and 5,. If you are really brave,
> remove CF2 and put the cap from pin 3 to pin 5.

My scanner appears to use different reference designators than you refer to.

However, I do see two light blue boxes labled CF3 and CF4. These devices
are labled (CF3, K F455M) and (CF4, K 455R). Since CF4 is co-located
with IC2 (NFM, TK10420). I think this might be the animal I'm looking for.

I noted in an earlier post, (see link below) Bill Cheek published a paper
describing tapping into the baseband audio output directly. This tap point
for the 2006 is IC-2 pin 9,6 for NFM/WFM respectively. This appears to be
another option which may allow APT reception without any real hacking.

http://ecco.bsee.swin.edu.au/chronos/metsat/cheekmods.html

Any comments on connecting this tap point to the input of my PC
sound card directly... or perhaps via 10K?

Thanks again.

Be more specific as to what in the UCRs have you convinced that "out
of hundreds of thousands of arrests each year, only two or three are
ever publicized wherein radio equipment was found at the scene." I
think that's BS.

> > Unfortunately, you assume that because few criminals with scanners are

But it's the bright ones that need to be worried about, and it's the
bright ones who are caught infrequently enough to lead you & some
ignorant others to assume such a high percentage have "no idea what a
scanner is."

My 'Half-Wit' label applies to him quite well, for reasons
demonstrated.
If I said you were a bedwetter, that'd be an ad-hominem attack,
because I have no basis to support that allegation and it's irrelevant
to the thread. If I said I think your cogency is going downhill in this
thread & that you're deliberately trying to change the subject & avoid
on-point responses to my prior on-point response, that'd be a relevant
characterization supported by evidence, and thus not fit my definition
of an ad-hominem attack, regardless of whether or not you like it.

In my (Radio shack) freq and talk group guide I have 25 freqs.
Try entering all these:
1-856.3625
2-856.3875
3-856.4125
4-857.3625
5-857.3875
6-857.4125
7-858.3625
8-858.3875
9-858.4125
10-859.3625
11-859.3875
12-859.4125
13-860.3625
14-860.3875
15-860.4125
16-866.0125
17-866.4625
18-866.5125

19-866.7625
20-867.0125
21-867.5125
22-868.0125
23-868.325
24-868.5875
25-868.8375
If you here a data channel (noise) while programming these in
you should have some luck.
VHF travels better and farther than 800 Mhz. I've found that the
stock antenna doesn't perform all that well. Try using a whip (Radio
shack #20-006,$10 works great for me).

Any NFM signal received in WFM mode will be quieter because the detector is designed for a wider signal. An FM signal is modulated by shifting the carrier frequency up and down in reference to the modulating signal. The only difference between the two modes is the amount of deviation transmitted.

A NFM signal can use anywhere from 3 to 7 KHz. A WFM signal is about 20KHz.

If you try to listen to TV audio with a NFM scanner, the quiet portions sound distorted and the loud parts sound like shot noise. Once the signal is wider then the discrimintor/IF circuits, it is not received anymore.

Indeed. My RS2006 NFM deviation is 20dB@3kHz deviation. The WFM deviation is
30dB @ 22.5Khz.

The following site discusses the need for a ~50Khz IF bandwith.
http://www.rig.org.uk/Imaging/APT/apt.html. This requirement makes
the WFM of my scanner look more attractive then the NFM. However, the
signal (both speaker and tape out) is too low to be useful? This doesn't
seem to make sense since the bandwith utilized by the satellite signal
appears to exceed even the WFM capability of my scanner.

I'm stuck with NFM.. but this has such a limited bandwith the signal
is certainly degraded.

Wierd ?

Indeed. My RS2006 NFM deviation is 6dB@9kHz deviation. The WFM deviation is
6dB@150Khz.

The following site discusses the need for a ~50Khz IF bandwith.
http://www.rig.org.uk/Imaging/APT/apt.html. This requirement makes
the WFM of my scanner look no more attractive then the NFM. One is
too narrow, one is too broad.

4713. Re: automatic meter readers

Newsgroup: rec.radio.scanner
Date: 2000-12-24 00:10:20 UTC
From: Mike B <mbart@lvcm.com>
Message-ID: <3A453EEC.6CE4887D@lvcm.com>
Source record: 73858

As I understand it, the van issues a "wakeup" call to which the meter responds. The principal reason for working this way is that the life of the battery is greatly enhanced by allowing the remote device to "sleep" except when the information is "requested" by the passing of a van, or a handheld device by a service person.

juiceandheat@yahoo.com wrote:

I'm not changing the subject. I am accusing you, with perfect accuracy, of name-calling and of attempting to defend that behavior as a valid debating technique by parsing the definition of "ad hominem" into something that appears to support your position.

I am also demanding, as is my right in something that you claim to be a fact-based debate, that you cite your authorities for your claims. So far, you've only been flipping the pages in your personal dictionary. Hardly convincing....

4716. Re: Any IC-R75 - Base Receiver reviews?

Yes, radio portal lists 3 URLs. Do a search for ICOM IC-R75 via
http://www.radio-portal.org
within the category "Reviews"

If you want reviews for other receivers, click on "Search in broad" and
combine the categories "Receivers" and "Reviews".

Or the categories "Scanners" and "Reviews"

Regards and merry Christmas,

I doubt that it matters. I have an "A". Given the choice I'd likely opt
for an "A", as much for political reasons as any other, I guess; but overall
performance seems identical according to the tests I've seen reported.

> 2) Is the Pro-94 also made by OptoElectronics
> (like the Pro-92) or is it the BC245XLT in disguise?

Neither. The '92 is "made" (that is to say, designed though not
necessarily assembled) by GRE not by OptoElectroincs. The 94 is a Uniden clone.

Does a scanner really provide much help, in the commission of crime
(or evading cops)? I'm asking seriously here -- I'm relatively new to
scanning, but most of the police calls I hear just indicate that the
cops know something's going on, because it's been called in. I
haven't heard too many where the call would really provide the crooks
with much useful information. Sure, you'll hear that a cop is
pursuing a suspect going north on Highway 89 -- but the suspect
probably already knows that, from the blue lights in the mirror....

It sure can, Urb. It can provide what's known in the military as
Essential Elements of Friendly Information.

The bad guys can learn when they've been detected, how many units are
responding, and sometimes where they're responding from, along with
other info. If they start to get away in a car, they can learn if
their vehicle description & direction of travel are known, etc.

The following stations are licensed for 163.080 simplex MHz in Canada.
That frequency is also paired with other frequencies for split operation
(repeaters, etc.) I didn't include those here, since you never said
anything about the unit's transmit and receive not being the same.

Wow, lots of great info, thanks. I had no idea the backlight was such a problem on so many radios RS sold. I do have decent soldering skills so I will probably order the part from Roberts Scanner Service.

I've noted the number of controversial posts regarding him.
He was certainly seen as a jerk in the eyes of some.

I've also noted your name attached to a toilet-load of
horseshit ramblings in the few months I've been monitoring
this newsgroup. At best, this appears to be the pot calling
the kettle black.

Damark Warning

On 12/24/00 I received my monthly credit card statement. I noticed an unauthorized charge for $109.99 from Damark, a nationally known catalog retailer. Because they sell radios, electronics and high tech things, I thought that a warning to my friends here would be appropriate. The problem, I haven't had any contact with this company in over THREE years. I called the telephone number 1-800-597-1001 and, after playing with the automatic response system, I finally got through to an operator. I asked what this charge was, as I didn't remember ordering anything from them. A customer representative named Paula advised that it was a membership charge. I immediately told her I didn't authorize it and didn't want it. She agreed to credit my card for $103.99. I advised her that my charge was $109.99. She said the $6.00 was for shipping and handling. Shipping and handling of what? She said she would have their Consumer Department send me the forms for the $6.00 portion of the refund. The representative then asked to confirm my name and mailing address. This company had my old business address, I retired nearly two years ago, and the company's name instead of mine. Obviously, contrary to their "we tape everything message", they couldn't have verified anything for me, as 1. I don't work for the institution they billed, 2. they billed me personally and 3. they didn't even know my name. The state's Attorney General has recently filed charges against AT&T for fraudulent billing in a similar manner, so am sure they won't hesitate to go after these people. I feel sorry for those people who don't check over they monthly statements. A quick check on the Internet led me to a web site put up by an irate "customer." Their site had the exact same story as mine from 2 years ago, so this practice has been going on for a while. So be wise to Damark and to your monthly bills, as other companies have employed these same misguided tactics. With the holiday upon us stay sharp and be a wise consumer

Pete

Oh yes - the Radio Scanner Web Ring - a little bit of advice - don't try joining this one! The real name for it should be "Local frequency listings web ring" because if your site is all about scanners, but you don't have listings of local frequencies, the owner won't let you be in his webring...

On the other hand, Scanner Dweeb's web ring is good!

My BC-210 is displaying some really-unusual symptoms, and I'd sure appreciate some help.

The little button-size battery (Malory 10L123, Ray-O-Vac RW48, or Everyready 393) failed (it had been in there practically forever; corrosion on the contacts, etc.), and when I removed it, plugged the scanner back into AC power (but did NOT replace the battery--I didn't have one handy, don't want to waste the money if the scanner is truly broken, etc.), and (tried to) reprogram the scanner, its display started showing wierd and random frequencies. I can enter 162.475 (our local NOAA weather frequency), for example, and get 12.47 or many other numbers). However, I can HEAR the weather robot, so PART of the scanner is working.

If, while listening to the weather prediction, I press "lockout" and "scan", after a few seconds the scanner stops on the weather frequency again, just as if it had "forgotten" the lockout command. And the display may or may not show "162.475".

QUESTIONS:
* Is that little battery REQUIRED for normal operation?
* What is the voltage of that little battery--before I waste money on a new one which may not fix the problem, I'll cobble in a substitute.

You need to remember that many of the more recent viruses are "self replicating" IOW they trick the system they infect into sending out emails with the virus attached to it. The email you get with viruses attached that are easily traceable are usually this variety.

The SPAM mail you get is a different story and should be reported to the ISP of the sender if at all possible. It sometimes takes some work to dig through the headers but if you do there are a couple of good resources for tracing it back to the originator:

For domain names (*.com, *.net, *.org, *.edu) use:

http://www.networksolutions.com/cgi-bin/whois/whois

For IP addresses (xxx.xxx.xxx.xxx) use:

http://www.arin.net/whois/arinwhois.html

Typing the information in will lead you to an email address you can contact to report them. Of course there's always the delete button.

In the 10 years I worked with California Department of Justice/ Bureau of Narcotics Enforcement we served about 300 high risk warrents. twice we found scanners. The first scanner had a dead battery and was in a dresser drawer...The sceond scanner was programed to the local cop dispatch channel. It's just not an issue. Any scanner head in Ca knows the 6 DOJ freqs...and the fact that inversion is sometimes used. But the intel gathered during and investigation usally give a pretty good Idea what kind of "Counter" is possable.

Seems the only folk that were concerned about our traffic was the local media...

After a couple run ins with the press BNE decided to start being very open about the ops to the media and taking them on the raids. It was a win-win situation...until somebody at BNE screwed up bigtime on TV and Attorney General Dan Lundgren had to wipe some egg off his face.

Your local media has not figured out how to get 100% unrestricted access without The cops blessing yet? Sounds like the media is not real smart or really don't care...or just don't want to pay the price of admission to the Astro club. Or they just don't know the right people.

Fly us out to Florida...buy some radios...problem solved!

Mark J.

> Fortunately, Florida's "sunshine law" (open public records access) provides a

LOL....I'm sorry...it's just too funny...if your local media can do a five part undercover investigation into some sleazy subject but can't find a way to get an Astro programed then they must not want to listen that bad.

It's all about money...you got money...you got astro.

It's nice to see that you too are contering D. Stark's claims, but for
you to say "it's not an issue," I'm glad on behalf of all current BNE
personnel
that you're no longer working with them. That same reckless 'don't worry
about it'
attitude was displayed by the ATF supervisors just before they executed
a search
warrant at the Branch Davidian compound. SOMEONE must have disagreed
with you,
if the BNE had & occasionally used voice-inversion encryption, huh?

Riddle me this: How many raids weren't executed because the criminals
effectively
utilized scanners to evade detection & providing evidence to support a
search warrant?

> Seems the only folk that were concerned about our traffic was the local media...

Because they were overt about it, it seems to you like they were the only ones interested.

>>
>>TIA
>
Vol 1, Vol 2 and Cheek3 are all good books in my opinion. There is not anything wrong with Vol. 1.
Only that Vol. 1 was published before the release of the 2006. It has many mods for 2004 and 2005. Vol 2 is more specifically directed to the 2006.

However, you are right, if one is interested in the 2006 upgrades to the vol 1 mods, one would need to have vol 1 also.

Hi Nick,

The first thing to do is get rid of MS Outlook!! It's a horrible product that should never have been foisted upon the world.

The second thing to do is find better mail and news readers. Qualcomm has a free version of their Eudora mail app, and Forte has a free copy of Agent (newsreader). Both of these progs beat MS Lookout for functionality, ease of use, and security. You can also use Netscape for mail/news, but be sure to disable java in mail & news messages...also, if you can, find an older version (4.X will work nicely)...the latest version (6) is a big hunk o' poo.

The third thing to do is keep your virus sigs up to date, and scan any and all attachments you receive before looking at them. It doesn't matter whether it's from a total stranger, or from your best buddy (who may have inadvertently sent you an infected file)...scan them all.

Chances are, if you use Lookout, you probably also use MS Word. If you do, be sure to disable macros, otherwise an innocent looking document can take advantage of some security holes in the crappy program, and have Word do nasty things to/with your computer.

Regardless of what some tagnut down at Compusa may tell you, Microsoft is not your friend. They do not make computing more fun, nor do they make people more productive. They sell crappy, half-baked products that can often create more problems than they solve.

As for people getting their hands cut off for sending you a virus (and/or reporting them to an ISP), keep in mind that if you receive a virus these days, it's most likely been spread with Outlook. The person who sent it to you had no idea (s)he was doing so. Some simple lines of code the (s)he rec'd in an email had Outlook do it all on its own.

The *only* person to blame if your computer gets a virus is the person looking back at you from the mirror...

How do you 'disable macros' in MS Word? I can't find the option or
setting that does that. I have an option 'checked' that says to protect
against macro viruses but that's all I can find.

Jerry

Also in with regards to using MS Word it's a good idea to make your Normal template read only. Some viruses overwrite the Normal.dot file and use it to replicate themselves. Use the Find...Files command in Windows Explorer and find the normal.dot file and change the attributes to read only. If you want to change it down the road then you can change it back.

Thats pretty simple and has not changed in ages..the VHF channels are
154.920 for mobiles AND base stations....154.935 for mobile and hand helds
ONLY. The UHF CLEMARS is 460.025 (RPTR)... Eddie

That's the only one.

You can disable windows scripting host.

Rename C:\windows\wscript.exe
to something like wscript.disable.exe

There are few applications out there that take
advantage of windows scripting host. And the
majority of those are viruses.

I used to have a live realaudio feed, but it was heisted by Martin Gebhart and no matter how many emails I sent him, it stayed on his page. I finally made a short realaudio clip saying how he stole it from me without my permission. I just checked and it is now gone from his page. If you have a live feed, check this page and see if your audio was heisted from you:

http://www.gebhart-sbg.at/scanner/liveaudio.html

It pissed me off because he only links to your audio without linking to your page. That Rat Bastard deserves serious hate mail.

I may never put live audio on the net again.

The CHP does not have the capability of transmitting on the VHF
High-Band CLEMARs from the mobiles except for 4 Communications Command
Vehicles and the aircraft. All of the dispatch centers are equipped with
a base station on the VHF Highband CLEMARS 1 frequency. The CLEMARS 1
frequecy is programmed in all the VHF high-band portables. Only 20 of
the portables have the CLEMARS 2 frequency. The UHF is programmed in
their UHF portable with the exception of approx. 30 mobiles and some of
the communications centers are equipped with an UHF CLEMARS station.

All of the mobiles have low-band VHF CLEMARS but the Communications
Centers do not.

F/S Standard CCR-708A Spectrum Display Receiver / Scanner

Covers 50 through 905 MHz without gaps. Provides multimode operation and scanning. Visual display of radio spectrum above and below primary listening frequency to allow user to "pounce" on otherwise evasive signals. May be used as a part of a RF detection and countermeasures system, mobile or stationary. Very excellent condition with manual, antenna, and power supply. Universal Radio price originally over $700. I will carefully pack, double box, and provide shipping. Reasonable offer please (E-Mail please). Sorry, no trades.

Counter is fine...and I don't doubt that some savy folks are using scanners in some form of crime...
During the "Golden Dragon" dope landing in northern california in 1988 we saw the radio room of the vessel Pegesus...loadid with milail and conventional scanners. The mother ship came from Tialand...off loaded to the Pegesus and probably other smaller ships. The Pegesus anchored 1 mile off the Sant Cruz County North coast and off loaded 14 tons of pot on surfboards and inflatables. A farmer spotted the activity and notified the local cops. None if the 13 people arrested on the shore had a scanner tuned to the local cops. The pegesus was stopped 2 hours later off the San Mateo Coast.
A big money operation shut down by some stupidity and an alert farmer.

> > Out of

I won't bother with stats...I'm just gonna tell you like it really is in the field. too Many radios is right.

>

Sure it's a great tool. If you KNOW how to use it..
Truth is that most criminals have very little knowledge about investigate procedures to make a scanner worth the time and effort. The North Hollywood bank shootout suspects didn't even have a scanner. If a large scale investigation showed a possable link to a scanner before an arrest it's still no big deal cuz that's what wiretaps are for.

>
> 3. Working on law enforcement investigative operations where scanners
> were used to
> a varying degree of success in a criminal enterprise.

All fine and good...but prove a reduction in crime after a system goes encrypted or digital and maybe a statistical trend could be spotted. Fact: Most criminals are stupid and screwup in other ways to get bustwed. If the DEA in Norcal and Socal were so concerned, than 95% of radio traffic would not be in the clear. When Street level crack dealers are arrested with scanners and molded earpieces than maybe somebody will really become concerned.

Now that is in field factual experience...take it of leave it...but it's the facts.

How sad that on the Eve of Christmas you use this occasion to curse, call
names,
& attempt to start trouble in a public forum.

Perhaps a word to your ISP (Pacifier.com) would be appropriate regarding
your
actions.

Yes...you are correct ,casual monitoring will prove this point as you
have discovered.

It's of very little use to the common criminal. Thus it is not an issue for
law enforcement that actually deals in reality...Not paranoid fantasy of a
few police Chief or system admins.

> really would appreciate it.

Ignoring for the moment which are used by CHP, these are the CLEMARS
frequencies:

Gold 1 - 154.920 This is what's usually called CLEMARS on VHF -
Interagency comms
Gold 2 - 154.935 'CLEMARS Mobile' - Supposed to be used only by mobiles,
not base stations.
Gold 3 - 155.475 Better known as NALEMARS, a national interagency
frequency
- 154.905 CLEMARS Portable' - Supposed to be portable units
only - Input for CHP Extenders
Gold 4/5 - 460.025 One channel number for repeated, one for simplex on
output
Gold 6/7 - 39.460 Same as above, repeated and simplex
Gold 7 - 45.860 Alternate channel ID? Might be changed since 39.460
repeated CLEMARS activated
Gold 8/9 - 868.5125
Gold 22 - 484.2375 (Probably not really official CLEMARS, just interagency
with some LA T-Band user)

Who??? A robber taking 40 bucks from a 7-11....a murderer???
This is a complete stretch and you know it. I can't recall one single incident I have been on when a scanner was recovered after a pursuit or robbery of any type. I bet it has happend somewhere...but Tim you are reaching at straws if you think this is a genuine founded concern of most law enforcment agencys.

The military is a complete different story...apples and oranges.

I cite first hand experience...not some stupid stat or study...facts...just deal with it.

Well if you are sure it's from cable leakage you can just call the chief
Engineer at Cox and ask for those freqs. If they question why you want them just
tell them you suspect leakage and would like to confirm it yourself. If they
balk at the request just ask....
"Is this something I can ask the F.A.A. about"?
I bet they send a leak detector truck out real quick after you mention the FAA.

Source record: 73767

Is $65 a good price for a GRE Super Converter II? I'm thinking about getting it for my PRO-90 to listen to cells..... please no how it is illegal or anything :) we've all heard that enough here!

When you connect them, is it like, you take off the antenna, and the converter screws right to where the antenna normally goes, then you screw the antenna in on top of the converter, then all the 810-912 freqs are down 400mhz? Just dont want to get it and not be able to use it with my radio....

Also, exactly what frequencies are the cells on.. say I get the converter and hook it up.... what would I want to scan to pick up some calls?

Thx and merry christmas,

Is the Relm MS200 scanner totally out of production? Is warranty service still available on the unit?

Is there an on line spec sheet on the BC780XLT? Is the unit double or triple conversion and does it come with the programming software?

Well I could agree with that but you will also find that all the mods
are in his books and that they go into more detail than anything on the
net. You will also find that some of these mods are copyrighted and
have no business on the net.

Hi, I found a mod for my BC60xlt to modify it for 80 channels. Top make a long story short, I performed the mod but I still only have 30 channels. I bridged the two solder pads below the number 1 under the microprocessor (on back of the keypad board) with solder. The directions I had were from mods.uk. and were very breif. Can anyone lend me a helping hand with this? Thanks for the help.

I did the mod a while back using the same brief instructions. Just
dragged a blob of solder between the pads (I'm no expert at
soldering!). It worked fine, and functions like locking out,
priority, and such work with all of the new channels. You mentioned
that yours is a BC60xlt, mine is a BC60xlt-1 maybe there is a
difference?

Ok...your example has merit but occurrences are very rare. Arrest in these crimes are frequent but still scanners are virtually never found in the possession of the crooks.
"I ditched the scanner in the lake...and kept the gun officer".
It's just moot...there is no trend...no trend, no problem exist. That's how it works in the world of L.E., Enforcement is based on trends. So you used a scanner to commit some petty crimes. Show me a trend, 'cuz us folks on the front lines don't see what you think you see.

> > The military is a complete different story...apples and oranges.

> be assuming I don't have "first hand experience," you don't seem to
> understand that law enforcement is a paramilitary operation, and...

You never cited any first hand data except for some school pranks....cite and release stuff.

...and the cops are not the military. The local cops don't have the military's budget either. DEA has a large budget....95% in the clear....border patrol...in the clear.

Please address why the federal government thinks it's ok to broadcast to the public the locations of tails...smugglers...and other various investigations? If the feds were being burned all the time in San Diego (border city) they would have a great argument to increase funding of new radios and better encryption systems. Since nobody is running to Capitol hill screaming about scanners there must not be much of a problem. CTIA runs to the hill about scanners but the FBI/DEA/SS/ATF/IRS ect. are silent on the issue...why is that Tim?
Ya want a resume ....
1997 Joint Fugitive Task Force Washington DC 12 high risk warrants served in 3 days ...California Bureau of Narcotics Enforcement 200 plus High risk warrants and investigations from 1990 to 1996...New York City Police Department...8 warrants in 5 days. Dallas Texas 4 warrants in 12 hours 1998. Geeze Tim...I go through the door...I see all the property booked as evidence on every single case I'm on . Operation Tri Star 1996....you remember Tristar...San Francisco PD Gangs Task Force...Santa Cruz County Sheriffs Office ...20 warrants. Seattle PD 6 warrents...Vancouver WA. PD 10 warrants.....all that just between 1990 and 1999. Now I'm assigned to Southern California where still no problem is sighted. I have been in the same profession on the street and front lines for 25 years.....BFD right....still NO TREND.
All I see is someone who thinks there is some problem and wants to debate till the cows come home. I'm telling you fact...you have presented no facts...just opinion. I gave you detailed experiences...I still do the same job just a different city and still have not spotted a trend. And short of somebody else popping up here to defend your stance I see nothing in you argument that points to a problem.

Show me the problem.

Mark J.

So you can't read, either. I say that out of hundreds of thousands of arrests every year (the number of arrests made by police is contained in the aforementioned UCR - at least the ones that local police report voluntarily to the FBI), there are only two or three tops that might involve scanners. Markj pops up and says that he made about 300 warrant arrests and found two scanners (and that neither one was capable of being used to assist any criminal enterprise). Where exactly does his posting "counter" what I said?

If you want to argue with experts (one police officer and one criminal justice doctoral student) then you'd better acquaint yourself with some honest-to-goodness FACTS about the subject. I haven't heard anything more than weekend warrior conjecture.

Some folks thought Bill was an asshole...
Others thought he was a very smart man when it came to scanning...

Macky is just an asshole who has not made a single contribution to the scanning world...thats just fact.

I disagreed with Bill dating back to his CB days in Spring Valley(1985/86)...but he had my respect when it came to the 2000 series radios.

So what has John published...who has John helped??????????
Show us just how smart you are John.

You're the *real* butthead....?? :-)

The diskriminator itself is an electronic circuit nowadays in a single integrated circuit wich extracts the audio from a frequency-modulated (fm) signal. This ciruit is basically needed in *every* FM-receiver.

The output of this circuit is now *directly* brought to an additional output, when the signal otherwise is bandpass fitered and and given to gain stages and then to the speaker -and sounding much different from the original signal. The "pure raw FM signal" is needed to decode audio-signals with very low frequencys (sub-audio-tones) as for example CTCSS or pager signals have them or other digital transmissions in FM-mode like high speed packet radio.
The *discriminator* output signal normally feeds an external device (as for example an computer with soundcard) for beeing decoded.

I'm sorry but your statement is incorrect. Damark sells both new and refurbished items. It is up the customer to read the item description to determine which they are considering to buy. Usually, Damark sets the items that are refurbished in a yellow background.

4860. Pennsylvania [Emergency] Situation Report e-mail list

Newsgroup: rec.radio.scanner
Date: 2000-12-26 15:12:58 UTC
From: PA-Sit-Rep <PA_Sit_Rep@yahoo.com>
Message-ID: <92achmejk1@nnrp1.deja.com>
Source record: 73707
Cross-posted to: rec.radio.scanner,alt.radio.scanner

The purpose of PA-Sit-Rep is to keep
all of our e-mail list subscribers
up to date on emergency situations
and activities of MAJOR import
throughout the state of Pennsylvania.

PA-Sit-Rep is a free communications
tool that will enable subscribers
to monitor situations throughout the
State of Pennsylvania including major
weather emergencies, natural disasters,
environmental disasters, police and
military activities (major emergency
events and exercises only), civil
disturbances and political developments
ONLY OF THE MOST MAJOR IMPORT).

List members are encouraged (but not
required) to send reports to the
list pertaining to any of the above
activities.

The PA-Sit-Rep list is extremely low
volume because posts are limited to
messages pertaining to Pennsylvania
emergency situations only of the most
major import.

List membership consists entirely of
voluntary participants. The more
subscribers we have, the more effective
the list becomes. Please join today
and spread the word!

For more information or to subscribe,
please visit the PA-Sit-Rep web page:
http://www.1stpa-militia.org/sit-rep.htm

Or you may subscribe by sending an e-mail
to: pa_sit_rep@yahoo.com

Put the word "Subscribe" in the subject
line and the e-mail address you would
like to have subscribed in the message
body.

4862. Newbie With A PRO-2050

Newsgroup: rec.radio.scanner
Date: 2000-12-26 16:51:30 UTC
From: Hutchinson-Pritchard <lpptjh@cajunnet.com>
Message-ID: <92aibj$7lt$1@news.datasync.com>
Source record: 73710

Hi everyone,

I am a new guy on the block from the New Orleans, LA area. I have recently discovered the hobby of shortwave listening and have had a great time with it. Since I really enjoy radio monitoring, I recieved a new holiday gift from a loved one: a RS PRO-2050 scanner.

The last scanner that I had (years ago) was one of the first frequency synthesized RShack models, which allowed one to monitor 20 freqs at a time. I didn't realize how far the technology had come! Boy was I blown away when I saw the capabilities of the PRO-2050!

I have read the manual and believe that I understand the basic concept of trunk tracking, how to use the radio, etc. It will take awhile to learn the fine points, though!

This appears to be a really fine and advanced unit. Can anyone give me their opinion on the PRO-2050, or share some tips or experiences? I already know I need to get it connected to an external antenna. Any suggestions there? I would appreciate any input anyone would like to offer. Thanks!

well, most ISP's have an abuse department. For example, at the ISP i work for, if someone gets spam, viruses, or even if they are being attatcked by someone else on the internet, they can send a message to abuse@ptd.net (ptd.net being the ISP i work for) with as much information about where the abuse is coming from, whats happening, or any other information that you have. Other ISP's "should" have similar services, usually the address would be abuse@(insert that ISP's domain here) like abuse@epix.net or abuse@aol.com. If you cant get through to an abuse address try something like postmaster@whatver.com that should get you to the mail administrator at that ISP and they should be able to get you to the right person.

Good Luck!

From: aka askme <aaxxcro@hotmail.com>
Message-ID: <92at2e$bd9e$1@as121.tel.hr>
Source record: 73721

Hi ! i am kind of new here, but i know something about scanners, because i have one old analog Jupiter scanner up to 1.3 GHz (no gaps), and now I would like to buy new one to track and to listen to cellular phones, but especialy to read SMS ! i know that this is possible , but i dont know much more ! if anybody could help me ?! to find some url or some files or more maybe
on what to buy ?!
what software to use and how ?!
i thuink i know freq of cellular phones in my area but i would like to learn more, and to maybe modifie my scanner new one or maybe old one to make it work ?!

all the best
thanks
and 73

Just by way of information here. The R-2 sells for $175 brand new. The software for $36 and the ant. for $20. Thats $231 for all brand new with a yr warranty. Buying yours, I get NO warranty since Icom won't transfer warrantys to new owners. Thats why top price for used gear is about 70 to 75% of new or in this case about $270 tops. Just for your info as to why it may not be selling.

I downloaded the latest software release ver 3.30 from Winradio. After installing this new release I have had a brand new problem crop up. When you tune the receiver past any band edge with the manual up-dn arrow buttons the receiver jumps to 1600 Mhz! I have a 1500i which will only go to 1500 Mhz...

I have tried uninstalling the new version and putting my old 2.19 back on, but this crashes the PC when you try to open the Winradio software, and a reboot is necessary to correct the problem. Looks like it's time to format and reload everything.. Man I hate that!

Anyone have any idea's? If you are running this new version try tuning to 500 Khz and hit either the up or down arrow next to the frequency display...

If this is the simple interface using an IC to shift the levels then you may want to look here:

http://home.att.net/~k7szl/

It is usuallly referred to as the Hamcomm interface.

Also if you did not know you will need to hook the interface to the baseband audio most often referred to as a discriminator output.

All,

I have an old Realistic Pro-41 handheld scanner (with charger) that I will give away to any volunteer firefighter or volunteer rescue squad/EMS member who is willing to pay $10 for shipping expenses and provide proof of their volunteer membership.
The radio is a 10-channel programmable, VHF-Lo, Hi & UHF only. It works well and would be perfect for someone who only needs limited monitoring capability.
The first person who responds by e-mail and is willing to meet the above conditions gets the radio.

4902. REALISTIC PRO-2021

Newsgroup: rec.radio.scanner
Date: 2000-12-27 01:36:33 UTC
From: sam <welson@admin.umass.edu>
Message-ID: <3a498246@oit.umass.edu>
Source record: 73663

I have a Realistic PRO-2021. I seem to recall something "special" that I read about it a few years back but I can't remember what or even if it was something good or something bad. My poor recollection is either that it didn't do something that it should be able to do or, conversely, that it did something that other scaners in its class could not do.

I only use about fifteen of the two hundred available frequencies so I'm hardly an enthusiast and will likely have no practical use for the info, however I am curious if anyone can help.

4904. Massachusetts "10" codes

Newsgroup: rec.radio.scanner
Date: 2000-12-27 01:44:58 UTC
From: sam <welson@admin.umass.edu>
Message-ID: <3a49843f$1@oit.umass.edu>
Source record: 73664

Can anyone help out with how I can get the "ten codes" that are used by the local police in Northampton, Massachusetts?

I asked this question on this group about a week ago (BACK, BACK, all self-proclaimed web cops - please hold the zillion posts that are typically made telling me I'm clogging the nets bandwidth and might ruin mankind as we know it!) and received just one lead, a link to http://users.javanet.com/~kberrien/.

It's a well organized and interesting site for the Western Massachusetts area, however the ten codes listed don't seem to jive with the codes I hear broadcast. This is typical of ALL of the ten codes I've found out there on the web. Am I doing something wrong? Do I need a decoder for the code? What's the deal?

4905. Serial Nos. of the improved DJ-X10 units

Newsgroup: rec.radio.scanner
Date: 2000-12-27 01:51:49 UTC
From: Jim Keeling <insgeeks@mindspring.com>
Message-ID: <92bhqe$s36$1@slb3.atl.mindspring.net>
Source record: 73650
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,alt.radio.scanner

My understanding is that Alinco made some improvements to the X10 unit back in late 1998. I believe the improvements centered around image problems in the VHF-lo bands and selectivity/sensitivity issues in the HF bands. My question is does anyone know the approximate starting serial number range of the units that would have these improvements?

I can not seem to find this info anywhere. I called Alinco and they claim no improvements or corrections of any sort were ever made to this scanner.

Jim K.

Dave,

That's exactly correct. Very easy to determine what sections
of their catalog is advertising refurbished items with their
color coding. It also usually states the condition in the
item description. Never found them to be misleading or
confusing.

I bought a 1500 Watt (continuous) inverter from Damark a decade
ago for $399 when everyone else charged more than double the
price. It was new with a full factory warranty. Found a few other
bargains with them over the years.

Sometimes they have great deals, sometimes not. Just have
to be a smart shopper...

Robert

4909. Audio Geek needs Scanner help

Newsgroup: rec.radio.scanner
Date: 2000-12-27 03:22:47 UTC
From: Jim Secrest <e015@lehigh.edu>
Message-ID: <3A496087.ADF21C56@lehigh.edu>
Source record: 73654

Hi folks -
I'm a sound person who goes out on shoots (mostly single camera Beta shoots).
I would like a full coverage HH scanner, that can pick up wireless mic freq.'s,
(wireless mic freq.'s that I use are usually TV block channels 20, 21, 22's) altho I travel quite a bit - I would need the possibility of receiving other freq.'s, SAP for TV stations (sometimes the production crew at the station will send their "direction" to the talent via SAP), really cheap wireless mics use 800-900 freq.'s, I guess cellular would be nice - as some TV stations use the cell fone for "direction" to the talent here as well -(IFB) - It's good to hear the station tell the "talent" to point at something away from the microphone - I can reposition my boom pole or at least be aware that the "talent" is going to walk "out of frame" again...LOL

I also do some sports audio & would like to pick up the ref's mic for reference -
while I have permission to use the ref's mic - I'm kinda tired of rummaging under &
behind the PA system of "the stadium" and trying to convert their mini plug/1/4"
output - isolate it from ground & convert it to xlr balanced for the "remote truck"
only to find out that the whole cheesy operation now creates a "buzz" in the audio of the stadium. A scanner would be "ground isolated" - the mini plug (earphone) output
(8 ohm - 150 ohm) is something I'll contend with.

Of course, the scanner would have to be capable of Wide Band FM & Narrow FM, AM (I guess "Air" would come in handy as well?).

To get cellular - would I have to buy my "radio" in Canada??? How is that done??

I have done some looking - the Yeasu VX-5r is the only one I've found that does do most of the above - However, that is a xmitter - I'm studying for my amateur license so that should help.

U guys are professionals at what U do - so can U give me some insight to make my life easier?

Thanks,
Jim

DEFENSIVE GAINESVILLE REGIONAL UTILITIES DESPERATELY STRETCHES FLORIDA LAW

Skip Manasco of Gainesville has apparently slapped together a defensive and decidedly bizarre interpretation of Florida's anti-scanner laws intended to keep them out of moving automobiles to keep them out of the public, period. So reads this article out of Gainesville that seems to portray a radio board entrenching itself against potential state inquiry into its decision to block citizens from listening in on taxpayer-funded public communications. Despite Manasco's "Joe Blow" interpretation of the law, the trend in many police departments is toward openness, not isolation. In reading the article, it appears that Manasco tries to slip by the "scanner-in-automobile" laws as a general law in some attempt to gain public acceptance of a potentially controversial decision. However, this is a highly unique interpretation and one that jeopardizes the safety of Gainesville citizens and public safety.

http://www.sunone.com/articles/2000-12-26f.shtml

WAKERFIELD POLICE POST FREQUENCY AT WEBSITE

It is interesting to note that the Wakerfield Police Department of Massachusetts where seven people were recently killed in a mass shooting posts its primary scanner frequency on its main web page. There is no telling how this simple positive philosophy of openness may have contributed to the saving of lives during this tragic event - you'd have to get into every individual account of the story to know for sure. However, whether anyone benefited or not in this particular tragedy, it is still an excellent attitude by Wakerfield police.

I posted the request a couple of weeks ago (I have the same one) but got no reply.

If you get any response let me know. A little info to help you out:

-check out the Realistic PRO 2026 at their web site, it is so similar it is scary.
http://support.tandy.com/support_electronics/8438.htm
If you think the resemblance here is scary check this picture out:
http://scanpix1.home.att.net/RS/pro2026.jpg

-this scanner takes a tone board. If after you program in a frequency you see a flashing "CTCSS" in the bottom right hand corner of the screen, the tone board is installed already.

-you have the same frequency bands as listed for the Realistic 2026, including the 800 - 956 MHz, less the cell frequencies. However, I have had little luck in this range compared with a PRO 2046 I tried, I don't know why.

-channel 1 is your priority channel. Push the PRI button while the scanner is scanning ("PRI" appears in the lower left of the screen) to enable. The Scanner will now check channel 1 every two seconds for activity, even while you are listening to something on another channel. If channel 1 becomes active it will switch to it.
This can get annoying if you a listening to a long event on another frequency because the scanner mutes the audio very briefly while it is checking channel 1. If this happens, you can hit PRI again to disable priority scanning while you listen and then switch it back on when you are done.

-to program a frequency into a channel
1 push MANUAL and the channel number (i.e. 1, 5)
2 push MANUAL
3 enter the frequency don't forget the decimal place.
4 push "E" for enter
5 if "CTCSS" begins to flash in the lower right hand corner (see above) enter the PL tone if you know it, if it does not flash, or there is no PL tone, press MANUAL.

- you turn banks on and off the same way you do on most Uniden scanners, just push the key in the numeric keypad the has the bank number on it while the radio is scanning. If the bank is currently enabled, this turns it off, if it is currently disabled, this turns it on.

I'll have to look up the search feature and how to use it, I got that from another manual but I rarely use it so I don't have it memorised. email me if you are interested.

Check out the Radio shack magnetic mount "scanner/HAM" antenna if you don't have one, it is fairly cheap and works OK (not great). I got it so I would have an antenna for the car too. If you do get it, there is a MOD available for the antenna to centre it better to the frequencies that you scan as opposed to the HAM frequencies which apparently is what it works best at unmodified.

This is a great little scanner, works well as a base and mobile unit. I can't complain, mine was not free, but at $5.00 Canadian with the tone board (garage sale buy) it was close enough. If you really get interested in scanning (I am hooked now), you will probably end up with a newer model with a few more features, but I doubt that you will tire of this one fast, unless you are in an area with a lot of trunked and/or digital service usage. I am lucky in that the worst thing I have to deal with in my area is PL tones, and the 590 XLT does that.

As I write this I am listening to the local police, tracking to car thieves. (HINT if you are going to steal a car in winter, don't try to make your getaway on foot after a fresh snowfall in the middle of the night LOL)

Gotta love it!

UH OH the Dogs arrived . . .

BTW

thanks to all the people that replied to this request with info and
frequencies!

At this rate he will need a new scanner just to enter all the frequencies
that I was sent. He spent two hours listening to service dispatch calls from
the local PD, Fire, and ambulance service here in Kingston Ontario. I had
programmed them in for him. Boy it was busy for Christmas Day!

We even picked up a few 900 MHz cordless and cell phones (reflections on the
cells I guess since it is a cell blocked scanner). I think he will really
get some enjoyment out of this.

****
Your question is easy for me to answer, as I own the PCR-100, Optocom, &
Winradio 3150e, the latter traded up from the Winradio 1500e.

Since your main interest is likely monitoring the trunked systems, the Optocom
with Scanstar Deluxe software wins hands down. I have not tried the other
radios with trunked systems as their performance with conventional systems is
inferior to the Opticom. Rather, I reserve them for less demanding or
specialized applications.

I am presently vacationing in the Tampa FL area, and am running the OCom on a
Compaq p166 laptop, simultaneously monitoring the following:

Hillsborough County (2 Edacs PS systems)
Clearwater (Edacs)
St Petersburg (Mot Type II)
Pinellas County (Mot Type II)
Tampa PD (conventional)
Tampa FD (conventional)
Temple Terrace PD (conventional)
Hillsborough County (conventional)

Scanstar Deluxe handles these approx 140 channels with ease. A faster computer
would do even better!

I can also use Scanstar with the PCR-100, which I do at home for consistency.
The supplied Icom software works slightly better, especially with CTCSS, but is
very cumbersome to use compared to Scanstar.

I have used the OCom mobile from the laptop, but this really needs a driver and
a passenger to run the computer if frequency changes must be made while driving
- safety. This radio does have good audio in a mobile environment.

I have not tried, and don't expect, the PCR-100 to be at all suitable for
trunking, as the scan speed can be very slow. I don't have trunked systems at
home to try this out with, though, so I might be off the mark on this one.

The Winradio is in a class by itself. This radio, despite the ads, represents the least functionality/dollar spent, of any scanner I have ever owned! The available software and the versatility of the special functions of this software (all from WinRadio, most of it free) make me fond of it for special projects and tests, but I can't take it seriously as a well-performing radio.

The dynamic range allow it to be easily overloaded by strong unwanted signals - an external FM bandstop filter is a necessity at all times. Sensitivity can be very poor and multiple spurious responses all over the place limit its usefulness. Some functions only work if the audio is fed to a computer soundcard, and there is only limited audio available. The only software that supports Trunking that I know of comes from WinRadio (at a price), and only supports Motorola.

I do not consider this any sort of a general-purpose receiver, but might be OK for some folks who are inexperienced.

Comparing any of the others above with the OCom is not a realistic test - they are far behind it! The OCom is sensitive, stable, free of annoying spurs and birdies, and has more than enough good-quality crip audio with the internal speaker. At this stage, my next radio will be another Opticom to make a pair for slaved scanning, which Scanstar supports.

Aside from this question, other units in use are a BC-890, AOR8000, WJ-HF1000, DR-22, and a DR-33.

Let me know if I can help further.

Arthur

> own banks?

Well, whoever told you what you "know" is wrong, for starters. A "Hybrid"
system is only one system. Type IIi means that the entire system is broken
into fleets and subfleets (and therefore requires a fleetmap) just like a
Type I system. Some of the individual radios in the system are Type II
radios, and there can be both Type I and Type II radios operating in the
same subfleet.

A Hybrid system also requires a fleetmap, but some of the blocks are "size
0" which means that they are all-TypeII.

I would just like to take a moment to thank those people, behalf of my 14 year old son that allowed me to use for the first time parental controls. He recently became interested in radio electronics and has been surfing the net and reading news groups on scanning and ham radio. There's nothing better than knowing that your child can access some of the greatest information via the net and also read posts from people F.Uing each other.
A simple "crap" here, a "piss" there, a "screw" this, a "screw" that, we most all use. But to out right, and blatantly use vulgar obscene language back and forth to each other in a PUBLIC forum is a sign of a bored mind (among other things). Especially for the fact that forum is accessible to children. Besides, wouldn't it be more personal doing it by EMAIL? Or better yet, meet somewhere private, throwing off the gloves and going at it? Oh yeah, that would require removing yourselves from the chair and from behind the safety of the keyboard.

It's a bit dicey. Congress banned the feature on all scanner models manufactured on or after June 15, 1997 and prohibited the sale, distribution, use, or possession of all aftermarket modification and retrofit kits to re-enable it.

Subsequently, the Citizens Political Correctness Coordinating Committee lobbied Congress extensively. Congress then passed the 1999 Radio Communications Non-Discrimination Act which makes it both a civil rights violation and a "B" misdemeanor to activate the circuitry on any pre-ban scanner or to "listen by either headphone or speaker to broadcasts on any such scanner radio even if the circuit was activated by another person or entity- including a computer program".

So better I don't tell you how to do it ;-)

4939. Hows your setup?

Newsgroup: rec.radio.scanner
Date: 2000-12-27 16:03:50 UTC
From: Larry <Xlarrymorin@home.comX>
Message-ID: <Gpo26.75626$w35.13004081@news1.rdc1.nj.home.com>
Source record: 73686

Hello everyone,

I have a few questions that I would like to ask. It is my hope that it will spark some of the lurkers (myself included) to come out and join the folks that post regularly. I am on no less than 20 scanner mailing lists with a combined total of over 4000 members.. I have been on most of the lists for quite a some time, while others I just recently joined. For those of you on multiple lists, my apologies for the cross posting, however I would like to get as much input as possible, as we may find that someone out there has a better or more efficient way of doing something that will help us out.

I am not aware of the following questions (or answers) being posted to any of the lists or on any websites.

1. How is your scanner/s set up?

I use 2 scanners regularly. A pro 2035 with 10 banks that I have set up with one department for banks 1 - 4.
bank 1 police
bank 2 fire
bank 3 medical
bank 4 utilities (electric,gas,water companies)

I use banks 8-10 for the frequencies of the towns surrounding my area, including DPW, schools and local freqs.

The remaining banks I use to program in various frequencies found in books and the web in search of active frequencies.

The second scanner I use is a Pro 91 that I program depending on where I am working that day, or with the most active department for a major incident. i.e. the Fire Dept for a large fire, so that I can use the other scanner to monitor the other agencies, and surrounding towns.

2. How do you keep track of your frequencies? Do you use a spreadsheet application (Excel), have you created your own database, or is there another program available that you use?

I currently us Excel myself to keep track of the frequencies that I have programmed into my scanners (also marking which frequencies are active), however I am in the process of creating an MS Access database that will allow me to better manage the information that I gather, as well as match it up with the codes that the various agencies use in my area.

I have other questions to follow, waiting for some feedback on these two questions before posting them.

Thank you

Larry

Hi Larry,
I'm also in New Jersey, specifically Hudson County.
1. I have several scanners that I use, plus an Icom R-8500 on the way. For police in the towns surrounding mine, I use an 80ch PRO-2044. All of the departments are on VHF or UHF, so this scanner works fine for this application. I have a Uniden BC-210XLT scanning the fire departments in those same towns. I have a 10ch PRO-2033 dedicated to monitoring the police in my town, and an ancient Bearcat 210 for my local fire department.
I have a BC-890XLT scanning the NJ State Police, and I occasionally use it to monitor railroad and aircraft.(A trunk-tracking scanner is next on my list.) My 400ch PRO-2006 is set up to monitor any of the public safety frequencies the 210XLT and PRO-2044 cover, but I mainly use it to search out new frequencies, and to monitor marine, EMS, amateur radio, FRS/GMRS, NYC police and fire, and other radio services. An old Bearcat 250 scans intinerant business frequencies and public utilities. When the Icom R-8500 arrives(hopefully today), I will determine it's purpose. :)

2. As for organizing my frequencies, I still maintain written lists, even though I am very computer literate. (I'm the Admin for the Novell Network in my office!) I plan to start using Excel for this purpose shortly.

I hope this helps. Since you're in NJ, let me know if you come across any interesting frequencies, and I'll do the same.

Craig

> The web site address where I get my info from is
> http://www.trunkedradio.net/. Click on Texas, then click on San
> Antonio/Bexar County.

OK, did that.

The site does not say that Bexar County is changing over to Type IIi. It says that they will be changing to EDACS over the next several months. EDACS is a Commnet/Ericsson/GE system that is totally incompatible with the various Motorola types being used now.

Clicking on the San Antonio/Bexar County link brings up a page that lists several different systems, not one big system with several formats. Additionally, one of the listings indicates an incorrect Type description:

>San Antonio Central Public Safety System
>Callsign: WNGU984
>System: Motorola Type IIi
>Location: Top of the Tower of Americas Downtown San Antonio
>wattage: 140 ERP
>Fleet Map: S-13,S-12,S-0,S-0

With Blocks 6 and 7 being size 0, this is a Hybrid system, not a Type IIi.

Type IIi is a Type I system that uses some Type II radios, not a system with both Type I and Type II blocks.

The other listings of "Type I" systems might be correct, but the only way to tell is to monitor them with Trunker and see what the individual radio IDs look like.

Source record: 73696

I have two scanners a radio shack pro-2052 and a bearcat 895xlt. I use the bearcat as my trunking scanner, bank1 for san Diego City trunking, bank 2 for san diego county trunking. I use my radio shack pro 2052 as my conventional scanner seeing that there are more conventional freqs than trunking.

As far as freqs are concerned I put all the freqs that were of interest to me in an excel spreadsheet. Seeing my pro-2052 could handle 1000 programmed freqs, I programmed all the frqs in, and made alist of those that were active. I then made another column on my spreadsheet for type i.e., emergency, military, federal,space station and shuttle, misc. I then programmed all emergency on bank1, fed on bank 2, military bank 3 and so on. On my spreadsheet I did a fill color of gray on those freqs that I had hits on , then I did a cut and paste to another worksheet with just the active freqs, and keep the non-active list for any new ones that pop up when I do a search.

For my bearcat I got the latest version of winscan for identifying and logging the talk groups associated with trunking in my area. I made a list of the talk groups associated with that bank in an excel spreadsheet and put the talk groups in numerical order for easier reference.

Hope this helps,

jestahley3@home.com

In general, yes. The exception might be a SmartZone system that uses the same fleetmaps or user lists on every site. If you are using a BC-245, PRO-92, or the similar base models, you can theoretically program several identically configured systems into the same channel banks and they could use a common fleetmap (if needed) and common talkgroup list.

With the San Antonio listing, it does not appear that the systems in use there are closely enough related to each other to make such an arrangement work properly. In that case, you will need to separate the trunked systems into different banks.

Clear as mud? :-)

4968. UC Air Care Frequency

Newsgroup: rec.radio.scanner
Date: 2000-12-28 00:13:55 UTC
From: "Craig R. Hauke" <medic3@bright.net>
Message-ID: <xAv26.9708$aO1.706993@cletus.bright.net>
Source record: 73617

Does anyone know if U.C. Air Care out of Cincinnati has changed their
frequency? I usually hear them on
462-975, but I do not hear them anymore!

What kind of trouble do you speak of? I will probably get NiCd or NiMh anyway
but I'm just curious.

If you really need a keypad- or any other part for your 2006.
Go to www.radioshack.com - enter pro-2006 in the search box,
then scroll down to "detailed parts list".
You will find all parts, plus an 800 number to order by phone, or you
can go to any Radio Shack store to order.

Almost all batteries are rechargeable to some extent. In some the
chemistry is far more easily reversed and more completely reversed
than others. The ones where the chemistry is best behaved are called
(no surprise) rechargeable.
>
>If so:
>Is it safe to do this?
Within limits. It is very important to limit the charge rate. Higher
charge rates break down the electrolyte, and the gas formation could
cause leakage. The electrolyte in Alkalines is Potassium Hydroxide,
which is pretty corrosive. That the reason the no-leak guarantee is
void if you recharge.
>How many times can this be done?
Until the capacity is so low that it isn't worth using.
>

FWIW, I used to plug my PRO-34 in to the charge jack with alkalines before I bought nicads. They were good for about a month of heavy usage. Since I bought my PRO-90, I have to charge my PRO-34 about once a month. My county uses a Type II system and my PRO-90 is the greatest thing since sliced bread!

The PRO-34 has better VHF-LO and VHF-HI then the PRO-90. I have one system in my PRO-90, all 20 channels. The other 280 are blank! They should have made the scan lists 10 banks of 5, not 5 banks of 10. I may program another bank with the same system for the other side of the county.

I don't even use my PRO-2026 anymore. If anybody wants to buy it:
http://www.abs.net/~the420
It is the old version, presently unconverted. In box with manual.

I heard warnings regarding the danger of explosion. I dunno? My main concern is battery acid. It isn't worth it to me if one day I pop the case open when the batteries are really dead and find a nice corrosive goop has permeated my many hundreds of dollars of radio and is currently corroding everything in its path. IOW my expensive scanner is worthy of a few bucks spent on the right battery. Just my thoughts Steve.

Source record: 73637

For those of you with HF receive capability, I just received this notice
that may be of interest to those who have insomnia:

The FCC has requested that Amateur Radio operators in and around Texas
voluntarily relinquish the use of 3870 to 3878 kHz to enable the
handling of emergency traffic. Texas and Arkansas are among states hit
by ice storms that have disrupted power and communication and made for
hazardous travel conditions. Amateur Radio operators have established
nets to handle emergency traffic during the weather related outages.
Leroy Pittman of the FCC last evening asked the amateur community to
cooperate in recognizing the existence of a voluntary communications
emergency and to stay clear of the 75 meter frequencies at the request
of ARRL South Texas Section Manager Ray Taylor, N5NAV. Taylor reports
that Amateur Radio operators already have helped with hospital
communications after hospital telephones were knocked out.
Taylor requested a voluntary communications emergency from the FCC
because the nighttime Emergency and Tactical Traffic Net frequency of
3873 kHz has been subjected to what's believed to be intentional QRM. A
net on 7285 kHz has been handling much of the winter storm related
traffic during daylight hours. A copy of Pittman's request to
voluntarily relinquish use of the specified 75 meter frequencies has
been sent to the FCC's HF Direction Finding facility in Columbia,
Maryland. Roads in the Texas panhandle were reported closed in the wake
of heavy snow. Elsewhere, highways have been covered by ice. An ice
storm warning remains in effect for Arkansas and Oklahoma.

It may only need a cleaning between the keypad and contacts. My cordless phone had that same problem so I took it apart before sending it in, cleaned it up, and it has been working fine for the past 2 years with minimal work and zero expense. It had been exhibiting problems with the keypad that made me believe something needed replacing - go figure.
~Steve~

Mark - Even if his kid has heard foul words before, why should he be able to pick it up on a radio hobby related newsgroup such as this one?

Many of us here wish the rest would model behavior that would reflect positively
on the hobby. The unacceptable behavior is what did in old what's his name (RIP)
on this NG & in the hobby.

Trevor,
While that is certainly a fine idea for some, it just isn't feasible for the vast majority. For instance, the elderly blind woman mentioned in the article, is she going to be able to get a ham ticket, or participate in the neighborhood watch? Why should she have to? I've have helped several local nursing home residents set up their scanners with the local frequencies of interest, they don't want to be hams or spot bad guys, they are looking for something to help fill the hours of their days. Listening to a scanner is certainly more mentally stimulating than parking in front of the boob tube for hours on end. The media and/or alarm contractor angle just won't work, either, as I'm sure the authorizing agency will want some sort of credentials before programming that $4,000 radio they have to buy.

Lets face it, digital audio is not the same as encrypted. The government should allow the development and marketing of digital scanners, and require ENCRYPTION of sensitive traffic. Just think, this argument could have come up back in the late 40's or early 50's, when police radios went from AM short-wave frequencies to FM VHF. Just think of it: "The public doesn't need to hear FM, the police need their security." Where would we be now?

A government that operates in secrecy becomes a secret government!
I believe that the basic radio transmissions should stay in the clear and
only priority traffic should be encrypted.
What will it hurt if the public hears the basic traffic stop, fire call,
drunk driving stop or ambulance call. Now when there is a minor involved or
a serious crime with important (vital) information that the public doesn't
need to hear, yes, encrypt it (drug bust to). I feel that our government
tries to hide to much stuff from us anyways! The next thing you'll see is
McDonalds encrypting the drive thru head sets. What the hell do these people
fear of us hearing? I can tell you! My local police uses simple voice
inversion which is easy to decode. I know for a fact that they switch over
to tell jokes, cut up and talk about things that they would get in trouble

telling in the clear. Imagine if they knew for a fact that people like me could not hear them. Man I could tell you some stories (but I won't).

Just because the technology is out of your current financial reach you think
the police are being secretive?
It's a very simple concept...If you have the desire to listen to digital
transmissions than you will find a way to do it. Whine and bitch all you want
about the changes...or take action and get yourself a radio and learn how to use
it.

Get a radio and learn how to use it??
Like I can just run out and buy a digital capable scanner!
If I could, who says its out of my financial reach? Do you have any idea of
my income? No!
When the scanner technology catches up with the government, then I will have

one. The way I see it is that
they won't allow manufactures to make scanners capable of receiving the format the government uses. I sure hope they do but not likely. BTW, I'm not bitching, I'm stating the facts. The police will become a secret police and we will not be able to listen to them at all. I bet Mark J. is a public servant???? Hopefully not a police officer who risk his life every day for a measly $25k a year and benefits. These Damn 60 million dollar Motorola radio systems need to be cut out! Start paying our boys in blue some real money for putting their lives on the line. I think the money could go to better use buying better vest, better training, better pay and better weapons to protect themselves against the real criminals with automatic weapons and crack pipes.

NOT.... Scanstar software is terrible !
must be written by some one that dreams up government forms.

>> >I do not consider this any sort of a > general-purpose receiver,(the
Winradio) > but might
> be OK for some folks who are
> inexperienced.

I find the Winradio (WR 3150i) to be a very well made and useful piece of
equipment.
Just because its easier to use than some of the others just means it was better
thought out and doesn't have to be user
un-friendly. It rivals my Yaesu FT767GX
in reception on the shortwave bands (attached to the same antenna).

I also have an OPTOCOM and find that, even though its a nice receiver, MOST of
the software written for it is hard to use, and does not work in its native
mode.
(yes... you can set the software for the
OS535 and the receiver will work), but more software should be written for the
OPTOCOM mode and written professionally in assembly, not VB.
Don't get me wrong.... I think the optocom
is a nice radio... and has LOTS of potential. I highly recommend it over most
of the "off the shelf" junk.

Of the 40+ receivers that I use... I put the
WinRadio in the top 4 (behind my FT767,
AR5000, and AR3000) BUT.... it gets the
most use.... because I don't have to hold the manual in my hand everytime I try
to use it.

>The comment
>is based on my personal experience of some 45 years in amateur & commercial
>communications technology.
>

Judging by your e-mail address I'm ASSUMING (you know how that goes)
you are a DENTIST.... OK, you have me
by a few years of personal experience
(didn't start "scanning" till the late 60's and it wasn't scanning back then
it was "TUNING".Used an old Lafayette handheld tunable radio with a 4 foot whip

antenna (almost laughable by todays standards) Most of my time has been in the shortwave and public service bands.
On the other hand, I have worked commercially as a radio tech (10 years) and have written numerous articles (published in trade magazines) on radio servicing, trouble-shooting, repair and modifications.

I still contend that even though the Winradio is 4 times the money of the optocom.... its 4 times the radio.

I agree that the language you refer to is normally the sign of a
bankrupt mind. (And it's only obscene when it refers to something
obscene.) However, I don't think that censorship is the way to
go. Censorship allows a lingering ignorance to thrive.
Education and exposure, OTOH, permit the better minds to see the
emptiness of such language. And 14 does not appear too young to
begin such an education. Just my two cents.

Hello Michael Alexander,
Why is it that when you posts these trouble making comments, you always
use an assumed ID (such as Skip Jackson, here) rather than your own
name of Michael Alexander as you usually do?

Michael
You are correct, censorship is not the way to go. I just feel better sitting with my son at the computer the first few times as he is reading the newsgroups. He pick a great hobby (radio elec.) to become interested in and the internet/newgroups are full of great information. I would just rather make sure he doesn't become discouraged by reading a few ridicules posts.

I have a Bearcat Trunking BC895XLT Base scanner for sale. It has seen minimal use and I have used it for about 3 months. It is mint, with 300 channels, 800MHz, trunking, 10 banks, weather alert, CTCSS tone board, search and more. It is also computer compatible.

Send any questions or offers to:

XxSoloArtistxX@aol.com

Thank you

I am also waiting to hear from users. However, this radio was pulled from release to the US market at the last minute due to a problem with audio "hiss" and is not scheduled to be released until January 2001. I have seen a few responses from oversees users and so far appears to be positive but not enough detailed info.

> I need a little more description before giving advice.
> ~Steve~

Symptoms are: Much used buttons like the Manual and Scan buttons, as well as
up and down arrows for the direct search have to be pushed about 20 times
for them to respond. This has gotten progressivly worse. Buttons seeing less
use like some of the numbers (because the radio is mostly all programed)
still work OK for the most part. Same thing happened to my Pro-43 last year
and I had the key pad replaced and all now works fine.
I have yet to try simply cleaning the contacts, but think the problem may be
more serious.
Thanks,
Phil

What with all those trunking scanners that people are spending good
money on and all those trunking programs that let your computer controll
non-trunkable and trunkable radios and the fact that radios can be
programmed over the air; leads me to some interestingf questions:
1.) Can a computerized virus be sent over the air?
2.) Can a scanner be infected with one or more of these BUGS?
3.) Can a cellphone be infected?
4.) Is there an anti-virus program that can get rid of a
bug like that?
5.) Can those PALM type computers be infected too?

I don't understand what the big deal is with these older scanners. They're
slow, bulky, and have limited channel capability by today's standards. "But
they can receive cellular", you say. So what? Almost all of these
transmissions have now migrated to digital PCS phones.

There was a false, but widespread rumor that the PRO-2021 was capable of modification for 800Mhz reception. This was due to the fact that the PRO-2021 (despite being a VHF/UHF only scanner) COULD be modified to DISPLAY 800Mhz frequencies. However, it could not RECEIVE these frequencies, since the front end did not have 800Mhz capability.

Good info at this link:

http://enterprisesecurity.symantec.com/article.cfm?articleid=416

A trojan horse (not a virus) is more likely but most items you
listed aren't programmed via RF transmission so they are immune.
If my Palm Pilot gets a bug, I do a manual reset, then a hotsync, which
recovers
all data (including programs) since the last hotsysnc. No big
deal to recover, which takes the "fun" out of it for bug programmers.

Phil,

The "Keytop" (rubber membrane) has conductive pads
on the back that eventually wear out. This is a very common
problem on PRO-43 scanners. It isn't an expensive item to
replace (~$7-$15) but is a pain to take the scanner apart and
replace it.

The P/N for a PRO-2006 is #10788107 (KEY,TOP GRAY).
The P/N for a PRO-43 is #10789808 (KEYTOP)

To order parts call 1-800-843-7422 or visit your local Radio Shack store.

If you'd prefer having this done for you, I offer this service through
my website. Any questions, contact me directly.

Off the top of my head...

DB Kelly, US Security, and Guardsmark use 464.5 and 464.55MHz.
The Worcester Common Outlets/Greendale Mall people use something around
462-465mHz, I have the freq at home (I am at work now, sorry).
There are myriad users on 154.6 (Wright Line, Wyman Gordon, etc....not
even sure who belongs there and who doesn't) but with the advent of
GMRS many "freebanders" on that freq are finding themselves in need of
new radios!
Someone is licensed for a 10m (FM) freq, around 27.49 I believe, again
I have that info at home.
151.895 and 151.955MHz are also used, but I can't recall by whom.

Have fun, I can clarify more tomorrow.

Maybe check that the solder isn't grounding on anything else nearby?
I did the mod a while ago and it worked first shot.

BTW, the "60" without the "dash-1" at the end is a 10 chnl that
doesn't have a readout, but only the digits 1 thru 10 on the LCD.
A very simple, but good-performing, basic scanner. One of these days
I'm gonna open that one too, and maybe I'll find two solder pads to
connect there too.

>Any idea how old this thing is?

Decoding the date code on your Uniden Bearcat scanner is as follows.

The date code consists of a two digit code representing the month followed by another two digit code representing the year.
For example, the date code

0AID would decode to Jan 1994 0A = Jan (A=1, first month of year) ID =94 (I=9, D=4)

0EIC would decode to May 1993 0E = May (E=5, fifth month of year) IC = 93 (I=9, C=3)

0CI0 would decode to March 1990 0C = March (C=3, third month of year) I0 = 90 (I=9, 0=0)

A=1, B=2, C=3, D=4, E=5, F=6, G=7, H=8, I=9, 0=0

The following information was posted today at the Openness website located at www.openness.org. The site is an advocate stage for the advancement of open public safety communication systems. If you are concerned about losing access to public safety communications in your community, make yourself a part of this campaign today. Newstips, links, and other information can be mailed directly to davidpin@pobox.com:

TEXAS CONVICTS MAY NOW HAVE SCANNERS

There's no denying it, bad guys will try to take advantage of open public safety communication. But disorganized opportunistic bad guys with scanners are repeatedly caught having never made effective use of them. In any event, there are a lot more good guys with scanners than bad.

http://dailynews.yahoo.com/h/kprc/20001226/lo/277253_1.html

MAN LISTENING TO SCANNER HEARS POLICE CHASING HIS WIFE

There's no telling what the plugged-in citizen will hear scanning their local police. This story tells of one man who was alerted to a police chase thanks to his scanner, only to find out that the police were chasing his wife!

http://www.jsonline.com/news/racine/dec00/scanner28122700.asp

COMPUTERS TAKE MEGABYTE OUT OF CRIME

Across America internet listservs are being used broadly by public safety to communicate with the public at large, or in specific groups. For instance, one police-run listserv might address business owners directly, while another citizens in a particular district or zip code. A listserv is the first thing outside a website public safety can do to take advantage of distributed notification. In some ways they are much more reliable than the popular "Reverse 9-1-1" systems which require someone to actually answer a telephone to definitively deliver an alert.

http://www.channel4000.com/news/stories/news-20001227-155745.html

Visit www.opeNNess.org or subscribe to the listserv

>
>What with all those trunking scanners that people are spending good
>money on and all those trunking programs that let your computer controll
>non-trunkable and trunkable radios and the fact that radios can be
>programmed over the air; leads me to some interestingf questions:
>1.) Can a computerized virus be sent over the air?
While it is posible to send anythgin over the air, I would not worry
about my PC/radio becoming infectred by data that I am monitoring.

>2.) Can a scanner be infected with one or more of these BUGS?
Even fancy radios like the PCR1000, that have EERAM, do not accpt a
program that could be infected, but only accept data. Bogus data might require
a hard reset, but that would the worst.

>3.) Can a cellphone be infected?
Not today, but as they make phones smarter, it could happen some day.
>4.) Is there an anti-virus program that can get rid of a
> bug like that?
No bug, no cure..
>5.) Can those PALM type computers be infected too?
This is a funny one, I won a 2 litre Dr. Pepper back in August from a
friend, we had made a bet a year ago that someone would take the time to
create a virus for a Palm computer. I missed the event, but 3 or 4 days before
the bet was to expire Macafee announced a Palm virus and a cure. As the owner
of a brand new plam unit I will have to learn a lot more about their uses and
risks.

You guys kill me saying almost all have moved to digital. MOST rural areas don't have digital coverage and the ones that do will be using regular analogue for a long time. There are people out there who have no idea that they can be heard and love the cheap price of the older phones. Hell, you can find many, many conversations at 3 and 4 in the morning where I live. Yes, most are boring but there are some that are unforgettable!

Body handling: HTML body converted to readable text

First you will need a discriminator tap (pure signal unamplified) to do this! Don't think your going to simply run the headphone jack into the soundcard and decode these with much if any success. It can be done but it's not worth all the errors you get. I have tried my PCR-1000 both ways. The result is 90% loss using the headphone jack and only 10% (at most) using the discriminator jack output (packet).

You will need a program called POC32.
http://home.nikocity.de/go/poc32/
Please don't ask me how to use it......if I can figure it out then so can you. There is a troubleshooting link on his page.

Remember, DON'T expect much without a discriminator tap! Your wasting your time.

PS. If you want to monitor for a certain person, look at the back of their pager. Most pagers nowadays has the "capcode" which id's them and the frequencies the pager is tuned to! If you have these, you can set it up to just monitor for them and then show what they are receiving on the pager! Or if you know the frequency, you can send them a message and when you see it write down there capcode because the program will show it to you.

Jim, have you seen the new Icom IC-R3 receiver that is not only a full coverage receiver,
but also has a built in monitor that receives Television Broadcasts. It covers from 0.5 to
2450 MHz and has 450 memory channels. It should do about everything you want to do
except receive Cell which you really don't want to do. Try the link below, go to Receivers
and then scroll down to the IC-R3.

Hi folks -
I'm a sound person who goes out on shoots (mostly single camera Beta shoots).
I would like a full coverage HH scanner, that can pick up wireless mic freq.'s,
(wireless mic freq.'s that I use are usually TV block channels 20, 21, 22's)
altho I travel quite a bit - I would need the possibility of receiving other freq.'s, SAP for TV stations (sometimes the production crew at the station will send their "direction" to the talent via SAP), really cheap wireless mics use 800-900 freq.'s, I guess cellular would be nice - as some TV stations use the cell fone for "direction" to the talent here as well -(IFB) - It's good to hear the station tell the "talent" to point at something away from the microphone - I can reposition my boom pole or at least be aware that the "talent" is going to walk "out of frame" again...LOL
I also do some sports audio & would like to pick up the ref's mic for reference -
while I have permission to use the ref's mic - I'm kinda tired of rummaging under &
behind the PA system of "the stadium" and trying to convert their mini plug/1/4"
output - isolate it from ground & convert it to xlr balanced for the "remote truck"
only to find out that the whole cheesy operation now creates a "buzz" in the audio of the stadium. A scanner would be "ground isolated" - the mini plug (earphone) output
(8 ohm - 150 ohm) is something I'll contend with.
Of course, the scanner would have to be capable of Wide Band FM & Narrow FM, AM (I guess "Air" would come in handy as well?).
To get cellular - would I have to buy my "radio" in Canada??? How is that done??

I have done some looking - the Yeasu VX-5r is the only one I've found
that does do most of the above - However, that is a xmitter - I'm studying
for my amateur license so that should help.
U guys are professionals at what U do - so can U give me some insight to
make my life easier?
Thanks,
Jim

Bud - You certainly are not one to speak considering YOU have been caught lying here on this newsgroup on the past.

The smartest thing you could do is to simply drop out of this thread.

Just Bud <thekat@san.rr.com> wrote

That's about where we ended up here. Apparently the perpetrators were also upset because the knock on the door caused them to break the cupholder on there new computer LOL

haha hoho, ok that was a bad one. But hey did end up getting them. They where in the next apartment over, no footprints . . . But the policedog knew which floor to get off at.

Dan, if you'll read my post at the Gainsville Sun forum, you'll see that is
exactly what I proposed. I may not have been as clear in my NG post. I
suggested they should simulcast the primary dispatch channels for police.
fire, and EMA on VHF frequencies. This has been done in other areas, I have
heard. As the agencies have the equipment needed already, how hard can it
really be to tie a seperate VHF transmitter into their system.
Also, please note that I'm not the same as "markj", my postings are "M.
Schneider" and I sign them with Mark. So, please, don't get us confused!
I've got "markj" blocked, so I don't even know what he's saying, unless
someone quotes him in a response.

I own a Winradio 3150i-DSP and I concur. This is one of the best
radios I owned, even if there were none of the later software add-ons
such as XRS plugins, Radio Basic, etc. They just keep adding functions
and making it better all the time.

And I say all this despite my 35 years of professional and amateur
experience... (yeah I am *that* young... ;-)

Chris

VR5000 is a receiver and very slow scanner. That's why I got the new and
cool AR8600. Now that's a wideband scanner. Has ctcss (option) no trunk.

5088. Finally got my BC780XLT!! WOOHOO!!!

Newsgroup: rec.radio.scanner
Date: 2000-12-29 13:15:25 UTC
From: RaZ0r! <extreme_gamer@hotmail.com>
Message-ID: <e4036.15022$O7.759987@news-east.usenetserver.com>
Source record: 73487

After waiting months and months, I FINALLY got my BC780XLT!!

And let me tell you it was WELL worth the wait!

I'm a slightly above novice scanner listener, but I'd be happy to try and answer any questions anyone may have about it.

Here's the deal on the software:

Nope, the software is not included. There are two pieces of software they offer for this scanner.

First there ScannerMaster/WinScan software that you have to purchase for $69.95. This software is the PC interface software. The screenshot included in on the flyer shows the interface mimics the actual face of the scanner. It claims you can download a trial version at two different address, but both of these web pages are imcomplete as of today and do not have the software to download. The pages are:

http://www.bc780xlt.com
http://www.scannermaster.com

The features of the software as listed on the flyer are:

* Looks and works just like the front of the scanner
* Control the BC780XLT from your PC
* Program the BC780XLT from your PC and backup your scanner's memory to your PC
* The Quickview (small) window allows you to work on your PC while you scan
* Import frequency files from other versions of WinScan
* Phone, E-Mail, and Online Support
* Search mode hit counter!
* Fully customizable color schemes!
* Create scan lists for mutiple states and cities
* and much, much more!

(I have to snicker a little at that last feature, sounds like an old Ronco commercial.)

Oh, and here are the minimum system requirements for the software:

Pentium 75 MHz, 15MB RAM, 2MB Video Card (800x600 at 256 Colors - minimum), 10MB free hard disk space (Plus space for the custom scan lists), Free COM port (COM 1 or COM 2), Windows 95/98/NT 4.0

The second piece of software is free and can be downloaded from Uniden's home page and is for use with the SmartScan feature of the scanner. The SmartScan feature allows you to download frequencies for your scanner, based

on your zip code, that include bank tags and alpha tags for you area. You can either do this by attaching an external modem directly to the back of the scanner, or you can use a modem attached to a PC. To use a modem attached to a PC you must download the free SmartScanner software and attach the scanner to the PC with a serial cable.

The scanner appears to have a standard DB-9 female connector for hooking to a modem and/or PC. The manual says you can use a standard serial cable, which is not included. I'm going to buy a cable today to hook my old external 28.8 modem to it and see how well the SmartScan feature works, as I do not have a modem on my PC. (I'm SURE I'll end up reprogramming it myself, as I'm unsure how current Uniden's information will be.) I'll will post again with my results later today.

Other quick notes, the display is larger then I expected (actually the scanner itself is larger then I expected) and is bright and very easy to read.

The alpha tags on the banks is a very nice feature alone, not counting the alpha tags you can have per channel. This is very nice when scanning multiple banks at the same time.

It appears to have much better reception then my old BC895XLT, I moved the ant. from my old scanner to the new one, and the sig strength meter stays pegged when receiving on the 780. It never did that on the 895. It must have more power, as the AC adapter for the 780 is about twice as big as the one for the 895.

C-Ya!

I have an EXCELLENT Q7A which comes complete in the box with all original accessories. As a matter of fact the some of them have not been used. This radio was seldom used, and is no good to me anymore since the local PD has gone trunk.

It has the following mods performed by Scanners unlimited (famous local outlet):
extended receive including SW, extended transmit, internal mike replaced with internal motorla minitur mike (improved audio).

I also have the software and new computer interface cable for this. Eveything has been sitting in the closet in the box.

The entire package, with mods, cost me almost $400 last year. Let me know if you are interested in taking it for $250 shipped. I will also include a custom leather case which I got for it. Oh,I also bought a $30 improved mini antenna for it from Scanners unlimited, which I will also throw in.

This information is a bit dated (1996) but might still be useful. The
license is Tournament of Roses Association & Festival Artist.

A few years back the Tournament officials (white suits) switched to Nextel
so I would imagine that some of these channels aren't used anymore.

Once your query is done, and the file is downloaded, look in the
directory that you downloaded it into. It comes with the .ICF file
extension, which is the format that the DOS program, and as far as I
know, the Windows program, uses. All you should have to do is make sure
that the file you downloaded is in the same directory that your
programming software uses to store files and it should be able to read
it. Good Luck...

If you want to compare reception/discrimination/audio qualities, then split the signal from a single antenna and feed it to the 895 and 780. Given an equal split of the signal, one radio may have better audio, better discrimination, etc. Signal splitting is of course not an efficient way to operate receivers, and there is potential feedback from one radio to the other, but it gives a general idea for comparitive purposes. I'm sure Strong Signals or similar will soon compare these radios under more controlled conditions, but it's nice to hear consumer impressions hot off the press!

5097. Discussion Topic for the Day - Internal Antenna Add

Newsgroup: rec.radio.scanner
Date: 2000-12-29 16:37:58 UTC
From: "David M. Hitchner" <biteme@spammers.net>
Message-ID: <C5336.5022$IL1.178461@news2.atl>
Source record: 73495

I just saw a TV ad for an internal antenna that is supposed
to improve cell phone reception. Basically it looks like a
flexible printed circuit board that sticks inside the battery
compartment. From what I saw the circuit board looks like
it could be a printed circuit antenna or inductors.

Just out of curiousity, is there any merit to this thing or is
it just like the "ball on the end of the antenna" scam?

The only way that I could see this thing working is by acting
as a passive repeater tuned to the cell band or by acting as
a ground plane for the regular antenna.

Beg pardon, but that may mean only that one or the other meter, or both,
aren't calibrated properly. Those meters costs the manufacturer about
three cents (well, okay, maybe six ;-) and I wouldn't count on their
accuracy. The way to evaluate "better reception" is to feed the same
signal to both scanners and listen -- see if one picks up weak signals
that the other doesn't, etc.

Oh I agree. It is surely not a scientific comparsion. :)

OK, so I tried connecting my modem to the scanner directly, I could never get it to dial.

So I tried attaching the modem and the scanner to my PC, and loaded the SmartScanner software. After changing flow control on the scanner to RTS/CTS it worked!

The number it dials it a *900* that charges for access, how much I payed I do not know. (Which is VERY scary.) I think the fact they charge is pretty lame.

It downloaded about 150 freq., and what a weird, unordered set it installed! I mean everyting like AirForce, Game Warrden, etc. The only thing that was in any type of logical order was the trunk system freqs were entered together. I'm a Police and Fire person myself, so this feature is pretty much worthless to me. The alpha tags appeared super short, as if it came out of some gov database directly.

Anyway, I think custom programming this thing is the ONLY way to go.

Now, I called to order the software, and they said it won't be ready till the middle of Jan. (BC895XLT dejavue)

So do I live without alpha tags until I get the software? Or do I program alpha tags via a "turn the wheel to the letter you want and hit enter" interface? :)

BC's (Uniden) freq listing is a "nice to know" database, but it is all available from PerCom, Police Log, etc. anyway. You are probably better off to establish your own (consistent) method for labeling alpha-tags, make your own database of them, and then enter into the radio as you have the time. Build the database first, otherwise you will end up with a mixed-bag of labeling, and make more work later to fix it. Later, if you buy Scancat or similar, it can read your database (text, de-limited) right into separate files as you desire. I have to manage well over a thousand frequencies here in the Hampton Roads area, and coudn't do it even with 4 radios without assistance from a radio-control software.

5108. Unusual VHF Federal / military activity in MA

Newsgroup: rec.radio.scanner
Date: 2000-12-29 20:01:35 UTC
From: methusaleh11@my-deja.com
Message-ID: <92iqiq$sd0$1@nnrp1.deja.com>
Source record: 73506

Greetings all,
Just driving around the Worcester/Shrewsbury/Westborough area and I caught a few interesting bits of traffic. These freqs are all programmed into my PRO2066 and scanned regularly but activity on them is unusual...

50.5 (MA National Guard aviation freq) "One eight one mobile" doing radio checks with "one eight one" -- I have never heard anything on this freq before

138.225 (FEMA nationwide) strange sounds like someone trying to TX with a handheld with a dying battery...kind of like a rising and falling pitch steady tone sound...heard in several locations, always moderately strong.

154.6 (typical business/MURS freq) extremely loud and clear, could only hear one side of conversation, either very formal business or military radio checks (I am in the Army NG and have commo experience and the person was using Army radio SOP) with callsigns like "X2T14" and "YB905," mention of "those vehicles that are equipped with those devices"

Just for everybodies info, back in the early 70s one could recharge
Alkalines with
reckless abandon and worry not. The battery industry was using a different
formula
then and of course wasn't telling anybody they could be recharged. I
recharged
the daylights out of a bunch a D cells for over a year with no chemical
retrobution.
Then the battery industry CHANGED the formula and pronounced it as an
improvement
but now you and I know what they were really doing and now you now the rest
of the story.

Source record: 73517

I am having trouble with deciding whether buy a HP Scanjet
6300CSE or Epson Perfection 1240U from you. HP Scanjet 6300CSE
runs a lot out of my budget (US $100-180). Also I know Epson
Perfection 1240U (previously 1200U) is ranked super bu CNET.

I am buying this scanner for my small little law firm.
Lots of
B&W and occasionaly (but rather mission critical) photos
to
scan. Since we have digital cameras what we can are those
physical photo copies we get from our clients.

Also we need a scanner that convert B&W documents very
accurately. Speed is also one the our concerns. We do not
scan negatives.
We want to spend 100-200 on this.

Judging from the above-mentioned situation, do I really
have buy a scanner with 1200*1200 dpi or 600*600 (or
600*1200) dpi will do. Since the price difference is
rather big...

Thank you for recommendation.

5121. Introduction to speech inversion descramblers!

Newsgroup: rec.radio.scanner
Date: 2000-12-29 22:44:50 UTC
From: ctpds49@aol.com
Message-ID: <20001229174450.28202.00000240@ng-ff1.aol.com>
Source record: 73519

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

In 10 years you won't be able to monitor anything except for ham radio
and weather broadcasts. Everyone is going digital and will soon be using
encryption. Digital is mandated by the FCC to allow more users access to the
specturm.

The channels worked great, I was down in Anne Arundel the other day and it was picking up great. I just got the antenna today and am still playing with it from the house. So far, still nothing.

It says to extend 1-3 of the lower sections only for 220-1200 MHz any suggestions as to the best length?

If this doesn't work out, would an outdoor antenna work better? Can you recommend one?

Thanks again,

John

[Followup set to rec.radio.amateur.antenna]

Hello,

I've been receiving weather sat images for several weeks.
I've progressed from an unmodified Radio Shack 2006 scanner
with a Discone antenna, to a Hamtronix R139 receiver with a
home-brew QFH antenna. My image quality has improved as I've
modified/upgraded the hardware. However, I'm at a loss how
to improve further.

My present setup:

Receiver:
-Hamtronix R139 Weather Sat Receiver
http://www.hamtronics.com/

Antenna:
-Home-brew QFH antenna, located at ground level
-50' interconnect, RG-213U coax, soldered PL259 and BNC
-antenna made with RG-58 coax per the following.
http://www.rig.org.uk/Members/Software/body_software.html

Demodulator:
-Dell 600Mhz, Turtle Beach Montego II A3D 320 sound card
-SatMon
http://www.satsignal.net/

I am getting vertical noise lines across the image. It appears
to be 60Hz related as there are 30 lines across one of the .250sec
NOAA horizontal scans. (120Hz) I've located the receiver ~10 feet away
from my PC, I've located the antenna as far away from the PC as possible,
I've tried disconnecting the power supplys for the speakers
and printers. I've turned off the monitor. I've moved the feed cables around
(with respect to my PC and PC power lines) but note little noise improvement.

I had the QFH located in the attic at one time. However it was connected
with RG-58 and had similar noise problems. I'm quite sure it I re-install
it (even with my improved RG-213U coax) I'd see the same noise.

I note the noise does decreases slightly as the bird overflys. This leads me
to believe the noise is entering on the antenna rather than my demodulated
(and screened) audio feed.

I do have a cell tower located 1/4 mile from me.

This appears to be my last major hurdle before obtaining quality images.

Any help would be greatly appreciated!!

This is a link to an example file.

Probably a basic question, but why is the ability to decode
CTCSS/DCS/DTMF tones important? (Actually, I think I understand CTCSS
and DCS--that would let you follow a single conversation on a
frequency used by multiple agencies, right?)

Thanks.

Bill Seward

Could the 138.225 frequency have been in AM? - the military makes
much use of the 138-144 & 148-150.7 bands in AM for aircraft use -
air to air, air-to-ground. The 2066 doesn't allow mode changes, but
some others do.

Don't know about the other two - I have 50.50 listed as you do, but
I've yet to hear anything on it.

5133. Live Scanner Chat

Newsgroup: rec.radio.scanner
Date: 2000-12-30 01:55:33 UTC
From: - <psleprob@hotmail.com>
Message-ID: <3A4D4054.3EB4B3DF@hotmail.com>
Source record: 73531
Cross-posted to: alt.radio.scanner,rec.radio.scanner

There will be a live chat going on in the #scanatlanta chatroom on the DALnet servers of IRC tonight starting a little after 9 p.m. EASTERN time. While most of the past participants have been from the Atlanta area, we invite anyone to stop by and chat about our hobby and what you happen to be hearing on your scanner tonight.

The is a pretty laid back chat group and we aim to keep it that way. THIS CHATROOM IS NOT A PLACE TO CONDUCT FLAME WARS, DISCUSS POLITICS, OR CARRY ON ANY OF THE OTHER USELESS CRAP LIKE HAS BEEN SEEN IN THE "USENET" NEWSGROUPS. If you can't be fun and sociable, please stay away.

For those of you who aren't familiar with connecting to chat groups, some info. is posted at the end of this message that should help anyone with a basic knowledge of computers to get started.

Check in on Saturday and Sunday nights too.

Hope you have a chance to drop by!

Use an IRC (internet relay chat) chat program such as mIRC, pIRCh, etc., to access the ScanAtlanta chatroom. You download the mIRC program for FREE at http://www.mirc.com/. There are lots of FAQs covering IRC chat in general on this site. Since that website gives a good overview of IRC, I will not try to duplicate it here. Basically, "IRC chat" is a way to chat "live" with people around the world.

IRC software packages are available for most any computer running Windows 3.1/95/98 and Mac. These programs are not hard to setup and run for most people but everyone's computer is unique and thus could have conflicts of some sort. We have tried the Java based chat software programs, but they were very slow/cumbersome. Since we did not get a good response from new members toward the Java programs, we went back to IRC based chat.

Once you download the mIRC software and install it, follow the setup directions as prompted by the software (put in fake stuff for your real name and email address!!) and pick a nickname for yourself. Then once you are_already_online to your ISP, you click the second icon from the left ("options") on the icon bar found near the top of your screen. A popup window will appear. WE HAVE SWITCHED TO THE "DALNET" SERVERS BECAUSE OF THE HIGHER PARTICIPATION RATE AND APPARENT EASE OF USE FOR SOME VISITORS AS COMPARED TO THE PAST SERVERS. Go to the second drop down box which lists the different servers available, scroll down this

list until you get to the section that starts out with "DALnet" server names, click on one of them (I usually try the one in Ohio or New York, but you can try any_one_in the US). Then click on "connect," NOT the "OK" button. It will take a while to connect and get you going. Click on the "Status" box to watch your computer and the server "do a dance" and connect. This little dance can take a while to complete. Additionally, you may get a "can't connect" or "server full" error which means you must try another server. To do this, you again click on the second icon from the left ("options") on the icon bar near the top of your screen and choose a new server (follow the directions as above).

Once things come up on the screen, click on the "channels" icon (third from the left). Type in #scanatlanta in the top box/entry field, then click on "join" - NOT "OK "or "close" buttons.

If you are successful, you should see a new window open and you will find yourself in the chat room. On the right side, you will find a listing of those who are in this chatroom. Just type in "hi" (and hit return). Somebody should
answer you. NOTE: Often people will go away from their computers for a few minutes to do other things, so stick around for a few minutes if you don't get an answer right away.

The chatroom is open for anybody to use 24 hours a day, 7 days a week, but as of late, about the only time you will find anybody "alive" in there is on Friday or Saturday nights. If anybody actually shows up on these nights, they usually come in around 9-10pm Eastern and most usually leave around midnight (depends on how interesting the airwaves are that night). If nobody seems to be "alive" in the chatroom, post a message to the ScanAtlanta list and invite people to join you in the chatroom.

This chatroom is a place for people to come have fun discussing scanners in general and what they are currently hearing on the airwaves. THIS CHATROOM IS NOT A PLACE TO CONDUCT FLAME WARS, DISCUSS POLITICS, OR CARRY ON ANY OF THE OTHER USELESS CRAP LIKE HAS BEEN SEEN IN THE "USENET" NEWSGROUPS. If you can't be fun and sociable, please stay away.

If you post a "breaking event" message to ScanAlert, monitor the chatroom to hookup with others who might also be monitoring the same event (put a "meet in the chatroom" notice in your post to ScanAlert). If you post a message to ScanAtlanta/Alert for people to join you in the chatroom, remember, it can sometimes take 15 minutes for your emails to get out to people via EGroups.

That is a brief overview. Read the FAQ's on the mIRC website if you have problems connecting. Visit the homepage for ScanAtlanta at http://www.scanatlanta.com

Wrong. If my 5/8th wave vertical antenna which is resonant on 904 mhz is made longer it will screw it up and work like crap.

> As for that ball on the antenna scam, (I am sure you know) it was for
> the sole purpose of keeping people from poking their eyes out... nothing

But David may be onto something. If it is used as a passive GP it might help. There used to be a product out for ham radio handhelds called a Tigers Tail. It was just a wire that was hung under your antenna connected to ground. Most HTs work better with this tail acting as the radials.

I have a PRO-92B scanner that was purchased on 10/26/00. The scanner is in 9 out of 10 condition. Comes with antenna/ manual and box if I can find it. Please email me and make me a reasonable offer- including shipping- and we can discuss. I would also be inclined to trade for another TT handheld and cash. Please email me at ebizay@cs.com with offers/questions. Item will be shipped after payment is received.

So while the FCC is trying to free up frequencys...you want to add/keep more ?
Your logic flys in the face of what APCO and the FCC are trying to do. Simulcast
are allowed under certain curcumstances like having FD voice pagers and such
until the transition is complete. I guess if it suits you it's cool If it suits
the general public it's not cool...right?

CTCSS and DCS tones allow several users on a frequency to share that
frequency without having to listen to each others conversations.

For scanning purposes, if you had several businesses (or police departments,
or whatever) on the same frequency, but you were only interested in hearing
just one, you program the frequency along with the CTCSS tone of the one
that you are interested in hearing, so only the agency using the correct
tone will be heard. The others may be using the frequency also, but you
won't hear them. Of course, if you want to hear everything on that
frequency, no matter who was using it, you wouldn't use a CTCSS tone.

Another use for CTCSS tones is to eliminate paging and other interference on
the frequency of interest. Since the interference isn't likely to have the
same tone as the frequency that you want to hear, the frequency is quiet
unless it is in use.

The folks that need access to the system are finding the backdoor wide open.
The ones complaining are those that don't want to take the time to learn about
or find that backdoor.
Digital radios are for sale used on ebay...the programming info... all of
it...is on the internet.

Is there something here ya all don't understand.
Oh BTW...just saw an Astro Radio go for $850 on ebay....let's do the math...$349
for a BC-780 and maybe another $500 for a digital board when it's released.
Wow...you just saved a dollar!

Right, but the item that is being referred to is some sort of printed
circuit that you stick inside (anywhere) your cell phone and it dramatically
improves reception.

The only way I can possibly think of this thing working is if by some way it
improves the capacatance between the ground of the cell phone and your hand
(and the rest of your body). Yet all you do is stick the thing inside the
phone, no electrical connection to anywhere. I would think that you would
already be capacitively connected to the ground of the phone anyway, and
this little printed circuit isn't going to help much.

In other words, it's a scam.

The following information was posted today at the Openness website located at www.openness.org. The site is an advocate stage for the advancement of open public safety communication systems. If you are concerned about losing access to public safety communications in your community, make yourself a part of this campaign today. Newstips, links, and other information can be mailed directly to davidpin@pobox.com:

CHINA APPROVES TWO PORTALS FOR ONLINE NEWS

Those who follow the arguments of Openness.org are familiar with my endless comparisons between the oppression of free media in commie states like China, and in democratic societies like America. After all, it isn't that you are the citizen of a democratic or totalitarian society, it's that you're the citizen of a super power. As such, if China oppresses free media, then so must we - or at least we are tempted to. When local law enforcement bargains with local media outlets to provide access to public safety radio communication but excludes everyone else, it essentially and arbitrarily partners with corporate media at the expense of true openness and the free flow of information. This is one way that "our" system quashes "dissident" media when necessary. Open broadcasting helps to preserve the central theme of democracy by insuring that we all have an opportunity to report on and act on the very same information as everyone else. Not an elite few.

STATE TO TRACK STOLEN PROPERTY ONLINE

In many ways the State of Florida agrees with the principles of distributed notification. This article is a bit late but expressive of the positive attitude towards the potential for "14 million eyes" to assist Florida law enforcement in tracking down stolen vehicles, property, and wanted persons. Florida is the first state in the country to make such information searchable by the public at large. What's really flattering is that the FDLE says it got the idea from the Polk County Sheriff's Office who, in turn, runs one of the most informative police websites Openness.org credits today. However, guess who personally had long e-mail debates with the Polk County information officer back in 1998 when that county demanded a password to see information? Yours truly! I can't say the Openness campaign led to Polk County creating the best police site on the web, but we'll never know for sure I didn't! :) Never let it be said this online campaign stuff don't roll up hill! Anyway, this article from October

underscores the value of an integrated society fighting crime.

http://www.usatoday.com/life/cyber/tech/cti654.htm

CONFIRMED: SCANNER USER TIPPED OFF TO MASSACRE IN HIS OWN BUILDING!

In Gainseville Florida reasonably intelligent people are scratching
their heads over whether or not the public at large needs access to
public safety communication. Meanwhile, a crazed gunman is stalking
the cubicles of his office building in Wakesfield Massachusetts
systematically taking lives with an AK-47. In another part of that
building at least one member of the "public at large" is being tipped
off to the danger by his police scanner and locks the door to his own
office. So ... did I mention?...in Gainesville reasonably intelligent
people are wondering if scanners are good for the public at large.

The Provincial Police here in Ontario Canada use CTCSS tones for a different reason. They don't like people scanning their freqs. so the transmit a constant "squawk" on their repeaters. The only time the squawk shuts off is when one of the mobile or base units transmits a tone.

The problem is, if you try to program their freqs into a scanner without a tone board, you stop on the channel on every scan! But most of the time all you will hear is "squawk squawk squawk . . .."

enter the correct tone, and voila, all you here is the actual comms traffic, no more squawk.

Hi to LabTeck & Chris, & thank you for sharing your opinions with the group.

I hadn't meant to get into an argument here about whose opinion was more correct, so let me begin with a conclusion ------

"If it works well for you, let it lie."

The bottom line here is that it does work well for both of you, and no one should try to persuade you otherwise. But the original question was posed by someone who hasn't yet made the plunge, and when they finally do, depending on circumstances, they might be disappointed.

My receiver experience goes back to 1952, starting with a Hallicrafters S-38b. You can still find a few of those in Radio Museums! Since then I have owned most of the Hallicrafters, Hammarlund, Collins, Drake, and Regency series, as well as a number of offshore products. My commercial experience dates from 1958, during which time I either worked for or owned a number of VHF sales & service facilities.

About 2 years ago I purchased my first WinRadio product, a 1500e. This was the first receiver I had ever owned that failed to even come close, based on published specs, to the performance of I expected, and paled in comparison to receivers costing less than 1/3 of the C$1000 I paid for it.

A special visit to my QTH by the dealer with a spectrum analyzer gave us the clue that it was being blocked and 'desensing' due to strong FM & TV transmitters that could be received on it's meager 1/4 wave outdoor whip! Now bear in mind that the nearest FM station was 10 miles away, running 10kw, and the nearest TV transmitters were 20 miles away. During this 4 hour investigation, 3 other scanners in the shack were running flawlessly, while the WinRadio was deaf!

A few weeks later, I was able to purchase an FM trap from Optoelectronics, which was a great help in correcting the problem, and the radio came alive. But it certainly did not yet live up to expectations. Now it was useably sensitive, but the number of birdies and spurious responses on VHF/UHF, borne out by using its own spectrum display with a 50 ohm termination at the antenna connector, still indicated there were serious problems - problems of design. The number of spurs were too many to document - one report I read indicated there were more than 200 serious internally generated signals above 30 mhz. One individual who had technical experience with the product told me that there was basically NO front end - the first RF stage was directly connected to the antenna connector!

This problem precluded searching a band for unknown or intermittent signals: every other 'hit' was likely to be a spur, and unattended scanning was not feasable, because the scan would stop every second or so on a false carrier.

So I decided to just use the unit to monitor the local police channels. Unfortunately this agency uses a distributed form of trunking which puts a continuous data signal on every channel which is not currently active. One gets around this by using CTCSS to quiet the audio till a channel goes active. Here again, WinRadio didn't get it right! The PL they designed into their Digital Suite is either active on all channels, or not at all, and in any case requires the computer sound card to operate, and is too slow to react. Another strike.

The spectrum display was the one feature that was so unique that I was able to use it from time to time, and, having no other way to get the info from other equipment so quickly, I decided to retain my investment in the product.

Just a month ago, I traded in the 1500e for a 3150e, expecting much improved performance. Before I took delivery, my dealer, being very helpful, put the unit on the bench and checked sensitivity at a number of frequencies, and all appeared well. He assured me that this was indeed a much better radio, and I went home feeling I had done the best thing for a bad situation.

My trials began as I attempted to make the radio work with the supplied software on not one but three separate computers, including a laptop. Even the Demo wouldnt run without crashing. Finally, only after about 40 hours, 6 separate reloads of Win98 SE, and reinstallation of ALL networking software & hardware, followed by the latest version of the WinRadio software, was I able to run the 3150. Now I don't blame WinRadio for any of this software trouble, and indeed, they were very helpful in pointing me in the right direction for a fix. All hats off to the crew at Rosetta Labs as we exchanged about a dozen emails on the subject!

But even with the 3150, the performance is not as expected. The front end uses bandpass filters instead of tracking tuned circuits. There are still many (but fewer) spurious signals, the PL is still a boatanchor, and the scanning is substandard because the noise floor varies all over the place!

So lets slide into the present. Here I am in Tampa, on vacation. I (stupidly - sign of advancing age) forgot to bring along the N-100 FM filter. Scanning 33-47 Mhz with a RS mobile scanner antenna connected yields a noise reading averaging 60, but is 90 in some places. There are 4 spurs in this range > 120 (off scale). And this is useable performance????

Trying the same at 850-870 Mhz and with a RS cellular magmount gain antenna gives a noise floor of 50 average with peaks of 80 at the high end. Six more spurs extend higher than the noise, and only a few readable signals can be found.

Meanwhile, the Opticom, running minutes later on the cell antenna, reliably simultaneously tracks 6 trunked county & city PS systems, as well as 6 conventional PS systems, a total of 140 channels! And this despite the fact that most of the transmitters are 20+ miles away, with my antenna 8' above ground level.

It is quite possible that most of these findings could be corrected with the FM filter, but if both you gentlemen have commercial experience, when was the last time you saw a commercial radio schematic with a front end consisting of multi-megahertz wide bandpass filters? Can you imagine any manufactrer promoting such a design in our increasing polluted RF environment? I know of no other example even in consumer products in this price range.

So I apparently own a very unique piece of equipment which has many endearing qualities. Certainly the elegant & versatile software is an excellent example of what the attraction is. But still, this adventure has cost C$2000, with not a lot to show for it so far.

If you think my experience is exceptional, check of the reviews of these products at StrongSignals, WRTH, and Passport to World Band Radio. You might be surprised at how WinRadio products compare with others on the market.

But the bottom line is still, if it works for you, carry on!
I would certainly like to continue the discussion if you would grant me the favor.
Best regards for a Happy New Year.

Arthur

You say nothing from the house? How far away is Anne Arundel? I live on the west side of denver and I can pick up trunked systems on the SE side up to about 10-15 miles away with the whip fully extended (always with the pro 94, not as sensitive as they say it is). The airport trunked system at about 20 miles is in and out. You should be able to pick them up if you're within 15 miles. I've noticed my 94 doesn't recieve worth crap around my computer. You might be able to find a 'sweet' spot in the house where you can recieve better than others.

> If this doesn't work out, would an outdoor antenna work better? Can
you
> recommend one?

I have an outdoor antenna on my base scanner (disscontinued RS ground plane) but only use it to pick up (distant) VHF air and outlying PS freqs. I wouldn't spend the money on an outdoor antenna for a handheld. You could spend up to $75 on a better handheld antenna but I don't know enough about them or there performance for that price. Bottom line is if you still can't pick them up you need a more sensitive handheld scanner (maybe that will work) or a base model with a decent outdoor antenna.

Arthur,

I have NONE of the symtoms that you have mentioned on my unit. I have virtually NO birdies, and I do have a 50K watt FM station 6 miles away that is known as "50,000 watts of interference" cause it comes through on almost everything.... and I've never had to use a filter on the winradio. It will "bleed" some weak staions on the FM band in the DX mode.... but no worse than an other FM
radio in this area. Software installation was a SNAP.... everything loaded and worked just fine the first time.... took about 10 minutes (including the trunking software, digital suite, & the data base mgr).

From my research the 1500 was a bit of a lame duck, but one might expect that from a new company & a new radio... (trying to work out the bugs). I never owned one so I can't really say how good or bad it was.

You MIGHT want to send yours back to the factory and have them go through it.

The ONLY problem I have experienced with my WR3150i-DSP, is that after EXTENDED use (4 or 5 hours) the unit seems to get too hot and the PLL goes out of lock. I had to put the card in th bottom slot, because the CPU fan gets in the way
anywhere else. I figure a few holes drilled
in the bottom of the case should add some
additional cool air across the card to help prevent this from happening.

You should definitely get a trunk tracker. You can check them out
here: http://www.strongsignals.net/htm/trunk.htm
You should be able to find all of them (accept the new Uniden
BC780XLT) used. I would recommend the Pro 92A for a handheld (cheap,
plenty of channels, plenty used[new at http://www.grove-
ent.com/clearance.html for $220]).
For freq's do a google.com search for Chicago scanner frequencies.

Thanks Arthur, you seem to have had quite a spate of problems with the
radio, so I am not at all surprised that you may feel a bit negative
about it. In particular I am surprised about the software installation

problem as I experienced nothing like it (what was the actual culprit?), but good to hear it's been resolved. As you pointed out, the radio works well for me, including PL, so there is no point to continue comparing our experiences.

However, with the maximum of respect, I need to differ with you regarding your general comments about receiver front ends.

A front end typically consists of impedance-matched antenna input(s), switchable attenuator(s), preselector filters (more to this later) and preamplifier(s). After this, there will be a mixer and the first IF. There are few surprises in most scanners currently on the market.

Wide band receivers (such as Winradio, Optacom, Icom, etc.) have a number of bandpass filters to separate noisy bands (such as commercial FM radio) from weaker ones (such as the aviation band) to minimize interference. This is very common, and you will find them in any self-respecting wide-band scanner. The filter cut-off frequencies are also quite conventional (long established by practice) and most makers just seem to copy them from one another.

Your Optocom front end looks like this:

1. A switchable single-stage attenuator
2. 7-band filter
3. A single preamp

The Winradio 3150 front end looks like this:

1. A switchable single-stage attenuator
2. 12-band filter
3. 3 preamps (separate for HF, VHF and UHF)

This is a rather conventional front end, and you will find similar ones in most modern scanners. When you say "Can you imagine any manufacturer promoting such a design in our increasing polluted RF environment? I know of no other example even in consumer products in this price range."... then I have to answer to you: "Yes I can, and show me one manufacturer which does NOT do it this way, no matter what the price range is!" Your Optocon does, Icom does, others do. Yes, some have tracking filters, but certainly not a majority, and it is certainly not a must (the IP3 perfomance is not necessarily much better as the filters need to be tuned in a very wide range and so typically have a low Q anyway).

But I digress - what I really meant to say is that by denigrating Winradio's front end design concept, you are denigrating 95% of scanners on the market, including your favourite Optocom. .... ;-)

Happy New Year,
Chris

Maybe I should have been a little clearer in my answer - replacing a 1/4 wave with a 5/8 is an improvement. The longer the antenna, the better the communications will be.

Look at the Javiation UK page, there's a link somewhere, I believe.

<snip>

You got this one wrong. Optocom and Icom also have front-end banks
of wide pre-selector filters. All scanners have that, from minimum 3 in
cheap ones to 10 or more in better ones. WinRadio has 12, not too bad
at all. This is not meant to be the main source of a receiver
selectivity. It is used to reduce cross-band interference.

Ok this is the low down. When I have my scanner on INSIDE the car it scans fine until I START the car then it stops scanning and stays stuck on channel 9 frequency 154.0100. I have a Jeep Cherokee if that means anything and have tried running the scanner with batteries only and cigarette lighter adapter with same results. Anyone have any suggestions??

Try a different scanner with triple conversion IF to make sure it is not an image.
Try an external antenna outside of the car.
Skip that channel.
Try another car, Ha Ha

If you have a lock-out button, you can lock out that frequency just as needed, and the radio will scan all the others. You may find other scanners will not have this exact problem in your car, due to the fact the problem could be a frequency that is not 154.01 but something else that comes through your filter circuits as that frequency. This varies from one model to another. You can also reprogram something else at that frequency.

My PRO64 (triple conversion) does the same thing in my Ford pickup.
It is a pain, because our sheriff's department is on that frequency.
I wonder why that particular frequency?

Jack

Message-ID: <wUv36.34292$O7.1827398@news-east.usenetserver.com>
Source record: 73433

More info.

There are 10 banks of 50 slots for freqs. There are 10 banks (or Trunk ID Lists as Uniden calls it) of 10 trunk ID's per bank of freq. So 100 Trunk ID's for each of the 10 freq banks.

Each freq, freq bank, Trunk ID List, and Trunk ID can have an Alpha Tag. This is SWEET!

I currently have a Motorola Trunk, a GE Trunk, and a conventional system programmed and I can scan all three at the same time!

I tried out the WinScan780 Demo, while it's a little qurkey, it seems to work OK. MUCH better then 'dialing' in alpha tags letter by letter. It will only let you program bank 1 in the demo, and the demo only runs 30 min at a time and expires in 30 days. Lame. I've already pre-ordered the software, I feel I should be able to have access to a full beta until the final ships. Oh well.

Thats all I can think of right now. Back to scanning! :)

It would be more helpful if you told what kind of digital data. Sometimes all you need is the sound card input to the computer. There is a circuit called the hamcom interface that is mainly a simple IC op amp that runs at full gain to convert the signal to an input for a serial port.

Look here for some info on the digital signals and interfacing.

I could not agree with this posting more. This person has hit every point right on the nose. Unfortunately, I DID NOT do my research and was duped into getting VERIZON, (It was Bell Atlantic when I signed up) , and have regretted it ever since. Broadband access is great when it works, but the VERIZON service is as bad is the person has illustrated and then some. If I was not so addicted to the high speed access, I would've dumped it and gone back to 56K long ago, but alas, I endure the aggravation, patienty waiting for cable service to come to my cable system.
There should be a class action lawsuit filed against VERIZON for the way it has marketed DSL and treated it's customers.

You can just enter in 0.000 or enter a new freq in the channel number.

The problem is Dan, the level of service be it DSL or Cable modem varies greatly not only from state to state but city to city. Here in Tacoma my Adsl with US West was pretty good and @Home has been fine. I can drive 15 or less and find totally the opposite opinions. It all depends where you live. The only constant in the whole thing is you have to do your research if you don't want to pretend you are in Las Vegas at the crap table. I know from experience that very few of our local small time ISP can produce even close to the big boys regardless of what they say. Research and asking on your local newsgroup. Most major areas have a nameofthecity.general. Good chance of getting the real low down there.

Should be faster but isn't always. It all depends where you live and how many people are on your leg of the system. DSL doesn't share bandwidth like cable. BTW, many DSL systems are always connected, that isn't something that just cable can do.

5206. Openness Headline Update 123000

Newsgroup: rec.radio.scanner
Date: 2000-12-31 05:12:08 UTC
From: David Pinero <davidpin@pobox.com>
Message-ID: <voft4tcqghhj2k5koas4ui5i2bos8hipko@4ax.com>
Source record: 73350
Cross-posted to: alt.law-enforcement,alt.radio.scanner,rec.radio.scanner,alt.radio.broadcasting.open

The following information was posted today at the Openness website located at www.openness.org. The site is an advocate stage for the advancement of open public safety communication systems. If you are concerned about losing access to public safety communications in your community, make yourself a part of this campaign today. Newstips, links, and other information can be mailed directly to davidpin@pobox.com:

POLICE SCANNERS GAIN FOCUS IN MATTER OF THE TEXAS HOUDINI GANG

This is just one of two major releases by mainstream media today tying in the Dec. 15 robbery of a Radio Shack wherein police scanners were stolen, and the Christmas Eve robbery of an Oshmanï¿½s Super Sports USA where an Irving police officer was killed by members of the now-infamous 7-member Texas Houdini Gang. Unfortunately the coverage is not helping the cause of Open Broadcasting which advocates continued public access to certain police radio communications. The perception of Irving police outside the media is even worse, and frankly, the stories are not that reassuring. According to a release at the Irving police website, officer Aubry Hawkins arrived within 3 minutes of the call coming in that the robbery was taking place. In a Dec. 29 story of the assault, a Ft. Worth Star-Telegram article reported that fellow officers in Irving are positive that Hawkins was ambushed - citing multiple shots from different angles. Irving Texas is listed on one scanning information website as using an analog Ericsson EDACS trunked radio system. Other mainstream reports indicate that the officer was killed as the convicts were escaping - which is historically the deadliest point of encounter with law enforcement during any robbery, scanners or no scanners. Openness.org will be monitoring this story closely.

http://abcnews.go.com/sections/us/DailyNews/texas_criminals001229.html#1

BAD AND BOUGHT JOURNALISM FORM PARTNERSHIPS WITH PUBLIC SAFETY

It's all of Open Broadcasting fears come true! This essay, which appears at the Florida Law Enforcement Public Information Officers Association (FLEPIOA) website, masterfully reinforces the argument that public safety communication agreements doled exclusively out to "accredited" news houses deflates the watchdog institution of the media. The is a popular mantra of the Openness Campaign. Playing arbitrary politics with public access to information creates an incentive for corporate media institutes to "play ball" or get out of town. Aside from all this, the essay affirms why all those cheap "on your side" spots that corporate media loves to sell always focus on

small businesses and vulnerable arms of government rather than on the real antagonizers of consumerism (new car dealers, for example) or local public safety. Only open broadcasting and open systems level the playing field for everyone.

Hello Larry,
You might try the Uniden webpage at:
http://www.uniden.com/shhs_.html

Just last night I was looking at my scanner's instructions in the following pdf file. I was very impressed with the quality of the printouts.
http://www.uniden.com/pdf/BC235XLTom.pdf

I'm not sure about models and I don't see yours listed here but you may be able to use another model that is close to program yours.

I hope this helps.
-Brad

5208. AOR 8000 - Audio mod?

Newsgroup: rec.radio.scanner
Date: 2000-12-31 06:05:12 UTC
From: john1young@my-deja.com
Message-ID: <92mian$it5$1@nnrp1.deja.com>

Hello,

I own an AOR 8000. Very nice radio but one problem, the audio is too 'bassy' for typical FM reception. It sounds 'thick' as if the person talking has a cold.

Has anyone tried or would know of a simple way of adjusting the audio so it has a little more high end to the sound?

TNX

Hello,

I'd like to get a couple dead battery packs from the Uniden Bearcat BC2500XLT or BC3000XLT handheld scanners. They both take the same Ni-Cd pack, Uniden part no. BP2500. If you have one or more in good physical condition that will no longer take or hold a useful charge, please email me. See end of post for clue to get by my spamblock.

Donations preferred. I suppose I should offer to pay shipping, though. If I don't get any offers of donations I may give you a buck or two each.

Alan "A.J." Franzman

My real e-mail address does not compute.

5217. PRO-2052 Radio Monitoring Software

Newsgroup: rec.radio.scanner
Date: 2000-12-31 10:40:25 UTC

WinCAM is the newest and most user-friendly radio monitoring software on the market! It was designed especially for the RadioShack PRO-2052 Dual Trunking scanner. Some of it's key features includes:

- An easy to use interface for the novice or professional.
- A custom database which allows you to backup and restore all 1000 channels.
- Use Microsoft Access to modify your database.
- Automatically tune your scanner to a frequency in your database with a simple mouse click.
- Operates in Trunked, Conventional, Search and Scan modes.
- On/Off/Auto Mute Mode.
- Compatible with Microsoft Windows 95/98/2000/NT.
- Uses any COM port recognized by Windows.
- Operates at 2400, 4800, 9600 or 19200 bps.
- Export your frequency and channel database list to a file or printer.

The biggest use for decoding ctcss is to eliminate all transmissions that are not "encoded". Therefore you would only hear a cetain group. ctcss closes frequencies, not opens them. dtmf could possible help you identify the persons you may have heard while listening to a telephone conversation. I have some text files describing this ctcss if you need them. I also have a "glossary" useful understanding radio terms. e-mail direct if you want them = phwray@cros.net

Bill Seward wrote:

Beaker Dude may have actually said:

Donald Duck and Minnie Mouse

Donald Duck and Minnie Mouse were up in a hotel
room and decided that they wanted to have sex.
>
Well, the first thing Minnie asks is, "Do you have a
condom?"
>
Donald says "No."
>
Minnie tells Donald that if he doesn't get a condom
that they can't have sex and suggests to Donald that
he go buy a condom. She says that maybe they sell
them at the front desk.
>
Donald proceeds to go downstairs and gets to the
front desk. He asks the hotel clerk if they sell
condoms. The clerk says "yes we do" and pulls one
out from under the desk and gives it to Donald. The
clerk asks "Would you like me to put that on your
bill?"
>
Donald says "NO! I'M GOING TO F*** HER....NOT EAT HER!!!

5240. BC780 Mod instructions

Newsgroup: rec.radio.scanner
Date: 2000-12-31 19:32:26 UTC
From: "Rich Carlson, N9JIG" <rich@n9jig.com>
Message-ID: <rich-3E2C0D.13322631122000@news.theramp.net>
Source record: 73385

No, not THAT one, but much more useful and perfectly legal!

Everyone wants the Discriminator Mod for decoding various tones and signals. Don't like the way the 780 searches thru PL tones? Connect a PL decoder to the discriminator. Want to decode digital signals? RTTY? Connect to the discriminator.

Here are the easy instructions!

1) Open the case by removing all 8 side case screws. Carefully unplug the speaker from the main board.

2) Drill a 1/4th inch hole on the rear frame below the Tape Out jack. Do not drill thru the inside case member.

3) Mount a RCA phone jack (like those at Radio Shack) in the newly drilled hole.

4) Solder a 6 inch long small gauge wire to the center conductor of the new jack.

5) Route this wire between the circuit board and the frame just forward of the antenna connector.

6) Tack solder the far end of the wire to the circled solder pad on the top side of the board marked "LND14 FM Det. Out"

7) Reassemble the radio. Don't forget to reattach the speaker connector. (Doh!)

Now you can plug in your DC442, Data slicer, or other discriminator using device.

Enjoy!

I'm forwarding this from the ham NG, it's something we, as radio enthusiasts and scanner owners, can help with. Let's do our part to bring this criminals down before they kill anyone else. The news last night said that some of the escapees are Mexican, so some may head south. Or, they could head north on Interstate 35 into Oklahoma. Beyond that, who knows. Keep your ears open.

Subject: QST

I am KD5OM, Jerry Karlovich and I live in Plano, Texas. Unless you have been living in a cave the past couple of weeks you have heard of the seven prison escapees' that kill an Irving police officer Christmas Eve. The TV news reported that they also robbed a Radio Shack store in Houston earlier and made off with several types of hand held walkie talkie radios. That gave me an idea that I shared with the TDCJ (Texas Department of Criminal Justice) via their web site email http://people.txucom.net/tdcj-iad/
I just got off the telephone with Joe Nesmith of the TDCJ and they like my idea and
want me to pass this information along to radio amateurs in the area. Many of us including myself own scanners that will do limit searches. I thought if we, the amateur radio community, did some extra listening to our scanners, just maybe we could hear the convicts and assist in their capture. The radios stolen from the Radio Shack store were FRS (Family Radio Service) radios, business band radios, and amateur two meter talkies. The FRS Band channel

frequencies are:

Channel Frequency Channel Frequency
1 462.5625 8 467.5625
2 462.5875 9 467.5875
3 462.6125 10 467.6125
4 462.6375 11 467.6375
5 462.6625 12 467.6625
6 462.6875 13 467.6875
7 462.7125 14 467.7125

The business band radios that were stolen come pre program from the factory with the freq. of 156.400 mhz. although can be programmed to operate from 150 to 160 mhz. And we all know the amateur two meter band. If you hear what you might suspect to be the escapees', contact 911, officer Ricky Bort of the Pearland Police Department at 281-485-4361 office or 281-321-2156 pager. The Huntsville command center is operated 24/7 and can be reached at 936-437-6735 Officer Nesmith's pager is 1-800-299-4099 enter the pin number at the prompt of 6156 then enter your telephone number. You can find names and photos of the escapees' at http://people.txucom.net/tdcj-iad/
Wouldn't it be a good thing for us
if we were directly involved in assisting to capture these guys. And of course, common sense tells us DON'T PLAY WALKER RANGER
AND TRY TO CAPTURE THESE GUYS YOURSELF!!!!!

73, Jerry Karlovich, KD5OM

I have a few receivers I'm not using these days and would like to sell.

Cubic R3030A dual HF receiver: two HF receivers in one Military
rack-mount. Very very nice super high quality HF receivers. I can send
an info page scanned from Jane's Military Communications to anyone
interested that can receive a .jpg by email.

like new condition: $2200

Icom R7100 wideband scanning receiver. No gaps, full coverage from
25MHz to 2000MHz. Full cellular coverage. This is the improved version
of the venerable R7000 but more sensitive, better features and actually
is a decent scanner unlike the R7000.

like new condition: $1100

Buyer pays shipping

>I was wondering if anyone could help me with pilot lingo.

Go to the nearest small airport where they rent planes and teach people to fly. Buy a copy of the Airman's Information Manual (it's often combined with the Federal Aviation Regulations) for about $15. It will have tons of useful information in it.
If there is no flight shop near you Sporty's (www.sportys.com) has everything you will need, including videos on VFR and IFR pilot communications. Request a copy of their free catalog.
